Automatic Traffic Recorder (ATR) System -----	3
Vehicle Classification & 18 Kip Equivalent Single Axle Load Templates	4
Automatic Traffic Recorder (ATR) Summaries -----	12
Annual Average Daily Traffic Count Stations (Ten year history and maps) -----	107

INTRODUCTION

The administration of approximately 5,400 miles of roads in the State of Nevada Highway System involves the expenditure of hundreds of millions of dollars annually for construction, reconstruction and maintenance. Also, it imposes the responsibility of selecting and designing new roads, and the planning of future construction and development.

It is necessary to keep current data on motor vehicle trends for numerous reasons including: Design of new construction to service the volume and type of traffic a roadway will carry. Selection of new routes to serve the greatest area and maximum number of motorists while maintaining cost efficiency. Design of future projects to coincide with expected development and to schedule maintenance when and where it is most needed.

Perhaps the single most reliable statistics available to guide the highway engineer and the planner are the type and volume of traffic on each section of highway under consideration for future improvement. Responsibility for the collection, tabulation and analysis of these trends is vested in the Traffic Information Division of the Nevada Department of Transportation.

During 2010, hourly traffic volumes were monitored continuously at 94 locations statewide. These sites commonly referred to as Automatic Traffic Recorders (ATR's) are presented in summary form beginning on page 12 of this report. In addition, traffic volumes were collected in short periods (7days) and factored to Annual Average Daily Traffic (AADT's). These summary statistics including a ten-year history (if available) are presented by county in the Annual Average Daily Traffic Count Stations portion of this report, which begins on page 107.

STATISTICS

The methods used to derive the “Annual Average Daily Traffic” (AADT) for the Automatic Traffic Recorder (ATR) sites in this book are:

1. Each day of the week is averaged for the month.
2. The seven average days (Sunday through Saturday) are averaged which provides “Monthly Average Daily Traffic” (MADT).
3. The twelve MADT’s (January through December) are averaged, which then yields the AADT.

The methods used to derive the “Annual Average Daily Traffic” for Annual Average Daily Traffic Count Station section in this report are:

1. The total raw count from a five to seven day short period count is divided by the number of hours sampled and the quotient is then multiplied by 24 (24 hours in a day).
2. The above product is then factored using summary statistics from ATR’s to derive a Monthly Average Daily Traffic (MADT).
3. The MADT is once again factored for seasonality using summary statistics from ATR’s which produces Annual Average Daily Traffic (AADT). The AADT summary statistics in this report represent a composite of both directions.
4. Those locations sampled with an axle sensor are then factored once more using factors developed from vehicle classification statistics. This procedure factors out inflated counts due to extra axle vehicles.

Data is collected in an hourly increment at all count locations statewide. This data is available upon request from the Traffic Information Division staff by calling at (775) 888-7157.

ANNUAL AVERAGE DAILY TRAFFIC AT PORTABLE COUNT STATIONS NUMBERING SYSTEM

The Annual Average Daily Traffic Count Station section of this report contains a ten-year history of Annual Average Daily Traffic at portable (short-term) count locations. This data is divided into counties including maps depicting individual count locations. Short-term count locations are represented on the maps in red and consist of the four- digit identification number with all leading zeros removed. All short-term count locations are listed with the county three digit code and the four-digit station identifier in a table located directly adjunct to the individual county map.

	<u>Depicted on map</u>	Depicted in Table 3
Example of table three: Clark county station number	1	0030001
Mineral county station number	33	0210033
Washoe county station number	114	0310114

*Please note count stations in Clark County in the 2000 series numbers are counts provided by the Regional Transportation Commission and count stations in the 6000 series numbers are counts provided by the City of North Las Vegas. In addition to the short-term locations, Automatic Traffic Recorder (ATR) locations are indicated on the maps in red with seven-digit identification number. Please note that an AADT for ATR is found only in the Automatic Traffic Recorder (ATR) section of the Traffic Manual.

Below is a listing of the counties and their prefix numbers. County code numbers are in bold print and located in the upper right hand corner on all county maps.

<u>County</u>	<u>Prefix Number</u>
Carson City	025
Churchill	001
Clark	003
Douglas	005
Elko	007
Esmeralda	009
Eureka	011
Humboldt	013
Lander	015
Lincoln	017
Lyon	019
Mineral	021
Nye	023
Pershing	027
Storey	029
Washoe	031
White Pine	033

AUTOMATIC TRAFFIC RECORDERS (ATR)

In addition to the short-term locations, Automatic Traffic Recorder (ATR) locations are indicated on the maps in red with seven-digit identification number. Please note that an AADT for ATR is found only in the Automatic Traffic Recorder (ATR) section of the Traffic Manual.

Summary data for ATR sites can be found in the Automatic Traffic Recorder section of this report. The ATR section provides the user with Monthly Average Daily Traffic (MADT) and a 10-year history of the AADT with the percent of change from the previous year. This section also provides Average Daily Traffic (ADT), Average Weekday Traffic and Average Weekend Traffic. (Please note Friday ADT is not used to calculate Average Weekday or Weekend Traffic). A 10-year AADT history for all ATR's can also be located in the Annual Average Daily Traffic Count Stations section for each County.

The percent design hour volume (DHV) is of the AADT is provided in the ATR summaries and is a tool used in the design process. It is the hour used to design a highway as it represents the highest volume the highway will have to accommodate. To a greater extent, the design hour volume determines pavement widths and other geometric features.

2010

Vehicle Classification Distribution Report

By Route

Compiled by
Nevada Department of Transportation
Traffic Information Division
1263 S. Stewart St.
Carson City, NV 89712

Printed
April 2011

PREFACE

This Annual Average Day Vehicle Classification Distribution Report presents Vehicle Classification distributions by roadway segment for the majority of the State Maintained Highway System. The roadway segments are considered to be homogeneous in nature with regard to truck volumes. Truck volumes for each segment of roadway represented herein were taken at a point within the segment which also corresponds to a location where a traffic volume count is conducted annually. Each location where Vehicle Classification is conducted may represent multiple traffic volume count locations. The data collection is in direct conjunction with the Nevada Department of Transportation, Traffic Information Divisions Annual Traffic data collection plan.

Each Segment of roadway is identified by its' begin and end point in two different manners.

1. Physical location (example: CA / NV Stateline)
2. County mile point (example : CL 0.00)

Data is collected using one of several methods.

1. Permanent Continuous Weigh In Motion (WIM) – (up to 365 days per year 24 hours per day)
2. Permanent Continuous Automatic Vehicle Classification (AVC) – (up to 365 day per year 24 hours per day)
3. Short Term AVC – (up to 7 continuous days 24 hours per day)
4. Manual Classification – (24 continuous hours, [by Manual Observation])

Vehicle Classification distributions are based on number of axles as defined by the Federal Highway Administration (FHWA).

Annual Average Day Vehicle Classification Distribution volumes for continuous sites are calculated by taking the total volume of data for each vehicle type collected, dividing by the number of days of data collected (up to 365). Short Term or Manual Classification Annual Average Day Vehicle Classification Distribution volume calculations are made by taking the total volume of data collected daily by vehicle type, and factoring them for seasonality and Day of Week using factors derived from individual or groupings of permanent count /class locations to represent an “Average Day” condition.

The “Year of Data” column indicates the last time data was collected in the segment, an “E” in the column indicates that data collection was last done prior to 2001 and therefore the data is estimated based primarily on the adjacent segments data.

Some segments in this report show no data at this time. This is due to adding locations which prior to 2011 were not being collected. This report is expected to be dynamic in that it likely will expand in scope as we determine the need for vehicle classification data collection on routes which heretofore we have not collected data. We may also determine that consecutive segments of roadway are actually homogeneous allowing for eliminating data collection at some sites.

For more detailed information or for vehicle classification data on routes not covered in this report please contact:

Nevada Department of Transportation,
Traffic Information Division
Vehicle Size and Weight Manager
(775) 888-7442.
