Nevada Rural and Frontier Health Data Book

Introduction: Health and Health Care in Rural and Frontier Nevada

The *Nevada Rural and Frontier Health Data Book – 2013 Edition* contains a wide range of current information on the resident population, economy and social environment, population health, and the health care delivery system in rural and frontier regions of Nevada. It includes important data for public policy makers, health care professionals and administrators, rural health care advocates, and, importantly, the residents of rural and frontier Nevada. The primary purpose of this data book is to provide the most current and accurate data for these audiences, as well as for those interested in learning more about health and health care in Nevada.

Utilizing a number of existing public and private data sources and data sets, most of the information contained in the data book is presented at the county level. Most of the tables provide data aggregated at the regional level to highlight important, general distinctions between rural and urban regions of the state. In some cases, the only available data is regional in nature (e.g., prevalence of behavioral risk factors to health). In other instances, the data counts for individual rural and frontier counties are too small and thus suppressed by the data-collecting agency for confidentiality or other reasons (e.g., cause-specific mortality rates at the county level). Regardless, the expressed intent of this publication is to highlight important differences among urban, rural, and frontier areas of the state.

It should also be noted that, with the state's ever-changing demography, economy, and health care delivery system, some of the data are in flux and, thus, must be approached with caution. In some cases, the information is not updated on a regular basis. Equally important, as this edition of the data book goes to press, the state continues to be in the middle of a severe economic contraction. Consequently, the "most current" available data likely understates county and regional trends (e.g., unemployment rates, uninsured estimates). Nonetheless, all of the information presented in this volume is, to our best knowledge, the most current available.

The *Nevada Rural and Frontier Health Data Book – 2013 Edition* is divided into five major sections containing the most current data on:

- Demographic characteristics of rural and frontier Nevada, including recent population estimates and projections;
- The social and economic characteristics of rural and frontier Nevada, including data on income, economic indicators, poverty, and educational attainment;

- Population health insurance coverage, health status, and vital statistics in rural and frontier Nevada;
- The health care workforce in rural and frontier Nevada, including estimates and projections for many licensed health care occupations across the major regions of the state; and
- Health care resources and the economics of health care in rural and frontier Nevada.

The majority of tables contained in the data book are organized into two broad categories: (1) rural and frontier counties and (2) urban counties. The “rural and frontier counties” category includes three rural counties (Douglas, Lyon, and Storey Counties). It also includes eleven frontier counties (Churchill, Elko, Esmeralda, Eureka, Humboldt, Lander, Lincoln, Mineral, Nye, Pershing, and White Pine Counties) per the consensus definition of “frontier counties” developed by the National Center for Frontier Communities (NCFC). The “urban counties” category includes Carson City, and Clark and Washoe Counties. In some of the tables presented in the data book, data are aggregated in terms of three regions of the state: (1) Clark County, (2) Washoe County, and (3) “balance of state”. Certain tables have data labeled “rural and frontier” which may include the urban county of Carson City if the county does not have a separate column heading. This tripartite aggregation of data is the manner in which many state agencies have historically collected and presented data.

Provider-to-population ratios, insurance enrollment rates, and other population-based ratios and calculations utilize county- and state-level population estimates certified by this Nevada State Demographer’s Office for any given year. Some of the population estimates presented in this data book and utilized in the aforementioned denominators vary slightly from those published later in the same year (see end note on Table 1.1). Numbers and percentages presented throughout the data book may not add up due to rounding. All dollar figures and estimates are in current US dollars and have not been adjusted for inflation. The data sources and notes for the information presented in this data book are contained in the book’s bibliography, table sources, references, and notes.

The data presented in the *Nevada Rural and Frontier Health Data Book – 2013 Edition* spotlight important differences among rural, urban, and frontier areas of Nevada. This biennial publication, (6th Edition), continues the presentation of data highlighting characteristics distinguishing urban from rural and frontier areas. These characteristics highlight important changes and impacts on population health, the availability of hospital and other health care resources, and access to health care services between rural and frontier and urban areas.

For example, the age distribution of a county has a significant influence on the health status and health care needs of a population. The age distribution of a county also affects the type and amount of resources available to local residents (e.g., number and percent of Medicare-eligible residents, proportion of county income from Social Security and other transfer payments).

All things being equal, rural counties tend to have an older population than urban counties. An older population, in turn, is typically at a greater risk of death and disability than a younger population, and uses a disproportionately larger share of health care resources. In general, urban, rural and frontier

areas possess important differences in demographics, economics, and social characteristics, which produce differences in health priorities, population health, health related behaviors, the delivery of health services, and access to health care. For example, research has consistently documented higher levels of obesity and smoking prevalence, lower levels of health insurance coverage, and greater barriers to accessing health care services in non-metropolitan versus metropolitan areas. It is thus not surprising that non-metropolitan areas have significantly higher age-adjusted all-cause mortality rates and cause-specific mortality rates than metropolitan areas (North Carolina Rural Health Research and Policy Analysis Center, 2010).

Defining Rural and Frontier

The definition of what is and is not a “rural” area is no mere academic matter. Indeed, policy makers utilize different, and in some cases competing, classification schemes to target programs, services, and projects to populations in Nevada and the United States. Figure 1 provides a taxonomy of the major classification schemes developed over the past couple of decades to distinguish what is and is not a rural region, as well as variation among Nevada counties in their being considered rural depending on the classification scheme used. The table also provides 2010 census estimates for each county certified by the Nevada State Demographer’s office.

The two principal definitions of rural used by the federal government to guide health policy are the Office of Management and Budget’s (OMB) “metropolitan/micropolitan/non-metropolitan” system and the Bureau of Census’s “urban-rural” classification of populations. The identification of areas as “urban” versus “rural” or “metropolitan” versus “non-metropolitan” is important, since the way in which a county is defined or designated determines an area’s eligibility for state and federal health programs and, thus, the allocation of health care resources.

The original OMB classification system distinguished two broad types of areas: Metropolitan and non-metropolitan. Under the original scheme, metropolitan and non-metropolitan areas are defined at the county level by OMB. Basically, metropolitan areas consist of a core county with at least one city of 50,000 or more residents. A metropolitan area can also consist of a Census Bureau-defined urbanized area with a total population of 100,000 or more. The OMB also defines fringe counties that are economically tied to core counties as metropolitan (e.g., Storey County is economically tied to Washoe County and Carson City). The OMB defines those non-metropolitan counties lying outside of the boundaries of metropolitan areas and has no cities of 50,000 or more residents as non-metropolitan areas. The OMB classification scheme has recently been updated to include a third type of county or region lying between non-metropolitan and metropolitan – micropolitan.

As compared to non-metropolitan areas, micropolitan areas are distinguished by closer economic ties to metropolitan counties and areas and comparatively larger populations (e.g., Churchill County is economically tied to Washoe County and Carson City). This revised classification attempts to incorporate the obvious “shades of grey” lying between metropolitan and non-metropolitan categories. Utilizing the new OMB methodology and 2010 national census population estimates, the state possesses four metropolitan counties with a combined population of 2,431,960, five micropolitan counties with a combined population of 166,625, and eight non-metropolitan counties with a combined population of 101,966.

Figure 1: Taxonomy of Rural Classification Schemes and Distribution of Nevada Population by Place

County	Census Population – 2010	Office of Management and Budget	Census Bureau – 2000 Census	National Center for Frontier Communities	Census Bureau – 2010 Census
Carson City	55,274	Metropolitan	Urban	Urban	Urban
Churchill	24,877	Micropolitan	Rural	Frontier	Rural
Clark	1,951,269	Metropolitan	Urban	Urban	Urban
Douglas	46,997	Micropolitan	Rural	Rural	Rural
Elko	48,818	Micropolitan	Rural	Frontier	Rural
Esmeralda	783	Non-Metro	Rural	Frontier	Rural
Eureka	1,987	Micropolitan	Rural	Frontier	Rural
Humboldt	16,528	Non-Metro	Rural	Frontier	Rural
Lander	5,775	Non-Metro	Rural	Frontier	Rural
Lincoln	5,345	Non-Metro	Rural	Frontier	Rural
Lyon	51,980	Non-Metro	Rural	Rural	Urban
Mineral	4,772	Non-Metro	Rural	Frontier	Rural
Nye	43,946	Micropolitan	Rural	Frontier	Rural
Pershing	6,753	Non-Metro	Rural	Frontier	Rural
Storey	4,010	Metropolitan	Rural	Rural	Rural
Washoe	421,407	Metropolitan	Urban	Urban	Urban
White Pine	10,030	Non-Metro	Rural	Frontier	Rural
Nevada – 17 Counties	2,700,551 (100% of State Population)	Metro: 4 (90.1%) Micro: 5 (6.2%) Non-Metro: 8 (3.8%)	Urban: 3 (89.9%) Rural: 14 (10.1%)	Urban: 3 (89.9%) Rural: 3 (3.8%) Frontier: 11 (6.3%)	Urban: 5 (91.8%) Rural: 12 (8.2%)

The Census Bureau defines urban as comprising all territory, population, and housing units located in urbanized areas and adjacent places with at least 2,500 or more inhabitants outside of urbanized areas. Urban areas, in turn, are defined as a continuously built-up area with a population of 50,000 or more. All territories, populations, and housing units that the Census Bureau does not classify as urban are essentially classified as rural. Using this classification scheme and current population estimates, the state would be divided into three Census-designated urban counties with a combined population of 2,427,950 and fourteen rural counties with a combined population of 272,601.

The distribution of Nevada population into “urban” and “rural” areas may change as a result of the 2010 national census with one county (Lyon) exceeding the 50,000 urban threshold in 2010. Using the Census Bureau’s urban-rural classification scheme and 2010 national census population estimates, the state would be divided into four urban counties with an estimated combined population of 2,479,930 (or 91.8 percent of the state’s population) and thirteen rural counties with an estimated combined population of 220,621 (or 8.2 percent of the state’s population).

The classification scheme adopted by the Nevada Office of Rural Health and utilized in this edition of the *Nevada Rural and Frontier Health Data Book* emphasizes the important distinctions between “rural” and “frontier” regions of the state. This classification scheme was developed by the National Center for Frontier Communities (NCFC) with input from state health planners and rural health professionals throughout the country. The Center’s classification scheme distinguishes certain areas of the country as being more remote than rural areas as the latter are commonly understood. The Center’s classification scheme represents an improvement over previous schemes which defined “frontier” simply in terms of population density, where counties with a population of density of 7 or less persons per square mile were defined as “frontier.”

The NCFC definition of frontier utilizes a matrix tool that assesses an area’s population density, and distance to tertiary health care services in terms of time and mileage. Point values for each of these criteria determine an area’s designation as frontier. Frontier characteristics significantly affect the type of health care system that can be supported in isolated areas. The distinction between rural and frontier provides policy makers with a framework to consider how resource allocation decisions must take into account the factors which isolate communities from health services, and how these communities must address sustainability of the services their residents demand.

Ultimately, consideration of how frontier communities operate differently than rural and urban communities will improve the ability of federal, state, and local agencies to allocate resources and programs in a way that meets the needs of these remote areas. Utilizing the NCFC methodology and 2010 national census population estimates, the Nevada Office of Rural Health has determined that there are three urban counties in Nevada with a combined population of 2,427,950, three rural counties with a combined population of 102,987, and eleven frontier counties with a combined population of 169,614.

Rural and Frontier Nevada

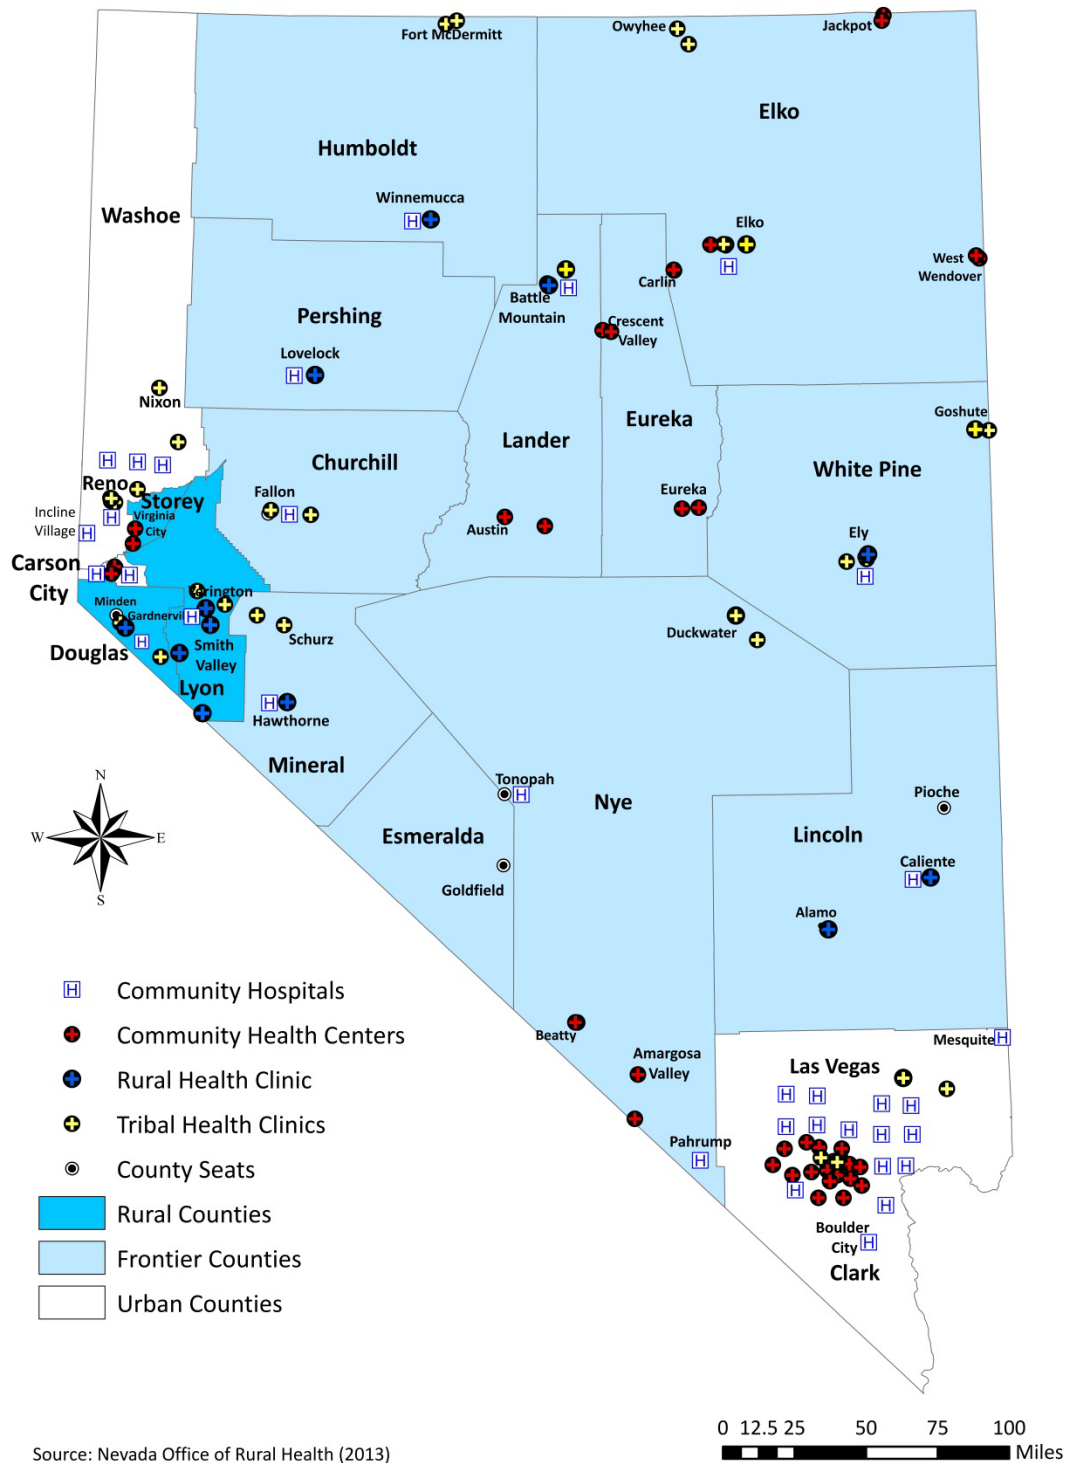

Map 1 highlights the state's three urban counties, three rural counties, and the remaining e frontier counties. It also indicates the location of Nevada's major towns, cities, and county seats. According to 2012 population estimates prepared by the Nevada State Demographer's Office, 2,359,691 Nevadans or 89.3% of the state's population reside in the state's three urban counties. Approximately 72.0% of the state's population resides in Clark County (Las Vegas metropolitan area) alone and 15.2% lives in Washoe County (Reno-Sparks metropolitan area). In comparison, an estimated 281,725 Nevadans or 10.7% of Nevada's population reside in the state's rural and frontier counties. The rural and frontier population is spread over 95,431 square miles or 86.9% of the state's land mass.

Map 1 also provides a current snapshot of the major health care services available to rural and frontier residents of Nevada (this map excludes the offices of individual physicians or other health providers). While most of the state's tertiary care centers are concentrated in the state's three urban counties, a large number of acute care hospital services, clinics and medical centers are scattered across each of the state's fourteen rural and frontier counties. These facilities and services – described in greater detail throughout this data book – provide most of the basic health care received by our state's rural and frontier populations.

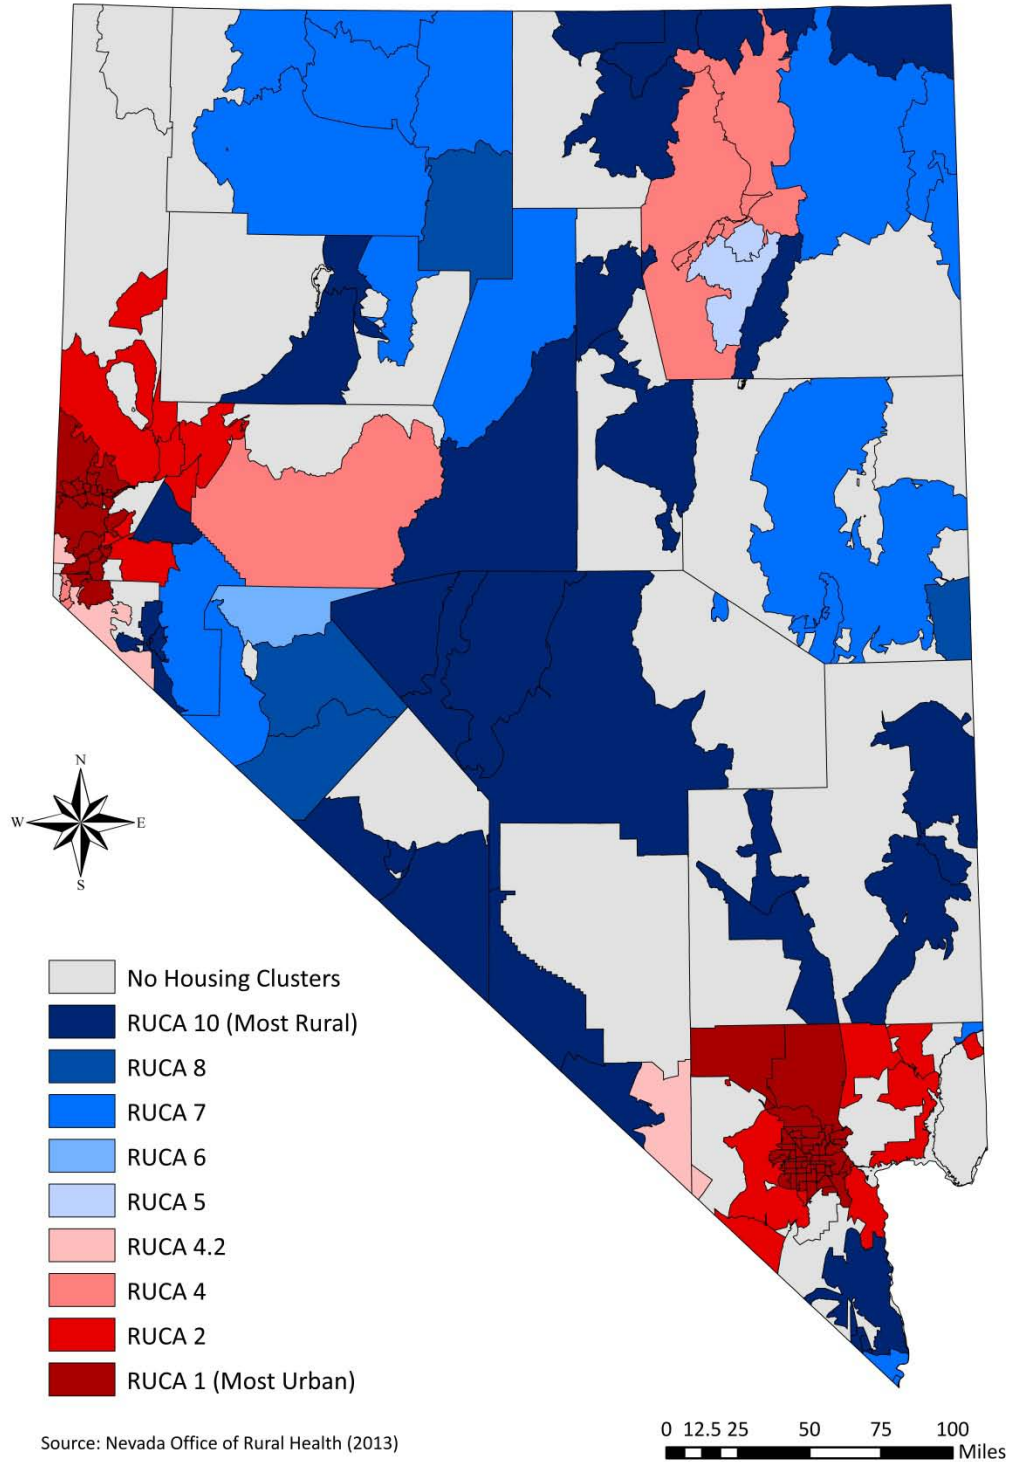

Map 2 highlights the considerable heterogeneity of Nevada's population and geography utilizing "RUCA" codes ranging from 1 (the red shaded or core areas of urbanized areas) to 10 (the blue shaded, mostly rural/frontier, isolated areas of the state). Recent improvements in geographic information systems (GIS) have made it possible to refine our identification and understanding of urban and rural America. A key advancement has been the development of rural-urban commuting areas or "RUCAs" which provide a more fine-grained classification of rural areas applicable at both the county and sub-county (e.g., census tracts) units of analysis (Hart, Larson, and Lishner, 2005; WWAMI Rural Health Research Center, 2008).

RUCA analysis uses census commuting data to classify census tracts on the basis of geography and work commuting activity between places. One strength of the RUCA approach is the use of commuting data to differentiate rural areas according to their economic integration with urban areas and other rural areas. RUCAs thus treat rurality as a continuous variable rather than a dichotomous variable or residual category as do the other classification schemes, wherein "RUCAs range from the core areas of urbanized areas to isolated small rural places, where the population is less than 2,500 and where there is no meaningful work commuting to urbanized areas" (Hart, Larson, and Lishner, 2005, p. 1,153).

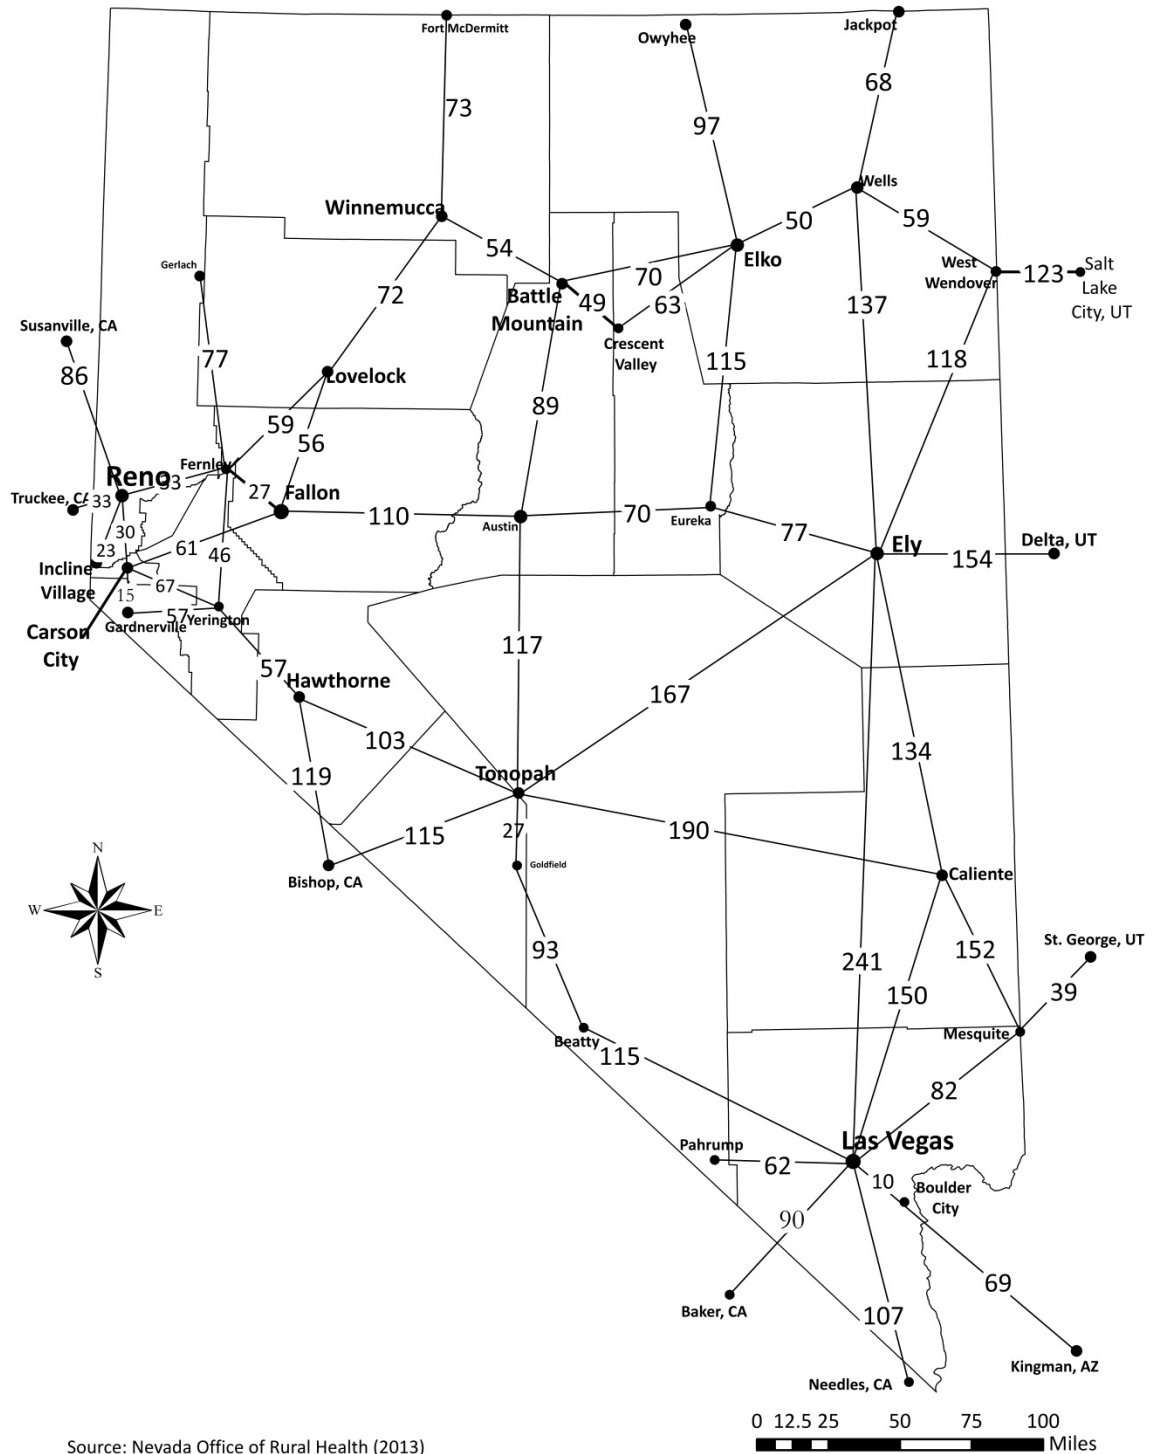

Map 1: Healthcare Resources in Nevada

**Map 2: Nevada Population and Geography
by Rural-Urban Commuting Areas (RUCA)**

Map 3: Nevada Mileage Diagram

Map 2 underscores the concentration of most of the state's population in zip codes located in the northwestern and southern counties of the state (RUCAs 1-2), and the dispersion of the remainder of the state's population (approximately 10 percent or 250,000-275,000) across a vast geographic expanse of rural and frontier regions of the state (RUCAs 4-10). Map 2 also highlights the considerable variation within counties. For example, the urban counties of Washoe County and Clark County contain substantial areas that are rural or frontier in nature; conversely rural and frontier counties such as Lyon and Nye Counties possess comparatively urban areas or zip codes economically integrated with urban centers in the state.

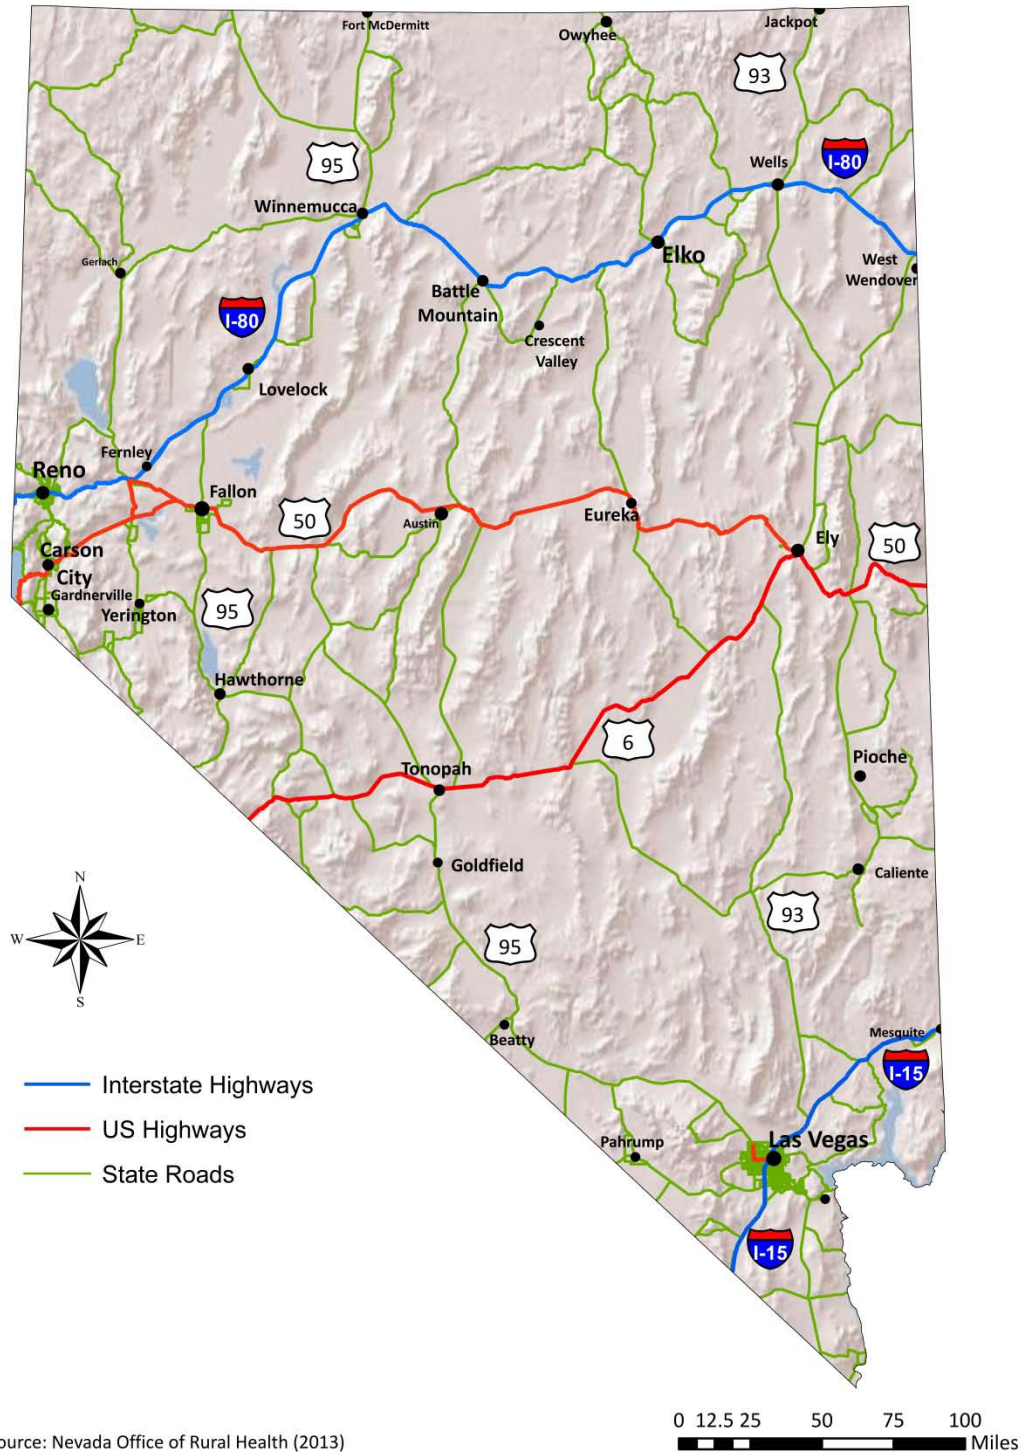

Map 3 highlights the vast distances separating the state's rural communities from urban centers, as well as the considerable distances separating these communities from one another. Most of Nevada's rural and frontier communities are located in sparsely populated counties that are considerable distances from the state's urban and tertiary care centers. The average distance between acute care hospitals in rural Nevada and the next level of care or tertiary care hospital is 114.7 miles and the average distance to the nearest incorporated town is 46.5 miles. Consequently, the primary health care delivery issue for rural residents and communities in Nevada is how best to overcome the spatial isolation and enormous geographic distances that characterize most of rural and frontier Nevada.

The eleven towns in Nevada with federally-designated Critical Access Hospitals or "CAHs" are an average distance of 45.5 miles from the nearest incorporated town, an average of 54.4 miles from the next hospital, and an average of 104.8 miles from the next level of care or nearest tertiary care hospital. As such, Nevada's eleven CAHs represent vital hubs in the state's rural and frontier health care system, providing essential inpatient and 24/7 emergency care to nearly 300,000 residents of rural and frontier areas of the state.

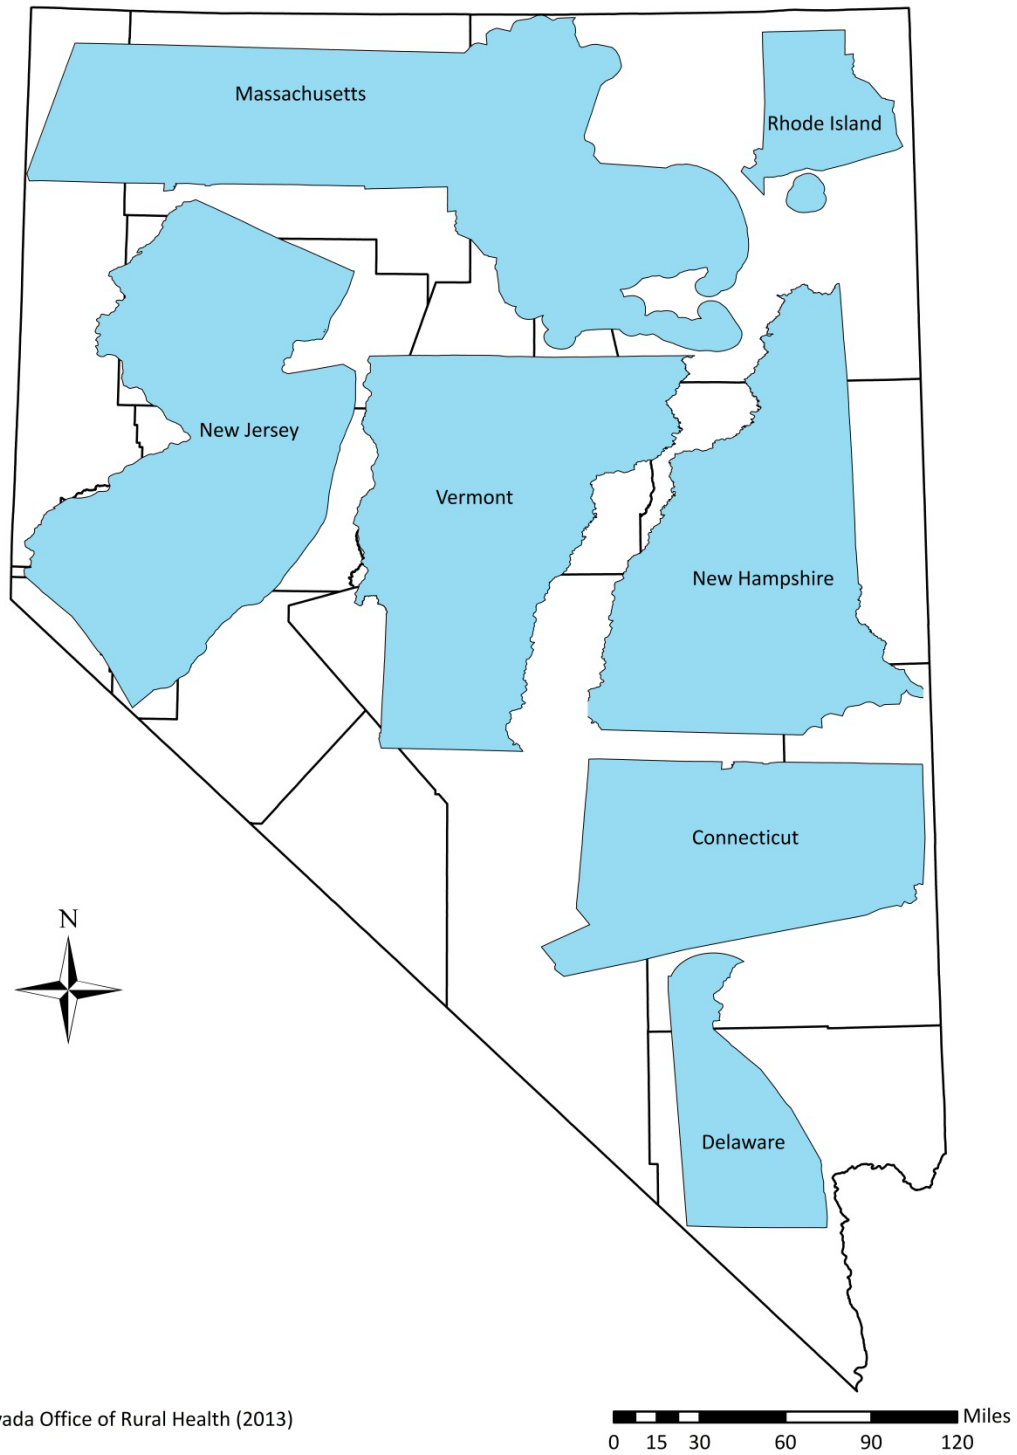

Map 4 highlights Nevada's unique topography. Nevada comprises the western half of our Nation's Great Basin. Ridge after ridge of tall, rugged, brown mountains are broken up with flat sage covered valleys. The Great Basin is a high desert defined by rows of mountains running north to south, like stretch marks on the earth. The earth's crust is stretched thin and earthquake activity is second only to Hawai'i. The mountains trap the water inside the basin. A hundred and fifty mountain ranges are scattered across the state. Most major roads follow the north to south pattern with two major exceptions. US Highway 50 – "the loneliest highway in America" – zigzags across the middle of the state winding through numerous mountain summits. The map shows Interstate 80 curves northeastwards across the state largely following the Humboldt River basin. Travel time from most county hospitals to regional medical centers is thus measured in hours not minutes.

Map 5 is a proportional integration of New England states within the boundaries of the State of Nevada. The purpose of this map is the visualization of the distances of a larger western state when compared to the smaller geographical size of the New England states. The two major centers of population are in Reno and Las Vegas (89.5%). By placing the selected New England states within the boundaries of Nevada, the size of a Nevada county can be compared to the size of one of these states.

Data Book Sections and Contents

The first section of the *Nevada Rural and Frontier Health Data Book – 2013* contains the most current data on the social and demographic characteristics of rural and frontier Nevada, including information on:

- Population and population density
- Population change and projections
- Population aging and diversification
- Population by place of birth
- Veterans in Nevada

Section two contains the most current data from state and federal agencies on the social and economic characteristics of rural and frontier Nevada, including data on:

- Personal and family income
- Poverty rates for children and adults
- Educational enrollment and public school expenditures
- Educational attainment and high school graduation rates
- Voter registration and party affiliation
- Crime statistics

Section three contains the most current data on population health and health insurance coverage in rural and frontier Nevada, including information on:

- Health insurance coverage and the uninsured
- Population health status and risk factors to health
- Teen pregnancy and birth rates
- Morbidity and mortality rates
- County health outcomes and health determinants rankings

Section four contains the most current data on the health care workforce in rural and frontier Nevada, including data on:

- Employment and unemployment
- Estimated hospital and health sector employment
- Number and per capita geographic distribution of licensed health professionals
- Health professional shortage and medically underserved areas

The fifth section of the book contains the most current data on health care facilities, health care resources, and economic aspects of health care in rural and frontier Nevada, including information on:

- Health care and hospital industry sector employment and payroll
- Economic impact of the health care and hospital industry sector
- Rural and frontier clinics, community health center, tribal facilities, and Nevada’s telehealth network
- Utilization trends and financial performance among the state’s rural and frontier hospitals and comparisons with urban facilities

The data sources, explanation of data tabulations, and notes on the strengths and weaknesses of the data presented for each table, figure, and map in the data book are contained in the book’s appendices.

Acknowledgments

We would like to thank the numerous individuals, organizations, and agencies who assisted us in the preparation of the data book, and who endured our requests for data. In particular, we would like to acknowledge:

- Keith Clark who provided the data book’s cover photo
- Nevada State Health Division agencies who supplied much of the population health and health workforce data, in particular, Jane Countryman, Vickie Estes, Barbara Heywood, Theron Huntamer, Jay Kvam, Connie McFadden, Sandra Noffsinger, Julia Peek, and Brad Towle
- Jeff Hardcastle, the Nevada State Demographer’s Office
- Steve Boline of Nevada Rural Hospital Partners
- Joseph Greenway and Danny Chan of the Center for Health Information Analysis at University of Nevada, Las Vegas
- Tom Harris and Eugenia Larmore of the Center for Economic Development at the University of Nevada, Reno
- William Anderson, Darragh Huggins, Muhammed Quddus, and John Torres at the Nevada Department of Employment, Training, and Rehabilitation
- Linda Heiss of the Nevada System of Higher Education
- Wanda Brown and Lisa Jones of the Aging and Disability Services Division

- Alejandra Livingston of the Department of Corrections
- Melissa Lewis from the Division of Health Care Financing and Policy
- Jody Sekerak from the Phoenix Area Indian Health Service
- Paula Guzman of the Nevada Health Centers
- Rory Chetelat at the Southern Nevada Health District for EMT health professions data
- The nearly two dozen State of Nevada licensing boards for health professions data
- Kelly Flannery at United States Department of Veterans Affairs

The responsibility for any errors of omission or commission is ours alone. The preparation and distribution of this volume was made possible through funding received by the Nevada State Office of Rural Health from the Medicare Rural Hospital Flexibility Grant Program which is administered by the federal Office of Rural Health Policy (ORHP) and the Medical Education Council of Nevada (MECON).

In closing, since health and health care in rural and frontier Nevada are ever-changing, our ambition is to continue to update and distribute this volume on a biennial basis. If your organization or agency utilizes the data book, we would appreciate learning more about how you have used it and how future editions can be improved. As such, please send your comments and suggestions, as well as requests for additional copies to Tabor Griswold at tgriswold@medicine.nevada.edu.

Endnotes

Section One: Demographic Profile of Rural and Frontier Nevada

Table 1.1: Population in Nevada by County – 2012 to 2016

Note: The figures in this table are from the most recently released Nevada State Demographer’s Office. The Nevada County Population Projections 2012 to 2031 based on the certified estimates of the year 2011 was released after the population estimates presented in this data book were used. Denominators may vary slightly as the tables and per population denominators were built using the most recent numbers at the time.

Tables 1.9 to 1.11, 1.13 to 1.17, and Table 1.22: Population by Age Category in Nevada by County – 2012

Note: The figures in these tables do not include people living in group quarters, e.g. prisons.

Table 1.18 and to 1.19: Population by Selected Racial Categories in Nevada by County – 2012

Note: The figures are of all origins and not broken out by Hispanic ethnicity.

Section Two: Social and Economic Profile of Rural and Frontier Nevada

Table 2.1: Personal Income in Nevada by County – 2000 to 2011

Note: Bureau of Economic Analysis regional subtotals do not add to the totals.

Table 2.6: Sources and Amounts of Personal Income in Nevada by County – 2011

Note: Bureau of Economic Analysis regional subtotals do not add to the totals.

Table 2.12: New Building Permits Issued in Nevada by County – 2011

Note: Counties must participate in the Census Building Permits Survey to be counted. This data can be considered an indicator of the economic vitality of a county.

Tables 2.18 to 2.20: Nevada Student Characteristics Pre-K to 12 in Nevada by County

Note: The figures in some these tables from the Nevada Report Card system have student enrollment numbers for public schools in Nevada Counties which may not add to the total student enrollment numbers for the State of Nevada. Some public schools and charter schools may not be included in the Nevada total.

Table 2.18: Public Expenditure on Education in Nevada by County – 2007 to 2011

Note: “-” the element of data was new and not collected.

Table 2.21 to 2.23: Public School Graduates

Note: Esmeralda county has no high school, “N/A” means not population and “—” means numbers are less than 10 or not available.

Table 2.26: Voter Registration in Nevada by County – 2012

Note: The figures in these tables do not include people living in group quarters, e.g. prisons.

Table 2.29: Community Organizations in Nevada by County – 2010

Note: The data can be considered an indicator of the community engagement with non-profit organizations interested in social programs.

Section Three: Population Health Profile of Rural and Frontier Nevada

Table 3.16: Nevada Checkup (SCHIP) Enrollment in Nevada by County – 2002 to 2012

Note: The numbers for each year represent the annualized unduplicated enrollment for the year.

Table 3.17: Nevada Checkup (SCHIP) Enrollment by Age in Nevada by County – 2002 to 2012

Note: The numbers for each age are for the enrollees for first month of 2013.

Table 3.18: Enrollment in Veterans Health Administration by Gender in Nevada by County – 2011

Note: Due to confidentiality issues and the associated suppression of data, county/regional subtotals may not sum to a statewide total.

Table 3.19: Users of Veterans Health Administration by Gender in Nevada by County – 2011

Note: Due to confidentiality issues and the associated suppression of data, county/regional subtotals may not sum to a statewide total.

Table 3.46: Population Health Institute's County Health Rankings in Nevada Health Outcomes – 2012

Note: Urban counties are shaded in grey. Esmeralda County is not ranked due to small populations and missing data.

Table 3.47: Population Health Institute's County Health Rankings in Nevada Health Determinants – 2012

Note: Urban counties are shaded in grey. Esmeralda County is not ranked due to small populations and missing data.

Section Three: Population Health Profile of Rural and Frontier Nevada

Table 3.32 to 3.42: Various Vital Statistics Tables by County/Region in Nevada – 2010

Note: '—' means no data available. Due to confidentiality issues and the associated suppression of data, regional subtotals do not sum to a statewide total for some industries. Las Vegas Metropolitan Statistical Area (MSA) is Clark County, Reno-Sparks MSA includes Washoe and Storey Counties, and Rural and Frontier includes the remaining 13 non-urban counties.

Section Four: Health Care Workforce in Rural and Frontier Nevada

Table 4.6: Projected Employment in the Health Care and Social Assistance Sector by Region in Nevada – 2020

Note: '—' means no data available. Due to confidentiality issues and the associated suppression of data, regional subtotals do not sum to a statewide total for some industries. Las Vegas Metropolitan Statistical Area (MSA) is Clark County, Reno-Sparks MSA includes Washoe and Storey Counties, and Rural and Frontier includes the remaining 13 non-urban counties. Carson City hospital data were generated by the authors using CHIA hospital employment data and the DETR employment growth rate for the sector.

Table 4.7 to 4.47: Licensed Professionals by County/Region in Nevada – 2012

Note: The calculation of the number of licensed health care professionals per 100,000 POPULATION IN Tables 4.8 through 4.47 utilize county- and state- population estimates developed by the Nevada State Demographer's Office for 2012. All health professional licensure data presented in Tables 4.7 through 4.47 refer to individuals possessing an active license with a State of Nevada licensing board. Thus, these tables exclude inactive and/or retired licensees.

Table 4.8: Licensed Primary Care Physicians (MDs and DOs) by in Nevada by County – 2012

Note: Family Medicine, General Practice, Internal Medicine, Obstetrics and Gynecology, and Pediatric physicians are considered primary care physicians.

Table 4.48: Population Residing in a Health Professional Shortage Area in Nevada by County – 2010

Note: HPSA Areas are current designations and population counts are from the 2010 census.

Section Five: Health Care Resources and Economics of Rural and Frontier Nevada

Table 5.2: Community Hospitals in Rural and Frontier Nevada – 2013

Note: The term "Critical Access Hospital" of CAH refers to a Medicare hospital facility designation from the Centers for Medicare and Medicaid Services. This designation allows small rural and frontier hospitals to receive cost-based reimbursement for inpatient and outpatient services provided to Medicare beneficiaries. As of February 2013, there were eleven certified CAHs and four CAH-eligible hospitals in Nevada. CAH and CAH-eligible receive financial and technical assistance from the Nevada Rural Hospital Flexibility Program. The Nevada Flex Program is a federally-supported program administered by the Nevada State Office of Rural Health based with the Office of Statewide Initiatives at the University of Nevada School of Medicine.

Table 5.11: Number and Per Capita Distribution of Licensed Community Hospital Beds and Long-Term Care Beds in Nevada by County – 2011

Note: The calculation of licensed beds per capita utilize county- and state-level population estimates developed by the Nevada State Demographer's Office for 2011.

Tables 5.2, 5.3, 5.10, 5.11, 5.16 through 5.23 use CMS cost data.

Note: Medicare cost reports from CMS have not been finalized for all hospitals in FY11. The hospitals' financial and utilization data is developed from the posted FY11 data when available. FY10 data was used when FY11 was not available.
