Table of Contents -----	ii
Introduction -----	iii
Statistics -----	1
Traffic Count Station Numbering System -----	2
Automatic Traffic Recorder (ATR) System -----	3
Vehicle Classification Distribution Report -----	4
Seasonal Growth Factors -----	14
Automatic Traffic Recorder (ATR) Summaries -----	22
Annual Average Daily Traffic Count Stations (Ten year history and maps) -----	117

INTRODUCTION

The administration of approximately 5,400 miles of roads in the State of Nevada Highway System involves the expenditure of hundreds of millions of dollars annually for construction, reconstruction, and maintenance. Also, it imposes the responsibility of selecting and designing new roads, and the planning of future construction and development.

It is necessary to keep current data on motor vehicle trends for numerous reasons including: Design of new construction to service the volume and type of traffic a roadway will carry. Selection of new routes to serve the greatest area and maximum number of motorists while maintaining cost efficiency. Design of future projects to coincide with expected development and to schedule maintenance when and where it is most needed.

Perhaps the single most reliable statistics available to guide the highway engineer and the planner are the type and volume of traffic on each section of highway under consideration for future improvement. Responsibility for the collection, tabulation and analysis of these trends is vested in the Traffic Information Division of the Nevada Department of Transportation.

During 2023, hourly traffic volumes were monitored continuously at 104 locations statewide. These sites commonly referred to as Automatic Traffic Recorders (ATR's) are presented in summary form beginning on page 22 of this report. In addition, traffic volumes were collected in short periods (7days) and factored to Annual Average Daily Traffic (AADT's). These summary statistics including a ten-year history (if available) are presented by county in the Annual Average Daily Traffic Count Stations portion of this report, which begins on page 118.

STATISTICS

The methods used to derive the “Annual Average Daily Traffic” (AADT) for the Automatic Traffic Recorder (ATR) sites in this book are:

1. Each day of the week is averaged for the month.
2. The seven average days (Sunday through Saturday) are averaged which provides “Monthly Average Daily Traffic” (MADT).
3. The twelve MADT’s (January through December) are averaged, which then yields the AADT.

The methods used to derive the “Annual Average Daily Traffic” for Annual Average Daily Traffic Count Station section in this report are:

1. The total raw count from a five to seven-day short period count is divided by the number of hours sampled and the quotient is then multiplied by 24 (24 hours in a day).
2. The above product is then factored using summary statistics from ATR’s to derive a Monthly Average Daily Traffic (MADT).
3. The MADT is once again factored for seasonality using summary statistics from ATR’s which produces Annual Average Daily Traffic (AADT). The AADT summary statistics in this report represent a composite of both directions.
4. Those locations sampled with an axle sensor are then factored once more using factors developed from vehicle classification statistics. This procedure factors out inflated counts due to extra axle vehicles.

Data is collected in an hourly increment at all count locations statewide. This data is available upon request from the Traffic Information Division staff by calling at (775) 888-7156.

ANNUAL AVERAGE DAILY TRAFFIC AT PORTABLE COUNT STATIONS NUMBERING SYSTEM

The Annual Average Daily Traffic Count Station section of this report contains a ten-year history of Annual Average Daily Traffic at portable (short-term) count locations. This data is divided into counties including maps depicting individual count locations. Short-term count locations are represented on the maps in red and consist of the four- digit identification number with all leading zeros removed. All short-term count locations are listed with the county three digit code and the four-digit station identifier in a table located directly adjunct to the individual county map.

	<u>Depicted on map</u>	Depicted in Table 3
Example of table three: Clark county station number	0001	0030001
Mineral county station number	0033	0210033
Washoe county station number	0114	0310114

*Please note count stations in Lyon County that have 1000 series numbers are counts provided by Lyon County. In addition to the short-term locations, Automatic Traffic Recorder (ATR) locations are indicated on the maps in blue with a four-digit identification number. Please note that an AADT for ATR's is found only in the Automatic Traffic Recorder (ATR) section of the Traffic Manual. Below is a listing of the counties and their prefix numbers. County code numbers are in bold print and located in the upper right-hand corner on all county maps.

<u>County</u>	<u>Prefix Number</u>
Carson City	025
Churchill	001
Clark	003
Douglas	005
Elko	007
Esmeralda	009
Eureka	011
Humboldt	013
Lander	015
Lincoln	017
Lyon	019
Mineral	021
Nye	023
Pershing	027
Storey	029
Washoe	031
White Pine	033

AUTOMATIC TRAFFIC RECORDERS (ATR)

In addition to the short-term locations, Automatic Traffic Recorder (ATR) locations are indicated on the maps in blue with a four-digit identification number. Please note that an AADT for an ATR is found only in the Automatic Traffic Recorder (ATR) section of the Traffic Manual. Use the three digit county code number as the prefix to the four digit blue number to locate the desired ATR in the ATR section. Example 007 (Elko county code) 5260 (ATR number) =0075260.

Summary data for ATR sites can be found in the Automatic Traffic Recorder section of this report. The ATR section provides the user with Monthly Average Daily Traffic (MADT) and a 10-year history of the AADT with the percent of change from the previous year. This section also provides Average Daily Traffic (ADT), Average Weekday Traffic and Average Weekend Traffic. (Please note Friday ADT is not used to calculate Average Weekday or Weekend Traffic).

The percent design hour volume (DHV) of the AADT is provided in the ATR summaries and is a tool used in the design process. It is the hour used to design a highway as it represents the highest volume the highway will have to accommodate. To a greater extent, the design hour volume determines pavement widths and other geometric features.

2023

Vehicle Classification Distribution Report

By Route

Compiled by
Nevada Department of Transportation
Traffic Information Division
1263 S. Stewart St.
Carson City, NV 89712

Printed June
2024

The data collection provided is in direct conjunction with the Nevada Department of Transportation, Traffic Information Division's Annual Traffic data collection plan.

Each Segment of roadway is identified by a "Begin and End" point in two different manners.

1. From and To Physical location (example: CA / NV Stateline)
2. County mile point (example : CL 0.00)

Data is collected using one of the following methods:

1. Permanent Continuous Weigh In Motion (WIM) – (up to 365 days per year 24 hours per day)
2. Permanent Continuous Automatic Vehicle Classification (AVC) – (up to 365 day per year 24 hours per day)
3. Short Term AVC – (up to 7 continuous days 24 hours per day)
4. Manual Classification – (24 to 48 continuous hours, [by manual observation])

Vehicle Classification distributions are based on number of axles as defined by the Federal Highway Administration (FHWA).

The “Year of Data” column indicates the last time data was collected in the segment. An “E” in the column indicates that data collection was last done prior to 2019. Therefore the data is estimated based primarily on the adjacent segments data.

Some segments in this report show no data at this time. This is due to adding locations which prior to 2023 were not being collected. This report is expected to be dynamic, it likely will expand in scope as we determine the need for vehicle classification data collection on routes which we have not collected data. We may also determine that consecutive segments of roadway are actually homogeneous, allowing for the elimination of data collection at some sites.

For more detailed information, or for vehicle classification data on routes not covered in this report please contact:

Nevada Department of Transportation,
Traffic Information Division
Vehicle Size and Weight Manager
(775) 888-7536.
