ABSTRACT

This inventory presents the status and pumpage of all permitted, certificated, claims of vested groundwater rights, and exempt domestic wells located within Tracy Segment, Hydrographic Basin 6-083, for water year 2017 (October 1, 2016 through September 30, 2017). Also included for summary purposes are graphs and data associated with this use.

The data presented are valid for the period of this report and may vary from previously published figures as water rights within the basin are subject to administrative action, such as certification, cancellation, forfeiture, or withdrawal on a continual basis.

For water year 2017, the committed groundwater resource totaled 12,693 acre-feet, with estimated pumpage of **5,238 acre-feet**. This includes an estimated 730 acre-feet pumped by exempt domestic wells.

Municipal/quasi-municipal is the largest manner of use in the basin. For water year 2017, pumpage for municipal/quasi-municipal use totaled 3,331 acre-feet and appropriations of 7,812 acre-feet. The second largest manner of use was industrial with total pumpage of 1,046 acre-feet and appropriations of 1,693 acre-feet.

HYDROGRAPHIC BASIN SUMMARY

HYDROGRAPHIC BASIN NUMBER	083, REGION 6
HYDROGRAPHIC BASIN NAME	TRACY SEGMENT
COUNTIES	STOREY, WASHOE, LYON
MAJOR COMMUNITIES	LOCKWOOD, WADSWORTH
DESIGNATED	YES
DENIALS BASED UPON WATER AVAILABILITY	IRRIGATION, QUASI-MUNICIPAL
GROUNDWATER LEVEL MEASUREMENTS	NONE
PUMPAGE INVENTORY, ACRE-FEET IN 2017	5,238 ¹

STATE ENGINEER'S ORDERS
[NO. 705 – DESIGNATION](#)

DATE: MARCH 1, 1978

COMMITTED GROUNDWATER RESOURCE ² : 12,693 ACRE-FEET	DATE: SEPTEMBER 2019
COMMERCIAL 405	DOMESTIC 1,460
STOCKWATER 25	INDUSTRIAL 1,693
QUASI-MUNICIPAL/ MUNICIPAL 7,812	IRRIGATION 642
	MINING & MILLING...656

¹ Includes pumpage by exempt domestic wells, as defined by NRS 534.013.

² Committed groundwater resource data are accurate for September 2019. Manner of use category totals vary over time, as rights are not static. Rights may be subject to change applications, certification, relinquishments, withdrawals, forfeiture and cancellations; each of these circumstances could affect the duty, diversion rate and acreage associated with a given right. The value associated with each manner of use category does not include the amount relinquished in support of domestic wells. A query of the NDWR Well Log Database indicates that 730 domestic wells existed in the basin during water year 2017. This query is assumed to represent both appropriations and exempt domestic wells. The committed domestic water resource is considered to be 2 acre-feet per domestic well, or 1,460 acre-feet annually.

PURPOSE AND SCOPE

The purpose of this report is to inventory all of the groundwater resources allocated and described by the Office of the State Engineer, Nevada Division of Water Resources (NDWR), and to estimate the amount of groundwater pumped within Tracy Segment during water year 2017. This report estimates the amount of groundwater pumped under the permits and certificates issued by the State Engineer, claims of vested right, as well as the amount pumped by exempt domestic wells within the basin.

DESCRIPTION OF THE STUDY AREA

Tracy Segment is located in northwest Nevada and lies wholly within the state. The basin occupies approximately 285 square miles and covers parts of Storey, Washoe, and Lyon Counties; the majority of the basin lies within Storey County (Figure 1).

Tracy Segment is bounded on the south by the Virginia Range and on the north by the Pah Rah Range. The adjacent hydrographic basins are Warm Springs Valley (6-084) to the north, Dodge Flat (6-082) to the northeast, Fernley Area (5-076) to the east, Churchill Valley (8-102) to the southeast, Dayton Valley (8-103) to the south, Truckee Meadows (6-087) to the west, and Spanish Springs Valley (6-085) to the northwest. The boundary of the Tracy Segment Hydrographic Basin is as described by Designation Order 705, issued by the Nevada State Engineer March 1, 1978.

The dominant hydrologic feature of Tracy Segment is the Truckee River. The Truckee River flows from its headwaters in the Sierra Nevada through the Truckee Canyon Segment, Truckee Meadows, Tracy Segment, and Dodge Flat before discharging to the terminal Pyramid Lake. The river flows from west to east through the Tracy Segment. Tributaries to the Truckee River in this basin are ephemeral, and only reach the river in times of high flow during run-off.

Streamflow in the Truckee River and tributary streams are measured by the United States Geological Survey (USGS) and various local government entities operating under the Truckee Meadows Operating Agreement, as managed by the Federal Water Master. USGS operates six streamflow gaging stations in Tracy Segment. Data from these gages can be accessed at <http://nevada.usgs.gov/>.

GROUNDWATER LEVELS

Depths to groundwater in the Tracy Segment are measured by NDWR at 14 sites. The following are the site names and links to the data for active sites (Figure 2):

083 N19 E22 12BCDA1	083 N19 E23 07ABAA1	083 N19 E23 17BCCA1
083 N20 E22 02ABAB1	083 N20 E22 26DCCC1	083 N20 E22 31DDDD1
083 N20 E22 32CAAA1	083 N20 E22 33DBAA1	083 N20 E22 34BDAA1
083 N20 E22 34CAAB1	083 N20 E22 35CBAC1	083 N20 E22 35DCAD1
083 N20 E22 36CDAA1	083 N20 E22 36CDAB5	

Additional water level measurements and site data can be obtained from NDWR website (<http://water.nv.gov>). The USGS also measures groundwater levels in the basin. These data are available from USGS website (<http://nevada.usgs.gov/>).

METHODS TO ESTIMATE PUMPAGE

One of the purposes of this report is to estimate the amount of groundwater pumped under vested claims, permits and certificates issued by the State Engineer, as well as the amount pumped by exempt domestic wells in the valley. Figure 3 shows percentage of groundwater pumped by manner of use; and Figure 4 compares groundwater commitments and estimated pumpage by manner of use. The following methods were used to arrive at the estimated pumpage:

- Where totalizing meters were in place, meter readings were taken and compared with previous data (if available).
- Where meters were not in place and the use was irrigation, pumpage was estimated by multiplying the number of hours the well was operated during the past year (determined from an hour meter reading or asking the water user) by the certificated diversion rate.
- Where there were no flow meters or other reliable options for estimating pumpage and the use was irrigation, pumpage was estimated by dividing the Net Irrigation Water Requirement (NIWR) for the crop grown by the efficiency of the irrigation method used, then multiplying by the number of acres irrigated. Irrigation efficiencies associated with three types of irrigation methods are pivot at 85%, wheel line or other hand moved sprinklers at 75%, and flood at 60%. The pumpage amount estimated by this method was limited by the duty of the permit. For places where the groundwater rights were supplemental to surface water, groundwater use was estimated using the NIWR method above, but adjusted based on available surface water for the year. Evapotranspiration and NIWR data by basin can be found on the NDWR website at: <http://water.nv.gov/Evapotranspiration.aspx>.
- Where meters were not present, previous data were not available, and the manner of use was not irrigation, pumpage was estimated by applying the annual duty associated with the certificate (if the water right was perfected), permit or claim, if the use was as described in the certificate, permit or claim. If the use was not as described in the certificate, permit or claim, a value was estimated based upon the circumstances of use for the subject year.
- Exempt domestic wells may be drilled and utilized where water service from a purveyor is not available. These types of wells do not require a permit from the State Engineer if

they do not pump more than 2 acre-feet per year as provided by Nevada Revised Statutes (NRS) [534.180](#). [NRS 534.013](#) defines this category of domestic use as follows: *“Domestic use or domestic purposes extends to culinary and household purposes directly related to a single family dwelling, including, without limitation, the watering of a family garden and lawn and the watering of livestock and any other domestic animals or household pets.”* The number of exempt domestic wells in the basin was determined by a query of the NDWR Well Log Database. The amount of water pumped by exempt domestic wells in the Tracy Segment is estimated to be 1 acre-foot per well, or 730 acre-feet.

TABLES

**APPENDIX A. TRACY SEGMENT 2017 GROUNDWATER PUMPAGE BY
APPLICATION NUMBER**

EXPLANATION OF COLUMN HEADINGS FOR GROUNDWATER PUMPAGE BY APPLICATION NUMBER

APP NO.	The file number of the Application to appropriate/change water.
SITE NAME	An ID assigned to each well, based on its geographic location. POC – Proof of Completion. “No POC Filed” indicates that no POC has been submitted to the Office of the State Engineer.
STATUS	Indicates the status of an application: Permit (PER), Certificated (CER), or a Claim of Vested Right (VST). If an application has been certificated, the Certificate number will be listed.
MOU	The manner of use of the appropriated water. COM – Commercial STK – Stock IRR – Irrigation MM – Mining and Milling QM – Quasi-Municipal IND – Industrial REC – Recreational DOM – Domestic
OWNER OF RECORD	The owner of the water right as recorded in the files of the State Engineer. A water right may have more than one owner of record.
QQ	The quarter quarter of the section in which the point of diversion is located.
QTR	The quarter of the section in which the point of diversion is located.
SEC	The section in which the point of diversion is located.
T	The township in which the point of diversion is located.
R	The range in which the point of diversion is located.
PER ACRES	The number of acres that are permitted to be irrigated.
DUTY (AF)	The number of acre-feet of water that the permittee may pump annually. One acre-foot equals 325,851 gallons.
SUPP ADJ	The amount of water that may be pumped in a given year, or season, as defined by the permit certificate, or claim of vested right. If there is a supplemental group, the amount of water listed is the total combined duty of the supplemental group.
DUTY USED	The amount of water used during the water year, in acre-feet, as determined by review of records and/or field investigation.
UNIT	Acre-feet annually (AFA) and acre-feet seasonally (AFS). AFS limits water usage to certain months of the year.
SUPP SRC	The source of the supplemental water; underground, or groundwater (UG), or Carson River (CR).
SUPP GW APP NO	The file number(s) of any supplemental groundwater appropriations.

METHOD The method used to estimate pumpage, or duty used.
E – The observed use during field investigation.
D – Duty.
R – Reported pumpage.
