ABSTRACT

This inventory presents the status and pumpage of all permitted, certificated, claims of vested groundwater rights, and exempt domestic wells located within Tracy Segment, Hydrographic Basin 6-083, for water year 2021 (October 1, 2020 through September 30, 2021). Also included for summary purposes are graphs and data associated with this use.

The data presented are valid for the period of this report and may vary from previously published figures as water rights within the basin are subject to administrative action, such as certification, cancellation, forfeiture, or withdrawal on a continual basis.

For water year 2021, the committed groundwater resource totaled 12,579 acre-feet, with estimated pumpage of **4,960 acre-feet**. This includes an estimated 774 acre-feet pumped by exempt domestic wells.

Municipal & quasi-municipal was the largest manner of use within the basin. For water year 2021, pumpage for municipal/quasi-municipal use totaled 3,209 acre-feet, with appropriations totaling 7,655 acre-feet. Pumpage includes an estimated 1,000 acre-feet of non-permitted quasi-municipal rights diverted by the Pyramid Lake Paiute Tribe. The second largest manner of use was industrial, with an estimated total pumpage of 900 acre-feet and appropriations totaling 1,728 acre-feet.

HYDROGRAPHIC BASIN SUMMARY

HYDROGRAPHIC BASIN NUMBER	083, REGION 6	
HYDROGRAPHIC BASIN NAME	TRACY SEGMENT	
COUNTIES	STOREY, WASHOE, LYON	
MAJOR COMMUNITIES	LOCKWOOD, WADSWORTH	
DESIGNATED	YES	
DENIALS BASED UPON WATER AVAILABILITY	IRRIGATION, QUASI-MUNICIPAL	
GROUNDWATER LEVEL MEASUREMENTS	TRI GID, USGS	
PUMPAGE INVENTORY, ACRE-FEET IN 2021	4,960 ¹	
STATE ENGINEER'S ORDERS NO. 705 – DESIGNATION	DATE: MARCH 1, 1978	
COMMITTED GROUNDWATER RESOURCE ^{2,3} : 12,579 ACRE-FEET	DATE: OCTOBER 2021	
COMMERCIAL 382	DOMESTIC 1,548	INDUSTRIAL..... 1,728
IRRIGATION..... 642	MINING & MILLING 596	MUNICIPAL 3,140
QUASI-MUNICIPAL 4,515	STOCKWATER..... 29	

¹ Includes pumpage by exempt domestic wells, as defined by NRS 534.013.

² Committed groundwater resource data are accurate for October 2021. Manner of use category totals vary over time, as rights are not static. Rights may be subject to change applications, certification, relinquishments, withdrawals, forfeiture, and cancellations; each of these circumstances could affect the duty, diversion rate, and acreage associated with a given right. The value associated with each manner of use category does not include the amount relinquished in support of domestic wells. A query of the NDWR Well Log Database indicates that 774 domestic wells existed in the basin during water year 2021. This query is assumed to represent both appropriations and exempt domestic wells. The committed domestic water resource is considered to be 2 acre-feet per domestic well, or 1,548 acre-feet annually.

³ Due to rounding, numbers presented in tables within this report may not add up precisely to the totals provided.

PURPOSE AND SCOPE

The purpose of this report is to inventory all of the groundwater resources allocated and described by the Office of the State Engineer, Nevada Division of Water Resources (NDWR), and to estimate the amount of groundwater pumped within Tracy Segment during water year 2021. This report estimates the amount of groundwater pumped under the permits and certificates issued by the State Engineer, claims of vested right, as well as the amount pumped by exempt domestic wells within the basin.

DESCRIPTION OF THE STUDY AREA

Tracy Segment is located in northwest Nevada and lies wholly within the state. The basin occupies approximately 285 square miles and covers parts of Storey, Washoe, and Lyon Counties; the majority of the basin lies within Storey County (Figure 1).

Tracy Segment is bounded on the south by the Virginia Range and on the north by the Pah Rah Range. The adjacent hydrographic basins are Warm Springs Valley (6-084) to the north, Dodge Flat (6-082) to the northeast, Fernley Area (5-076) to the east, Churchill Valley (8-102) to the southeast, Dayton Valley (8-103) to the south, Truckee Meadows (6-087) to the west, and Spanish Springs Valley (6-085) to the northwest. The boundary of the Tracy Segment Hydrographic Basin is as described by Designation Order 705, issued by the Nevada State Engineer March 1, 1978.

The dominant hydrologic feature of Tracy Segment is the Truckee River. The Truckee River flows from its headwaters in the Sierra Nevada through the Truckee Canyon Segment, Truckee Meadows, Tracy Segment, and Dodge Flat before discharging to the terminal Pyramid Lake. The river flows from west to east through the Tracy Segment. Tributaries to the Truckee River in this basin are ephemeral and only reach the river in times of high flow.

Streamflow in the Truckee River and tributary streams are measured by the United States Geological Survey (USGS) and various local government entities operating under the Truckee River Operating Agreement (TROA), as managed by the Federal Water Master. USGS operates six streamflow gaging stations in Tracy Segment. Data from these gages can be accessed at <http://nevada.usgs.gov/>.

GROUNDWATER LEVELS

Depths to groundwater in Tracy Segment are not measured by NDWR but are reported by other entities. Data for active monitoring well sites (Figure 2) can be found on NDWR's website at <http://water.nv.gov/WaterLevelData.aspx>, or via the Nevada Hydrology Data Mapping Application, accessible at <http://water.nv.gov/mapping.aspx>. Groundwater level data are also collected by the USGS at various locations across the state and may be accessed through their website at <https://waterdata.usgs.gov/nv/nwis/gw>.

METHODS TO ESTIMATE PUMPAGE

One of the purposes of this report is to estimate the amount of groundwater pumped under vested claims, permits, and certificates issued by the State Engineer, as well as the amount pumped by exempt domestic wells in the valley. Table 1 and Figure 3 show historical pumpage by manner of use; Figure 4 shows the percentage of water pumped by manner of use; and Figure 5 compares groundwater commitments and estimated pumpage by manner of use. The following methods were used to arrive at the estimated use:

- Where totalizing meters were in place, meter readings were taken and compared with previous data (if available).
- Where meters were not in place and the use was irrigation, pumpage was estimated by multiplying the number of hours the well was operated during the past year (determined from an hour meter reading or asking the water user) by the certificated diversion rate.
- Where there were no flow meters or other reliable options for estimating pumpage and the use was irrigation, pumpage was estimated by dividing the Net Irrigation Water Requirement (NIWR) for the crop grown by the efficiency of the irrigation method used, then multiplying by the number of acres irrigated. Irrigation efficiencies associated with three types of irrigation methods are pivot at 85%, wheel line or other hand moved sprinklers at 75%, and flood at 60%. The pumpage amount estimated by this method was limited by the duty of the permit. For places where the groundwater rights were supplemental to surface water, groundwater use was estimated using the NIWR method above, but adjusted based on available surface water for the year. Evapotranspiration and NIWR data by basin can be found on the NDWR website at: <http://water.nv.gov/Evapotranspiration.aspx>.
- Where meters were not present, previous data were not available, and the manner of use was not irrigation, pumpage was estimated by applying the annual duty associated with the certificate (if the water right was perfected), permit, or claim, if the use was as described in the certificate, permit, or claim. If the use was not as described in the certificate, permit, or claim, a value was estimated based upon the circumstances of use for the subject year.
- Exempt domestic wells may be drilled and utilized where water service from a purveyor is not available. These types of wells do not require a permit from the State Engineer if they do not pump more than 2 acre-feet per year as provided by Nevada Revised Statutes (NRS) [534.180](#). [NRS 534.013](#) defines this category of domestic use as follows: *“Domestic use or domestic purposes extends to culinary and household purposes directly related to a single family dwelling, including, without limitation, the watering of a family garden and lawn and the watering of livestock and any other domestic animals or household pets.”* The number of exempt domestic wells in the basin was determined by a query of the NDWR Well Log Database. The amount of water pumped by exempt domestic wells is estimated to be 1 acre-foot per well in Tracy Segment, or 774 acre-feet.

TABLES

Table 1. Tracy Segment historical pumpage (acre-feet) by water year.

YEAR	COM	DOM	IND	IRR	MM	MUN/QM	STK	TOTAL
2017	117	730	1,046	0	5	3,331	9	5,238

**APPENDIX A. TRACY SEGMENT 2021 GROUNDWATER PUMPAGE BY
APPLICATION NUMBER**

EXPLANATION OF COLUMN HEADINGS FOR GROUNDWATER PUMPAGE BY APPLICATION NUMBER

APP NO.	The file number of the Application or the Vested Claim of Right.
SITE NAME	An ID assigned to each well, based on its geographic location.
STATUS	Indicates if the file is a permit (PER), claim of vested right (VST), or if it has been certificated. For certificated applications, the certificate number will be listed in the column.
MOU	The manner of use of the appropriated water. MOU's may include: COM - Commercial CON - Construction DOM - Domestic ENV - Environmental IND - Industrial IRR - Irrigation MM - Mining & Milling MUN - Municipal OTH - Other PWR - Power QM - Quasi-Municipal REC - Recreation STK - Stockwater STO - Storage WLD - Wildlife
OWNER OF RECORD	The owner of the water right as recorded in the files of the State Engineer. A water right may have more than one owner of record.
QQ	The quarter quarter of the Section in which the point of diversion is located.
Qtr	The quarter of the Section in which the point of diversion is located.
Sec	The Section in which the point of diversion is located.
T	The Township in which the point of diversion is located.
R	The Range in which the point of diversion is located.
PER. ACRES	The number of acres that are permitted to be irrigated.
DUTY (AF)	The number of acre-feet of water that the permittee may pump as defined by the permit, certificate, or claim of vested right. One acre-foot equals 325,851 gallons.
SUPP ADJ	The total combined duty of a supplemental group. Where more than one permit is appurtenant to the same place of use, the permits are considered supplemental. Permits may be either completely or partially supplemental.
DUTY USED	The amount of water used during the reporting period, in acre-feet, as determined by review of records and/or field investigation. A "--" in this field indicates that pumpage was attributed to another permit that may be supplemental or located at the same site.
UNIT	Acre-feet annually (AFA) and acre-feet seasonally (AFS). AFS limits water usage to certain months of the year.
SUPP SRC	When more than one source is appurtenant to the same place of use, the sources are considered supplemental. A "Y" in this column signifies the groundwater right is supplemental to other groundwater rights.
SUPP GW APP NO.	The file number(s) of any supplemental groundwater appropriations.

- METHOD The method used to estimate pumpage, or duty used.
- D – Duty.
 - E – Estimated use based on field investigation observations.
 - M – Meter reading on a totalizing meter.
 - N – Acreage multiplied by the Net Irrigation Water Requirement (NIWR) for the crop grown in the basin divided by the efficiency of the irrigation method.
 - P – Water from the point of diversion not delivered to the place of use.
 - R – Reported pumpage.
 - X – Works of diversion are unequipped or non-functioning.
 - Z – Works of diversion not yet constructed.
