

Exports In Nevada

August 6, 2012

Matthew van den Berg, Economist

Total Nevada Exports

- Nevada's exports to the rest of the world have shown steady growth since 2009. Total exports have experienced an average annual growth rate of 13.8% over the last three years.
- The growth is largely attributed to the high prices of precious metals and ores produced by Nevada's mining and primary metals industries. Precious metals and other ore exports accounted for 60% of the value of all Nevada exports in 2011.
- Following precious metals and ores, electronic machinery, game machines, measuring, checking and medical instruments, and machinery and mechanical appliances round out the top five export categories by value.
- Due to the gold trade, Switzerland is Nevada's leading international trading partner by value, accounting for 46.6% of total exports.
