Nevada Rural and Frontier Health Data Book

Introduction: Health and Health Care in Rural and Frontier Nevada

The *Nevada Rural and Frontier Health Data Book* – 2011 Edition contains a wide range of current information on the resident population, economy and social environment, population health, and the health care delivery system in rural and frontier regions of Nevada. It includes important data for public policy makers, health care professionals and administrators, rural health care advocates, and, importantly, the residents of rural and frontier Nevada. The primary purpose of the data book is to provide the most current and accurate data for these audiences, as well as for those interested in learning more about health and health care in Nevada.

Utilizing a number of existing public and private data sources and data sets, most of the information contained in the data book is presented at the county level. Most of the tables also provide data aggregated at the regional level to highlight important, general distinctions between rural and urban regions of the state. In some cases, the only available data is regional in nature (e.g., prevalence of behavioral risk factors to health). In other instances, the data values for individual rural and frontier counties are small and thus suppressed by the data-collecting agency for confidentiality or other reasons (e.g., cause-specific mortality rates at the county level). Regardless, the expressed intent of this publication is to highlight important differences among urban, rural, and frontier areas of the state.

It should also be noted that, with the state's ever-changing demography, economy, and health care delivery system, some of the data are in flux and, thus, must be treated with caution. In some cases, the information is not updated on a regular basis. Equally important, as this edition of the data book goes to press, the state and nation are in the middle of a severe economic recession. Consequently, the "most current" available data likely understates county and regional trends (e.g., unemployment rates, uninsured estimates). Nonetheless, all of the information presented in this volume is, to our best knowledge, the most current available.

The *Nevada Rural and Frontier Health Data Book* – 2011 Edition is divided into five major sections containing the most current data on:

- Demographic characteristics of rural and frontier Nevada, including recent population estimates and projections;
- The social and economic characteristics of rural and frontier Nevada, including data on income, poverty, and educational attainment;

- Population health status and health insurance coverage in rural and frontier Nevada;
- The health care workforce in rural and frontier Nevada, including estimates and projections for many licensed health care occupations across the major regions of the state; and
- Health care resources and the economics of health care in rural and frontier Nevada.

The majority of tables contained in the data book are organized into two broad categories: (1) rural and frontier counties and (2) urban counties. The “rural and frontier counties” category includes two rural counties (Douglas and Storey Counties). It also includes twelve frontier counties (Churchill, Elko, Esmeralda, Eureka, Humboldt, Lander, Lincoln, Lyon, Mineral, Nye, Pershing, and White Pine Counties) per the consensus definition of “frontier counties” developed by the National Center for Frontier Communities (NCFC). The “urban counties” category includes Carson City, and Clark and Washoe Counties. In some of the tables presented in the data book, data are aggregated in terms of three regions of the state: (1) Clark County, (2) Washoe County, and (3) “balance of state”. In these instances, data for “balance of state” has been labeled “rural and frontier” with the acknowledgment that it includes the urban county of Carson City. This tripartite aggregation of data is the manner in which many state agencies have historically collected and presented data.

Provider-to-population ratios, insurance enrollment rates, and other population-based ratios and calculations utilize county- and state-level population estimates certified by the Nevada State Demographer’s Office for any given year. Some of the population estimates presented in the data book and utilized in the aforementioned denominators vary slightly from those published later in the same year. Numbers and percentages presented throughout the data book may not add up due to rounding. All dollar figures and estimates are in current dollars and have not been adjusted for inflation. The data sources and notes for the information presented in the data book are contained in the book’s bibliography, data sources, references, and notes.

The data presented in the *Nevada Rural and Frontier Health Data Book – 2011 Edition* spotlight important differences among rural, urban, and frontier areas of Nevada. Indeed, the premise of this and previous versions of the data book is that characteristics distinguishing urban from rural and frontier areas have important impacts on population health, the availability of hospital and other health care resources, and access to health care services.

For example, the age distribution of a county has a significant influence on the health status and health care needs of a population. The age distribution of a county also affects the type

and amount of resources available to local residents (e.g., number and percent of Medicare-eligible residents, proportion of county income from Social Security and other transfer payments).

All things being equal, rural counties tend to have an older population than urban counties. An older population, in turn, is typically at a greater risk of death and disability than a younger population, and uses a disproportionately larger share of health care resources. In general, urban, rural and frontier areas possess important differences in demographics, economics, and social characteristics, which produce differences in health priorities, population health, health related behaviors, the delivery of health services, and access to health care. For example, research has consistently documented higher levels of obesity and smoking prevalence, lower levels of health insurance coverage, and greater barriers to accessing health care services in non-metropolitan versus metropolitan areas. It is thus not surprising that non-metropolitan areas have significantly higher age-adjusted all-cause mortality rates and cause-specific mortality rates than metropolitan areas (North Carolina Rural Health Research and Policy Analysis Center, 2010).

Defining Rural and Frontier

The definition of what is and is not a “rural” area is no mere academic matter. Indeed, policy makers utilize different, and in some cases competing, classification schemes to target programs, services, and projects to populations in Nevada and the United States. Figure 1 provides a taxonomy of the major classification schemes developed over the past couple of decades to distinguish what is and is not a rural region, as well as variation among Nevada counties in their being considered rural depending on the classification scheme used. The table also provides 2010 population estimates for each county certified by the Nevada State Demographer’s office.

The two principal definitions of rural used by the federal government to guide health policy are the Office of Management and Budget’s (OMB) “metropolitan/micropolitan/non-metropolitan” system and the Bureau of Census’s “urban-rural” classification of populations. The identification of areas as “urban” versus “rural” or “metropolitan” versus “non-metropolitan” is important, since the way in which a county is defined or designated determines an area’s eligibility for state and federal health programs and, thus, the allocation of health care resources.

Figure 1: Taxonomy of Rural Classification Schemes and Distribution of Nevada Population by Place

County	Estimated Population – 2010	Office of Management and Budget	Census Bureau – 2000 Census	National Frontier Communities Center	Census Bureau – Projected 2010 US Census
Carson City	55,188	Metropolitan	Urban	Urban	Urban
Churchill	26,357	Micropolitan	Rural	Frontier	Rural
Clark	1,902,502	Metropolitan	Urban	Urban	Urban
Douglas	50,355	Micropolitan	Rural	Rural	Urban
Elko	52,042	Micropolitan	Rural	Frontier	Urban
Esmeralda	1,158	Non-Metro	Rural	Frontier	Rural
Eureka	1,562	Micropolitan	Rural	Frontier	Rural
Humboldt	17,511	Non-Metro	Rural	Frontier	Rural
Lander	5,952	Non-Metro	Rural	Frontier	Rural
Lincoln	4,238	Non-Metro	Rural	Frontier	Rural
Lyon	52,470	Non-Metro	Rural	Frontier	Urban
Mineral	4,524	Non-Metro	Rural	Frontier	Rural
Nye	44,844	Micropolitan	Rural	Frontier	Rural
Pershing	7,069	Non-Metro	Rural	Frontier	Rural
Storey	4,148	Metropolitan	Rural	Rural	Rural
Washoe	402,001	Metropolitan	Urban	Urban	Urban
White Pine	9,495	Non-Metro	Rural	Frontier	Rural
Nevada – 17 Counties (Percent of State Population)	2,641,416	Metro: 4 (89.5%) Micro: 5 (6.6%) Non-Metro: 8 (3.9%)	Urban: 3 (89.3%) Rural: 14 (10.7%)	Urban: 3 (89.3%) Rural: 2 (2.1%) Frontier: 11 (8.6%)	Urban: 6 (95.2%) Rural: 11 (4.8%)

The original OMB classification system distinguished two broad types of areas: Metropolitan and non-metropolitan. Under the original scheme, metropolitan and non-metropolitan areas are defined at the county level by OMB. Basically, metropolitan areas consist of a core county with at least one city of 50,000 or more residents. A metropolitan area can also consist of a Census Bureau-defined urbanized area with a total population of 100,000 or more. The OMB also defines fringe counties that are economically tied to core counties as metropolitan (e.g., Storey County is economically tied to Washoe County and Carson City). The OMB defines those non-metropolitan counties lying outside the boundaries of metropolitan areas and have no cities of 50,000 or more residents as non-metropolitan areas. The OMB classification scheme has recently been updated to include a third type of county or region lying between non-metropolitan and metropolitan – micropolitan.

As compared to non-metropolitan areas, micropolitan areas are distinguished by closer economic ties to metropolitan counties and areas and comparatively larger populations (e.g., Churchill County is economically tied to Washoe County and Carson City). This revised classification attempts to incorporate the obvious “shades of grey” lying between metropolitan and non-metropolitan categories. Utilizing the new OMB methodology and 2010 population estimates, the state possesses four metropolitan counties with a combined population of 2,363,839, five micropolitan counties with a combined population of 175,160, and eight non-metropolitan counties with a combined population of 102,417.

The Census Bureau defines urban as comprising all territory, population, and housing units located in urbanized areas and adjacent places with at least 2,500 or more inhabitants outside of urbanized areas. Urban areas, in turn, are defined as a continuously built-up area with a population of 50,000 or more. All territories, populations, and housing units that the Census Bureau does not classify as urban are essentially classified as rural. Using this classification scheme and 2010 population estimates, the state would be divided into three Census-designated urban counties with a combined population of 2,359,691 and fourteen rural counties with a combined population of 281,725.

The distribution of Nevada population into “urban” and “rural” areas may change dramatically as a result of the 2010 national census with possibly four counties (Douglas, Elko, Lyon, and Nye) exceeding the 50,000 urban threshold in 2010. Using the Census Bureau’s urban-rural classification scheme and 2010 population estimates, the state would be divided into six urban counties with an estimated combined population of 2,514,558 (or 95.2 percent of the state’s population) and eleven rural counties with an estimated combined population of 126,858 (or 4.8 percent of the state’s population).

The classification scheme adopted by the Nevada Office of Rural Health and utilized in this edition of the *Nevada Rural and Frontier Health Data Book* emphasizes the important distinctions between “rural” and “frontier” regions of the state. This classification scheme was

developed by the National Center for Frontier Communities (NCFC) with input from state health planners and rural health professionals throughout the country. The Center's classification scheme distinguishes certain areas of the country as being more remote than rural areas as the latter are commonly understood. The Center's classification scheme represents an improvement over previous schemes which defined "frontier" simply in terms of population density, where counties with a population of density of 7 or less persons per square mile were defined as "frontier."

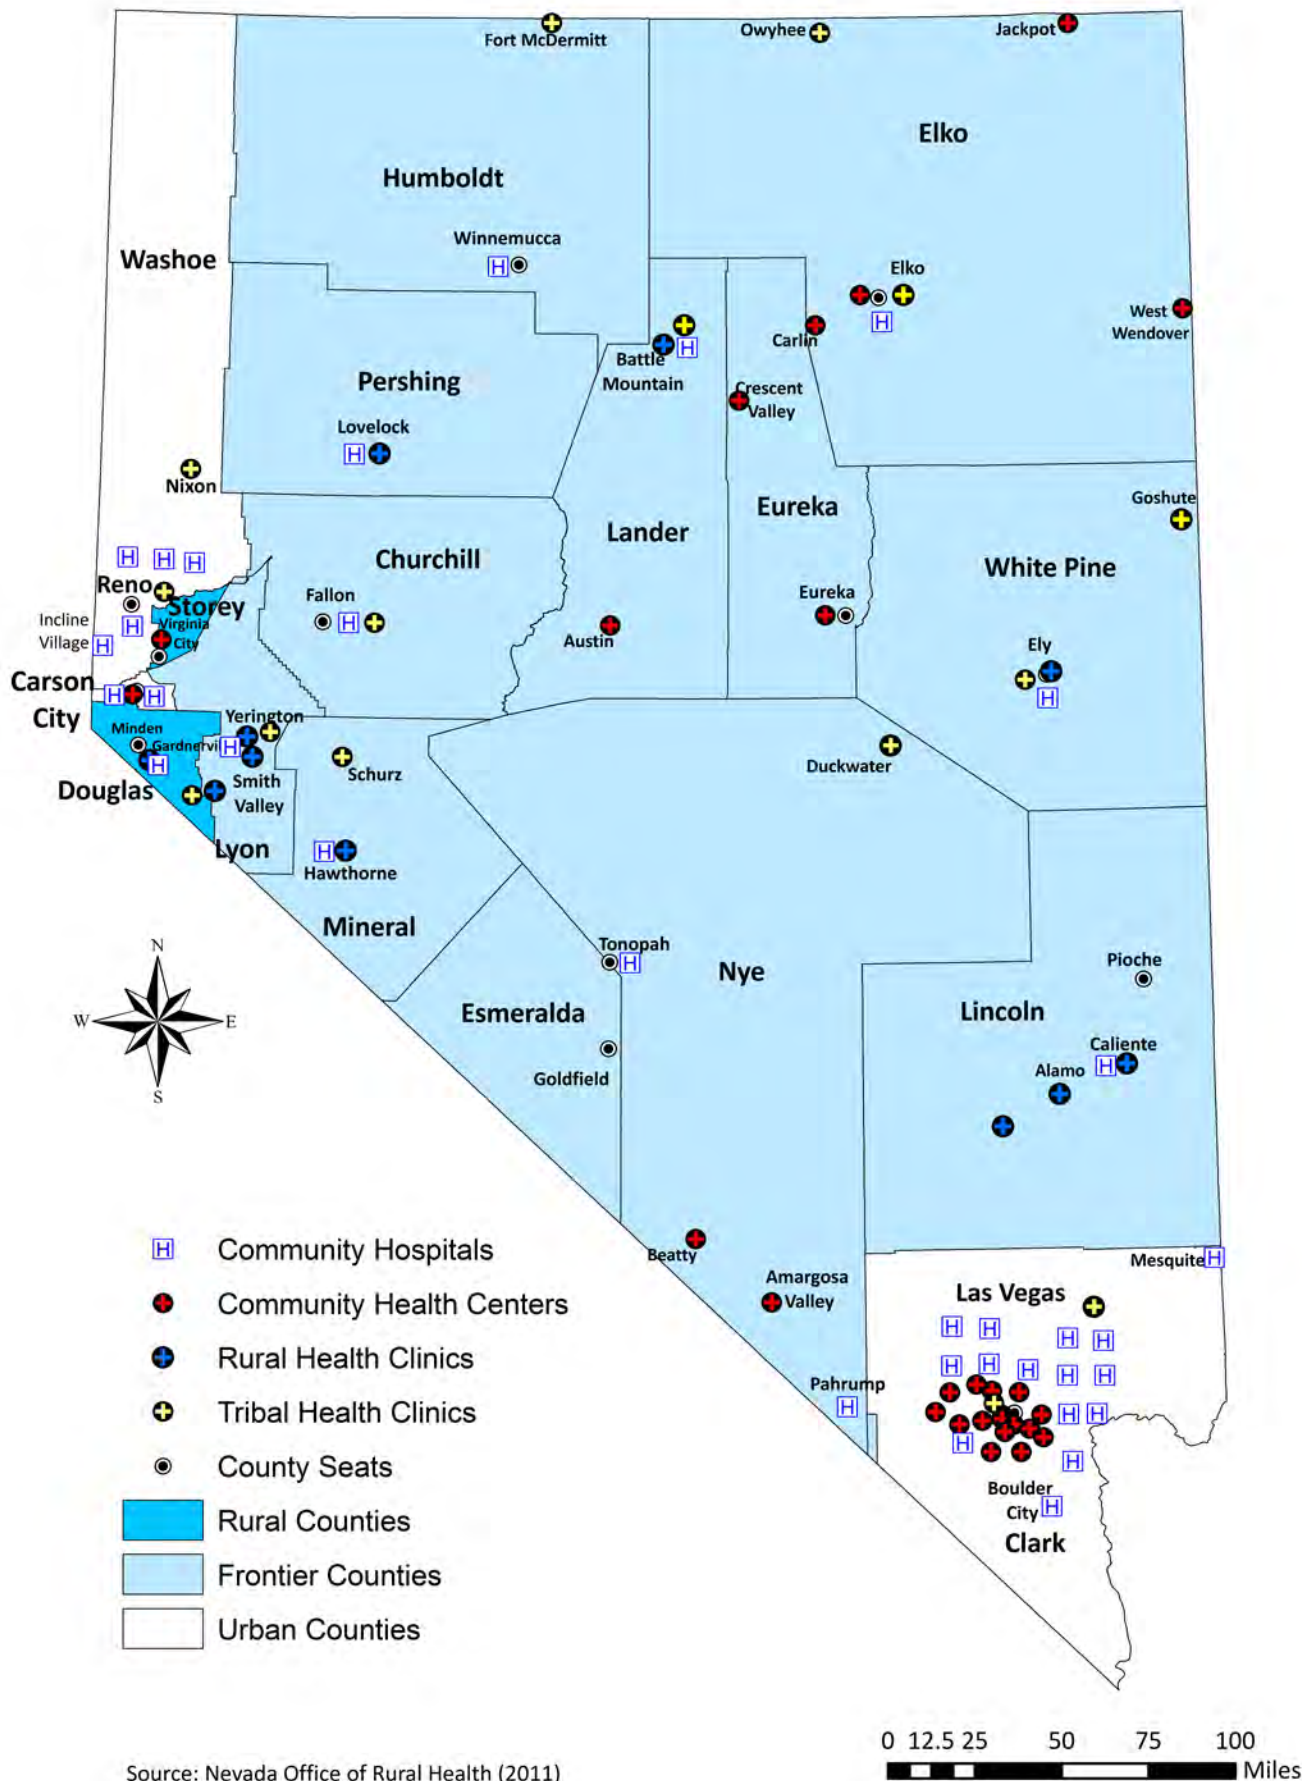

The NCFC definition of frontier utilizes a matrix tool that assesses an area's population density, and distance to tertiary health care services in terms of time and mileage. Point values for each of these criteria determine an area's designation as frontier. Frontier characteristics significantly affect the type of health care system that can be supported in isolated areas. The distinction between rural and frontier provides policy makers with a framework to consider how resource allocation decisions must take into account the factors which isolate communities from health services, and how these communities must address sustainability of the services their residents demand.

Ultimately, consideration of how frontier communities operate differently than rural and urban communities will improve the ability of federal, state, and local agencies to allocate resources and programs in a way that meets the needs of these remote areas. Utilizing the NCFC methodology and 2010 population estimates, the Nevada Office of Rural Health has determined that there are three urban counties in Nevada with a combined population of 2,359,691, two rural counties with a combined population of 54,503, and twelve frontier counties with a combined population of 227,222.

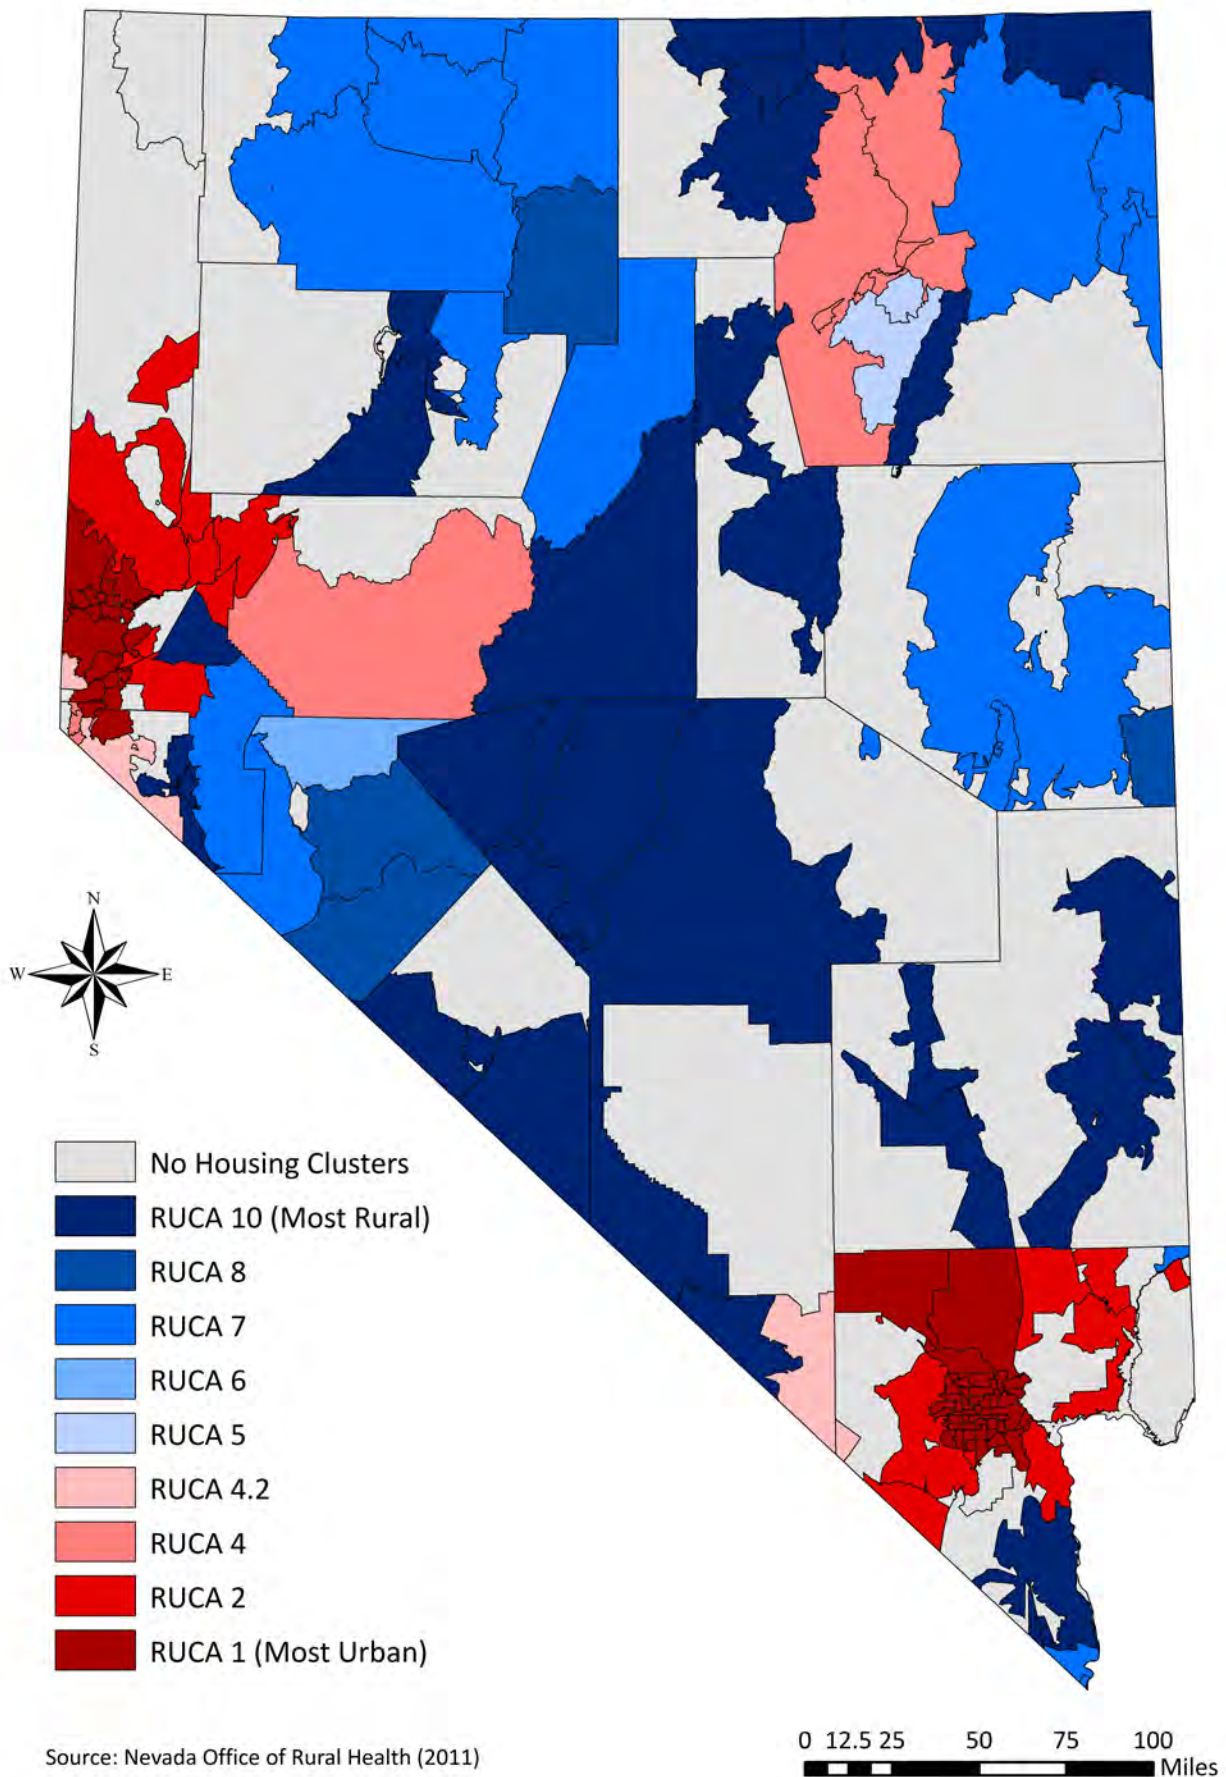

Rural and Frontier Nevada

Map 1 highlights the state's three urban counties, two rural counties, and the remaining twelve frontier counties. It also indicates the location of Nevada's major towns, cities, and county seats. According to 2010 population estimates prepared by the Nevada State Demographer's Office, 2,359,691 Nevadans or 89.3% of the state's population reside in the state's three urban counties. Approximately 72.0% of the state's population resides in Clark County (Las Vegas metropolitan area) alone and 15.2% lives in Washoe County (Reno-Sparks metropolitan area). In comparison, an estimated 281,725 Nevadans or 10.7% of Nevada's population reside in the state's rural and frontier counties. The rural and frontier population is spread over 95,431 square miles or 86.9% of the state's land mass.

by Rural-Urban Commuting Areas (RUCA)**

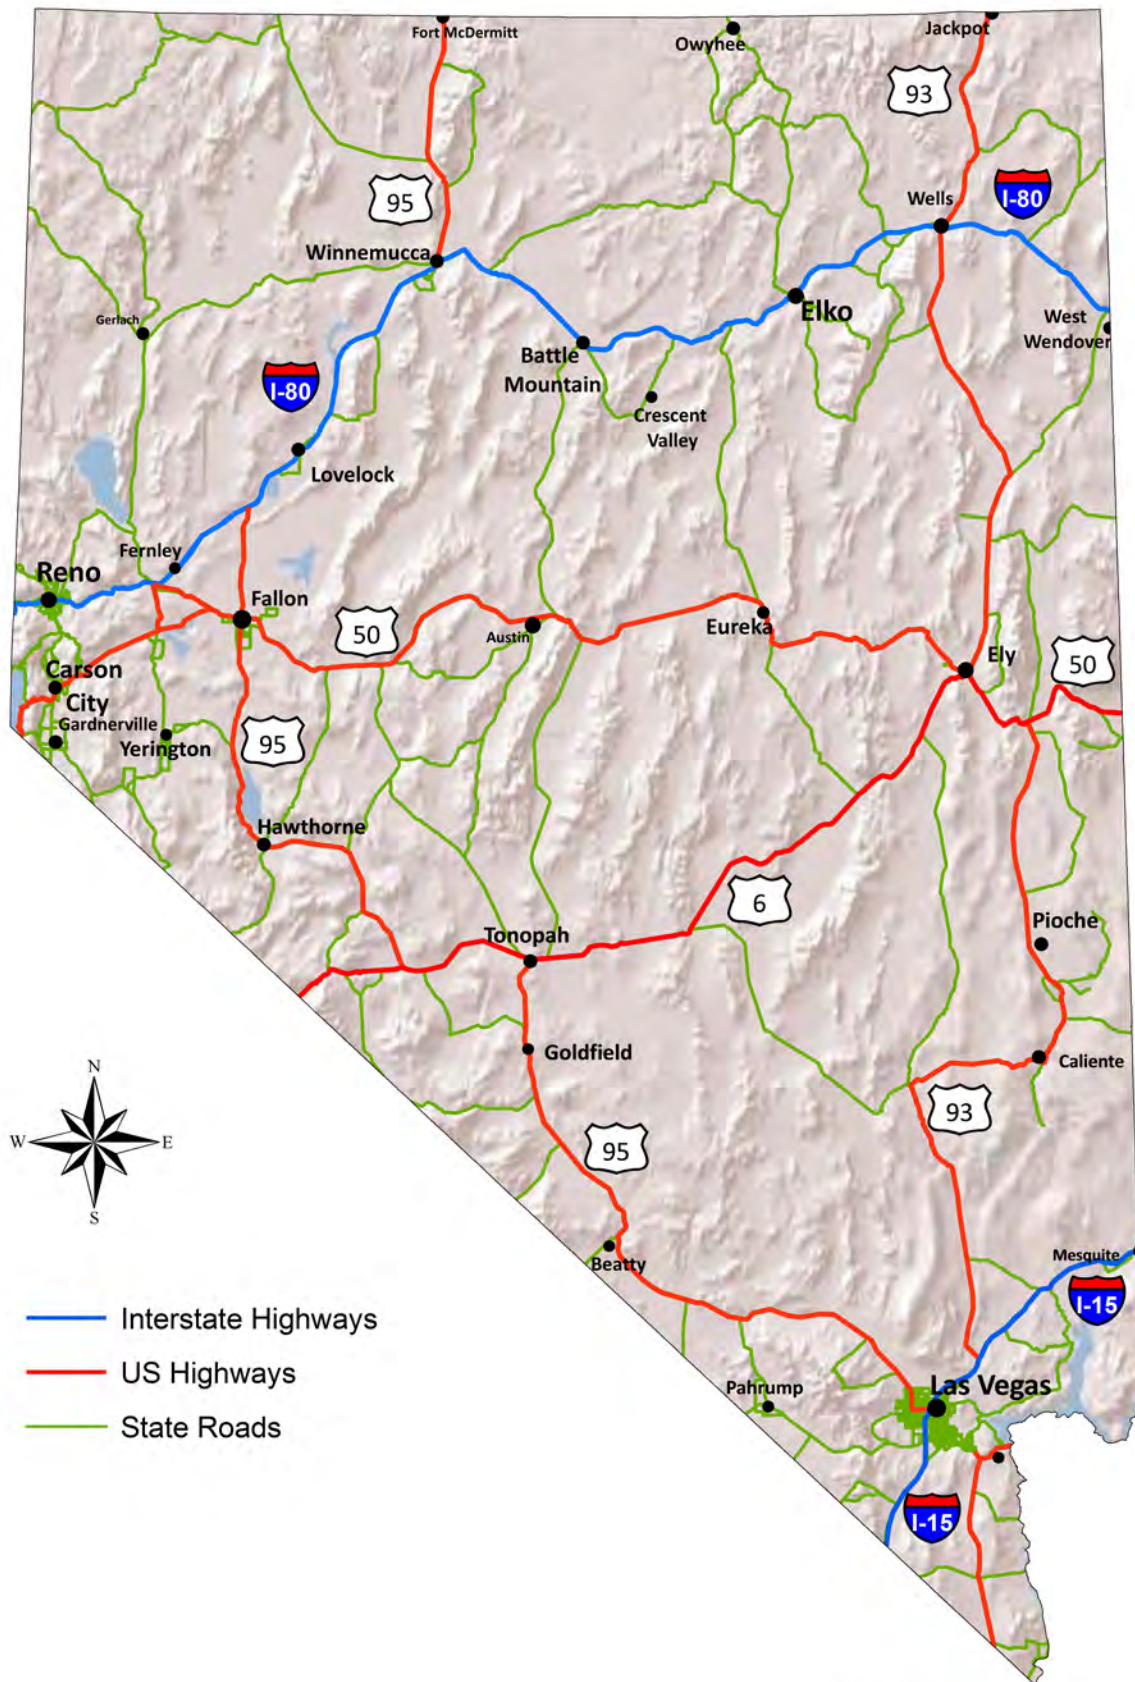

Map 3: Nevada Mileage Diagram

Source: Nevada Office of Rural Health (2011)

Map 4: Nevada Geography and Highway System

Source: Nevada Office of Rural Health (2011)

Map 1 also provides a current snapshot of the major health care services available to rural and frontier residents of Nevada (this map excludes the offices of individual physicians or other health providers). While most of the state's tertiary care centers are concentrated in the state's three urban counties, a large number of acute care hospital services, clinics and medical centers are scattered across each of the state's fourteen rural and frontier counties. These facilities and services – described in greater detail throughout this data book – provide most of the basic health care received by our state's rural and frontier populations.

Map 2 highlights the considerable heterogeneity of Nevada's population and geography utilizing "RUCA" codes ranging from 1 (the red shaded or core areas of urbanized areas) to 10 (the blue shaded, mostly rural/frontier, isolated areas of the state). Recent improvements in geographic information systems (GIS) have made it possible to refine our identification and understanding of urban and rural America. A key advancement has been the development of rural-urban commuting areas or "RUCAs" which provide a more fine-grained classification of rural areas applicable at both the county and sub-county (e.g., census tracts) units of analysis (Hart, Larson, and Lishner, 2005; WWAMI Rural Health Research Center, 2008).

RUCA analysis uses census commuting data to classify census tracts on the basis of geography and work commuting activity between places. A strength of the RUCA approach is its use of commuting data to differentiate rural areas according to their economic integration with urban areas and other rural areas. RUCAs thus treat rurality as a continuous variable rather than a dichotomous variable or residual category as do the other classification schemes, wherein "RUCAs range from the core areas of urbanized areas to isolated small rural places, where the population is less than 2,500 and where there is no meaningful work commuting to urbanized areas" (Hart, Larson, and Lishner, 2005, p. 1,153).

Map 2 underscores the concentration of most of the state's population in zip codes located in the northwestern and southern counties of the state (RUCAs 1-2), and the dispersion of the remainder of the state's population (approximately 10 percent or 250,000-275,000) across a vast geographic expanse of rural and frontier regions of the state (RUCAs 4-10). Map 2 also highlights the considerable variation within counties. For example, the urban counties of Washoe County and Clark County contain substantial areas that are rural or frontier in nature; conversely rural and frontier counties such as Lyon and Nye Counties possess comparatively urban areas or zip codes economically integrated with urban centers in the state.

Map 3 highlights the vast distances separating the state's rural communities from urban centers, as well as the considerable distances separating these communities from one another. Most of Nevada's rural and frontier communities are located in sparsely populated counties that are considerable distances from the state's urban and tertiary care centers. The average distance between acute care hospitals in rural Nevada and the next level of care or tertiary care hospital is 114.7 miles and the average distance to the nearest incorporated town is 46.5

miles. Consequently, the primary health care delivery issue for rural residents and communities in Nevada is how best to overcome the spatial isolation and enormous geographic distances that characterize most of rural and frontier Nevada.

The eleven towns in Nevada with federally-designated Critical Access Hospitals or “CAHs” are an average distance of 45.5 miles from the nearest incorporated town, an average of 54.4 miles from the next hospital, and an average of 104.8 miles from the next level of care or nearest tertiary care hospital. As such, Nevada’s eleven CAHs represent vital hubs in the state’s rural and frontier health care system, providing essential inpatient and 24/7 emergency care to nearly 300,000 residents of rural and frontier areas of the state.

Map 4 highlights Nevada’s unique topography. Nevada comprises the western half of our Nation’s Great Basin. Ridge after ridge of tall, rugged, brown mountains are broken up with flat sage covered valleys. The Great Basin is a high desert defined by rows of mountains running north to south, like stretch marks on the earth. The earth’s crust is stretched thin and earthquake activity is second only to Hawai’i. The mountains trap the water inside the basin. A hundred and fifty mountain ranges are scattered across the state. Most major roads follow the north to south pattern with two major exceptions. US Highway 50 – “the loneliest highway in America” – zigzags across the middle of the state winding through numerous mountain summits. Interstate 80 curves northeastwards across the state largely following the Humboldt River basin. Travel time from most county hospitals to regional medical centers is thus measured in hours not minutes.

Data Book Sections and Contents

The first section of the *Nevada Rural and Frontier Health Data Book – 2011* contains the most current data on the social and demographic characteristics of rural and frontier Nevada, including information on:

- Population and population density
- Population change and projections
- Population aging and diversification
- Population by place of birth
- Veterans in Nevada

Section two contains the most current data from state and federal agencies on the social and economic characteristics of rural and frontier Nevada, including data on:

- Personal and family income
- Poverty rates for children and adults
- Educational enrollment and public school expenditures

- Educational attainment and high school graduation rates
- Voter registration and party affiliation

Section three contains the most current data on population health and health insurance coverage in rural and frontier Nevada, including information on:

- Health insurance coverage and the uninsured
- Morbidity and mortality rates
- Teen pregnancy and birth rates
- Population health status and risk factors to health
- County health outcomes and health determinants rankings

Section four contains the most current data on the health care workforce in rural and frontier Nevada, including data on:

- Employment and unemployment
- Estimated hospital and health sector employment
- Health professional shortage and medically underserved areas
- Number and per capita geographic distribution of licensed health professionals
- Occupational projections for health care professionals

The fifth section of the book contains the most current data on health care facilities, health care resources, and economic aspects of health care in rural and frontier Nevada, including information on:

- Rural and frontier clinics, community health centers, tribal facilities, and Nevada's telehealth network
- Hospital employment and payroll
- Health sector employment and payroll
- Economic impact and contribution of hospitals and the health sector
- Utilization trends and financial performance among the state's rural and frontier hospitals and comparisons with urban facilities

The data sources, explanation of data tabulations, and notes on the strengths and weaknesses of the data presented for each table, figure, and map in the data book are contained in the book's appendices.

Acknowledgments

We would like to thank the numerous individuals, organizations, and agencies who assisted us in the preparation of the data book, and who endured our requests for data. In particular, we would like to acknowledge:

- Emily Brown, June Hunter and Alexandra Sigillo in the CEHSO office who assisted us with data entry, data review tasks, and final edits to this edition
- Keith Clark who provided the data book's cover photo
- Nevada State Health Division agencies who supplied much of the population health and health workforce data, in particular Alicia Hansen and her staff, Susanne Paulson, Sandra Noffsinger, Jane Countryman, VickiE Estes, and Connie McFadden
- Jeff Hardcastle, the Nevada State Demographer
- Steve Boline of Nevada Rural Hospital Partners
- Joseph Greenway and Danny Chan of the Center for Health Information Analysis at University of Nevada, Las Vegas
- Tom Harris and Elizabeth Fadali of the Center for Economic Development at the University of Nevada, Reno
- John Torres at the Nevada Department of Employment, Training, and Rehabilitation
- Cindy Salaun-Opperman from the Nevada Division of Health Care Financing and Policy
- Rory Chetelat at the Southern Nevada Health District for EMT health professions data
- Jody Sekerak at the Indian Health Services
- Paula Guzman of the Nevada Health Centers
- The nearly two dozen State of Nevada licensing boards for health professions data

The responsibility for any errors of omission or commission are ours alone. The preparation and distribution of this volume was made possible through funding received by the Nevada State Office of Rural Health from the Medicare Rural Hospital Flexibility Grant Program which is administered by the federal Office of Rural Health Policy (ORHP) and the Medical Education

Council of Nevada (MECON).

In closing, since health and health care in rural and frontier Nevada are ever-changing, our ambition is to continue to update and distribute this volume on a biennial basis. If your organization or agency utilizes the data book, we would appreciate learning more about how you have used it and how future editions can be improved. As such, please send your comments and suggestions, as well as requests for additional copies to Dr. John Packham at jpackham@medicine.nevada.edu.

Note: The term “Critical Access Hospital” or CAH refers to a Medicare hospital facility designation from the Centers for Medicare and Medicaid Services (CMS). This designation allows small rural and frontier hospitals to receive cost-based reimbursement for inpatient and outpatient services provided to Medicare beneficiaries. As of February 2009, there are ten certified CAHs and five CAH-eligible hospitals in Nevada. CAH and CAH-eligible hospitals receive financial and technical assistance from the Nevada Rural Hospital Flexibility Program. The Nevada Flex Program is a federally-supported program administered by the Nevada Office of Rural Health based at the University of Nevada School of Medicine.
