Abstract

This inventory represents the current status and usage of all non-revocable¹, revocable², environmental control³ and shallow aquifer⁴ groundwater rights located within the Las Vegas Valley, Clark County, Nevada for the 2002 calendar year. Also included for summary purposes are various tables and graphs showing the imported use from the Colorado River and effluent re-use.

The numbers that follow are valid at the time of this report and may vary from previously published figures since water rights within the Las Vegas Valley are being approved, certified, canceled or withdrawn on a daily basis.

Currently the total groundwater rights permitted within the Las Vegas Valley equals 87,195 acre-feet. Of this, 68,850 acre-feet are non-revocable; 11,521 acre-feet are revocable; 6,604 acre-feet are environmental control and 219 acre-feet are rights for the shallow aquifer.

For the 2002 calendar year, 77,268 acre-feet of groundwater were pumped from the Las Vegas Valley. Of this amount, 64,414 acre-feet represent non-revocable rights: This is 93.6 percent of the available non-revocable rights and 83.4 percent of the total pumped for 2002. 5,954 acre-feet represent revocable rights. This is 51.7 percent of the available revocable rights and 7.7 percent of the total pumped for 2002. 1,773 acre-feet represent environmental control rights. This is 26.8 percent of the available environmental control rights and 2.3 percent of the total pumped for 2002. 84 acre-feet represent shallow aquifer rights: This is 38.2 percent of the available shallow aquifer rights and .1 percent of the total pumped for 2002.

Types of Water Rights pumped within the Las Vegas Valley

¹ Non-revocable rights are those rights, which have a priority date prior to March 24, 1955.

² Revocable rights are those rights, which have a priority date on or after March 24, 1955 and are subject to revocation when a municipality engaged in furnishing water can furnish water.

³ Permits issued for environmental control are not subject to revocation, but are site specific and limited to the length of the project.

⁴ Shallow aquifer rights are those rights issued to beneficially use water pumped to alleviate potential hazards to persons and property resulting from the rise of groundwater due to secondary recharge.

The remaining 6.5 percent (5,043 acre-feet) of groundwater pumped for 2002 is accounted for as estimated usage from domestic wells. During the 2002 calendar year 2,270 acre-feet of water were pumped from recharge storage. Pumpage from recharge storage is included under total pumpage in Table No. 1 but is excluded for statistical purposes when determining the type and percentage of each water right pumped.

Of the 87,195 acre-feet of groundwater rights permitted within the Las Vegas Valley, 75,846 acre-feet are metered; this is 87.0 percent of the total permitted rights and 90.4 percent of the total permitted water rights pumped during 2002 were metered.

2002 was the sixteenth year for the artificial recharge program in which 2,254 acre-feet of potable Colorado River water was injected into the Las Vegas Valley groundwater basin.

General Statement

The Las Vegas Valley groundwater pumpage data is collected by several methods, a brief explanation follows.

The Southern Nevada Branch Office of the Division of Water Resources read 1,268 individual well meters during 2002 (2,339 site visits) which included all of the hotels, golf courses and large private industries that obtain some, if not all, of their water from their own wells. This data is listed in Table No. 1 under metered permit wells which includes historical data for individual meters that were not read during 2002.

The Southern Nevada Branch Office of the Division of Water Resources also conducted 244 individual field investigations in the Las Vegas area: This data, together with data from previous years, is listed in Table No. 1 under unmetered permit wells. The remaining data is supplied monthly by the individual water purveyors and is listed in Table No. 1.

The inventory of domestic wells has been completed and is up to date through December 31, 2000. For this report the total number of domestic wells is a summation of wells located during the domestic well inventory and new domestic wells reduced by the number of domestic wells plugged and abandoned. A usage value of one acre-foot per year was then given to each of the remaining wells as listed in Table No. 1.

Historically the State Engineer has issued certificates of appropriation with the amount of the appropriation limited by diversion rate and duty. However, in some instances the State Engineer issued certificates of appropriation with a diversion rate but no limiting duty. In preparation of this report the diversion rate was expanded to establish a duty for statistical purposes, however the duty is reported as zero in the summary of groundwater usage. The actual duty in these instances is the limit and extent of the water actually placed to beneficial use, not to exceed the diversion rate expanded.

Artificial recharge is Colorado River water that is injected into the Las Vegas Valley groundwater aquifer. Debits from the artificial recharge storage account are made when the individual public utilities groundwater pumpage exceeds their permitted groundwater rights.

The summation of this data, as indicated in Table No. 1, is the annual amount of ground water pumped from the Las Vegas Valley.
