The old and obsolete sets of Harper's Grammars, Webster's Spellers, and Swinton's Geography have been discarded and replaced by the regular series used in all the Nevada city and graded schools.

Arithmetic is the basis of all gradation in studies in the school, and particular attention is paid to the mental work and written analysis of problems. One-half of the arithmetic work is from the pupil's text books; the other half consists of supplementary problems from other works, and good common sense, every day, practical problems propounded in the class for solution and demonstration.

LETTER WRITING.

This very important, but much neglected and abused branch of English, is made a regular study from the second to the sixth grades. The pupils are drilled and practiced in the writing and composition of all the various letter forms, most especially those of business and the ordinary family and friendship letters. They send letters to relatives and friends once each month, and are encouraged in writing and sending business letters and orders for themselves.

HOME LIBRARY.

To the home library, in the past six months, have been added the Encyclopedia Britannica in twenty-five volumes, and a few volumes donated by friends. This should be the initiatory step to a laudable work—that of filling the bookcases with an entire new set of books; and I would take this opportunity of urging upon the Honorable Board the advisability of providing the children of this institution with a supply of books suited to their tastes and comprehension. The reading of good books is in itself a great education.

About 400 volumes may be counted now in the home library, of which probably no more than 150 volumes are actually readable, and these latter are rapidly becoming not such from the wear and tear naturally resulting from their constant reading by the pupils. Almost all the books are old and much worn, having been donated second-hand, and a very great many of them are far from being books adapted to a children's library.

During the past year a great interest in and desire for reading has been strongly manifested by the pupils. Many of them have read, all or most all, the good books in the library, and now, like Oliver Twist, they are eagerly "asking for more."

Cannot such hunger be appeased?

In the education of these boys and girls, more than in any others, there should be ever present in our minds that our highest and truest aim should be progress, not push; profit, not per cent.; and substance, not show.

Most respectfully yours,

ANNA SUMMERFIELD,

Teacher.

REPORT.

To the Honorable Board of Directors of the State Orphans' Home :

I herewith hand you a statement of the monthly and yearly expenses of the State Orphans' Home for the years 1891-92. I have arranged this statement in tables, so that it may be seen what it costs monthly to support the institution. Table No. 1 shows the monthly and yearly expenses for the years 1891-92.

TABLE NO. 6.*Showing the amount of milk and butter produced during 1891-92.*

During 1891 we have milked an average of six cows, two Holsteins, one Durham, two common and one half-breed cows. The average yield of milk during the year was fifteen gallons per day for 365 days, making 5,475 gallons. At 30 cents per gallon would be \$1,642 50. The average yield of butter per week was fifteen

pounds, making 780 pounds for the year. At 25 cents per pound would be \$195. Adding the price of the milk and butter for the year gives the following result for 1891:

Milk.....	\$1,642 50
Butter.....	195 00
Cash received for sale of stock.....	91 40
Total.....	\$1,828 90
Deducting the expenses of live stock (see live stock column, table No. 1).....	253 40
Deducting this amount from the proceeds of the milk and butter leaves a net profit of.....	\$1,575 50

During 1892 we have milked an average of seven cows, two Holsteins, two half breeds, one Durham and two common cows. The average yield of milk per day was sixteen gallons for 365 days, making 5,840 gallons. At 30 cents per gallon this would be \$1,752. The average yield of butter per week was seventeen pounds, making 884 pounds for the year. At 25 cents per pound this would be \$221. Adding the price of the milk and butter for the year gives the following result for 1892:

Milk.....	\$1,752 00
Butter.....	221 00
Cash received for sale of stock.....	18 00
Total.....	\$1,991 00
Deducting the expense of the live stock (see live stock column, table No. 1).....	430 85
Deducting this from the proceeds of the milk and butter leaves a net profit of.....	\$1,560 15
Profit for 1891.....	1,575 50
Total profit for 1891-92.....	\$3,135 65

You will notice there has been a large increase of children, from the ages of two months up to five years. We have had thirteen, all too young to attend school, and found it necessary to employ a nurse in order to give them proper care. There has been one death during the past two years. Louis Muran died March 4, 1891, of heart disease. The children at present are all in good health. During the past two years we have had ten cases of scarlet fever of a mild form, one severe case of diphtheria, and one case of brain fever. The sanitary condition of the Home I consider good. The children are all contented and seem well pleased with their home.

The school at the Home is in a flourishing condition. The teacher, Miss Anna Summerfield, is a young lady of rare qualifications for the position. The children are making good progress in their studies under her careful tuition. While there have been a great many repairs made in the last two years, there are still numerous repairs needed in order to keep the house and grounds in proper order.

In conclusion, I would suggest to the Board of Directors to recommend an appropriation sufficient to supply the Home with

pipes and fixtures for the introduction of gas; also pipes to convey water for irrigation purposes. At present we lose one-quarter of the water by running it through ditches, the ground absorbing it, as we only get water twice a week.

Very respectfully,

R. GRIMMON,

Superintendent.
