## ABSTRACT

This inventory represents the status and usage of all permitted, certificated, claims of vested right groundwater rights, and exempt domestic wells located within the Nevada portion of Mesquite (Sandy) Valley, Hydrographic Basin 10-163, for water year 2019 (October 1, 2018 through September 30, 2019). Also included are tables, graphs, and data associated with this use.

The data presented are valid for the period of this report, and may vary from previously published figures as water rights within the basin are subject to administrative action, such as certification, cancellation, forfeiture, or withdrawal on a continual basis.

For water year 2019, the committed water resource totaled 2,258 acre-feet, with estimated pumpage of approximately **626 acre-feet**. This includes an estimated 456 acre-feet pumped from exempt domestic wells.

Pumping by exempt domestic wells is the largest manner of use within the basin, with 2019 pumpage estimated to be 456 acre-feet, and commitments totaling 1822 acre-feet. In 2019, the second largest manner of use was quasi-municipal, with pumpage totaling 133 acre-feet, and commitments totaling 309 acre-feet.

## HYDROGRAPHIC BASIN SUMMARY

HYDROGRAPHIC BASIN NUMBER	163, REGION 10	
HYDROGRAPHIC BASIN NAME	MESQUITE V. (SANDY V.)	
COUNTIES	CLARK	
MAJOR COMMUNITIES	SANDY VALLEY	
DESIGNATED	YES	
DENIALS BASED UPON WATER AVAILABILITY	IRRIGATION	
GROUNDWATER LEVEL MEASUREMENTS	NDWR	
PUMPAGE INVENTORY, ACRE-FEET IN 2019	626 <sup>1</sup>	
STATE ENGINEER'S ORDERS

COMMERCIAL ..... 33	DOMESTIC..... 1,822	IRRIGATION .....44
MINING & MILLING ... 50	QUASI-MUNICIPAL. 309	

---

<sup>1</sup> Includes pumpage by exempt domestic wells, as defined by NRS 534.013.

<sup>2</sup> Committed groundwater resource data are accurate for July 2019. Manner of use category totals vary over time, as rights are not necessarily static. Rights may be subject to change applications, certification, withdrawals, forfeiture and cancellations; each of these circumstances could affect the duty, diversion rate and acreage associated with a given right. The value associated with each manner of use category does not include those portions that have been relinquished in support of domestic wells. A query of the NDWR Well Log Database indicates that 911 domestic wells existed in the basin during water year 2019. This query is assumed to represent both appropriations and exempt domestic wells. The committed domestic water resource is considered to be 2 acre-feet per domestic well, or 1,822 acre-feet annually.

## **PURPOSE AND SCOPE**

The purpose of this report is to inventory all of the groundwater resources allocated and described by the Office of the State Engineer, Nevada Division of Water Resources (NDWR), and to estimate the amount of groundwater pumped within the Mesquite (Sandy) Valley Hydrographic Basin (10-163; hereafter referred to as Mesquite Valley), during water year 2019. This report estimates the amount of groundwater pumped under the permits and certificates issued by the State Engineer, claims of vested right, as well as the amount pumped by exempt domestic wells within the basin.

## **DESCRIPTION OF THE STUDY AREA**

Mesquite Valley is a basin located in southern Nevada that straddles the Nevada and California state line. The valley is approximately 40 miles southwest of Las Vegas and 15 miles west of Jean, and is within the Central Hydrographic Region. The town of Sandy Valley is the principal community. The Nevada portion of the basin (approximately 240 square miles) lies within Clark County and the California portion of the basin (approximately 220 square miles) lies within Inyo and San Bernardino Counties (Figure 1).

Mesquite Valley is bounded on the east and northeast by the Spring Mountain Range, the primary watershed for the basin. The Clark Mountain Range forms the south boundary, the Mesquite Mountains border the basin to the southwest, and the Kingston Range borders the basin to the west. The northern and northwest boundaries are formed by a low alluvial rise and intermittent hills separating Mesquite Valley from Pahrump Valley. The adjacent Nevada hydrographic basins are Pahrump Valley (10-162) to the northwest, Las Vegas Valley (13-212) to the northeast, Ivanpah Valley - Northern Part (10-164A) to the east, and Ivanpah Valley - Southern Part (10-164B) to the southeast. The exterior boundary of the Mesquite Valley Hydrographic Basin is as described by Designation Order 701, issued by the Nevada State Engineer on January 5, 1978.

## **GROUNDWATER LEVELS**

Depths to groundwater in Mesquite Valley are measured by NDWR on a semi-annual basis. Data for active monitoring well sites (Figure 2) can be found on NDWR's website at <http://water.nv.gov/WaterLevelData.aspx>, or via the Nevada Hydrology Data Mapping Application, accessible at <http://water.nv.gov/mapping.aspx>. Groundwater level data are also collected by the U.S. Geological Survey (USGS) and may be accessed through their website at <https://waterdata.usgs.gov/nv/nwis/gw>.

## METHODS TO ESTIMATE PUMPAGE

One of the purposes of this report is to estimate the amount of groundwater pumped under vested claims, permits and certificates issued by the State Engineer, as well as the amount pumped by the exempt domestic wells in the valley. Table 1 and Figure 3 show historical pumpage by manner of use; Figure 4 shows the percentage of water pumped by manner of use; and Figure 5 compares groundwater commitments and estimated pumpage by manner of use. The following methods were used to arrive at the estimated use:

- Where totalizing meters were in place, meter readings were taken and compared with previous data (if available).
- Where meters were not in place and the use was irrigation, pumpage was estimated by multiplying the number of hours the well was operated during the past year (determined from an hour meter reading or asking the water user) by the certificated diversion rate.
- Where there were no flow meters or other reliable options for estimating pumpage and the use was irrigation, pumpage was estimated by dividing the Net Irrigation Water Requirement (NIWR) for the crop grown by the efficiency of the irrigation method used, then multiplying by the number of acres irrigated. Irrigation efficiencies associated with three types of irrigation methods are pivot at 85%, wheel line or other hand moved sprinklers at 75%, and flood at 60%. The pumpage amount estimated by this method was limited by the duty of the permit. For places where the groundwater rights were supplemental to surface water, groundwater use was estimated using the NIWR method above, but adjusted based on available surface water for the year. Evapotranspiration and NIWR data by basin can be found on the NDWR website at: <http://water.nv.gov/Evapotranspiration.aspx>.
- Where meters were not present, previous data were not available, and the manner of use was not irrigation, pumpage was estimated by applying the annual duty associated with the certificate (if the water right was perfected), permit or claim, if the use was as described in the certificate, permit or claim. If the use was not as described in the certificate, permit or claim, a value was estimated based upon the circumstances of use for the subject year.
- Exempt domestic wells may be drilled and utilized where water service from a purveyor is not available. These types of wells do not require a permit from the State Engineer if they do not pump more than 2 acre-feet per year as provided by Nevada Revised Statutes (NRS) [534.180](#). [NRS 534.013](#) defines this category of domestic use as follows: “*Domestic use or domestic purposes extends to culinary and household purposes directly related to a single family dwelling, including, without limitation, the watering of a family garden and lawn and the watering of livestock and any other domestic animals or household pets.*” The number of exempt domestic wells in the basin was determined by a query of the NDWR Well Log Database. The amount of water pumped by exempt domestic wells was estimated to be 0.5 acre-foot per well in Mesquite Valley, or 456 acre-feet.

## TABLES

**APPENDIX A. MESQUITE VALLEY 2019 GROUNDWATER PUMPAGE BY  
APPLICATION NUMBER**

## EXPLANATION OF COLUMN HEADINGS FOR GROUNDWATER PUMPAGE INVENTORY

APP NUMBER	The file number of the Application or the Vested Claim of Right.
STATUS	Indicates if the application is a Vested Claim of Right (VST), a Permit (Permit), or a Certificate (Cert).
OWNER OF RECORD	The owner of the water right as recorded in the files of the State Engineer. A water right may have more than one owner of record.
PLACE OF USE	
QQ	The quarter quarter of the Section in which the point of diversion is located.
Qtr	The quarter of the Section in which the point of diversion is located.
Sec	The Section in which the point of diversion is located.
T	The Township in which the point of diversion is located.
R	The Range in which the point of diversion is located.
ACRES OR DUTY	The number of acres that are permitted to be irrigated or the duty if the manner of use is anything other than irrigation.
ACRES IRR OR USE	The number of acres irrigated or the manner of use of the appropriated water. The types of manner of use may include: COM - Commercial                      DOM - Domestic IRR - Irrigation                          MM - Mining & Milling QM - Quasi-Municipal
USED (AF)	The amount of water used during the water year, in acre-feet, as determined by review of records and/or field investigation.
REMARKS	Notes pertaining to field investigation and/or review of records.
