ABSTRACT

This inventory represents the status and pumpage of all permitted, certificated, claims of vested right groundwater rights, and exempt domestic wells located within Las Vegas Valley, Hydrographic Basin 13-212, for calendar year 2021. Also included are tables, graphs, and data associated with this use.

The data presented are valid for the period of this report and may vary from previously published data as water rights within the basin are subject to administrative action, such as certification, cancellation, forfeiture, or withdrawal on a daily basis.

For calendar year 2021, the committed groundwater resource totaled 100,102 acre-feet, with estimated pumpage of approximately **74,365 acre-feet**. This figure includes an estimated 3,971 acre-feet pumped from exempt domestic wells.

Municipal and quasi-municipal were the largest manners of use within the basin, with pumpage totaling 55,671 acre-feet (including 688 acre-feet of recharge recovery), and appropriations of 62,871 acre-feet. The second largest manner of use was recreation, with pumpage of 5,203 acre-feet and appropriations totaling 5,012 acre-feet. The third largest manner of use was domestic wells.

¹ Includes pumpage by exempt domestic wells, as defined by NRS 534.013.

² Committed groundwater resource data are accurate for December 2021. Total includes groundwater and other (shallow) groundwater. Manner of use category totals vary over time, as water rights are not necessarily static. Rights may be subject to change applications, certification, withdrawals, forfeiture and cancellations; each of these circumstances could affect the duty, diversion rate and acreage associated with a given right. The value associated with each manner of use category does not include those portions that have been relinquished in support of domestic wells. A physical inventory completed by NDWR indicates that 3,971 exempt domestic wells existed in the basin during calendar year 2021. The committed domestic water resource is considered to be 2 acre-feet per well, or 7,942 acre-feet for all exempt domestic wells. There are also 401 acre-feet of permitted domestic use appropriations; therefore, the total committed water resource for domestic use equals 8,343 acre-feet.

PURPOSE AND SCOPE

The purpose of this report is to inventory all of the groundwater resources allocated and described by the Office of the State Engineer, Nevada Division of Water Resources (NDWR), and to estimate the amount of groundwater pumped within the Las Vegas Valley during calendar year 2021 (Table 1). This report estimates the amount of groundwater pumped under the permits and certificates issued by the State Engineer, claims of vested right, and the amount pumped by exempt domestic wells within the basin.

DESCRIPTION OF THE STUDY AREA

The Las Vegas Valley Hydrographic Basin is located within Clark County in southern Nevada, occupying approximately 1,564 square miles (Figure 1). The basin lies approximately 35 miles west of the Hoover Dam and is within the Colorado River Hydrographic Region. Las Vegas, the most populated city in Nevada, is the principal community.

The Las Vegas Valley is bounded on the west by the Spring Mountains; on the north by the southern parts of the Sheep and Las Vegas Ranges; on the east by Frenchman Mountain and other low-lying ranges; and on the south by the River Mountains and McCullough Range. Most of the groundwater supply is generated from precipitation that falls on the Spring Mountains and Sheep Range. The valley is topographically closed except for Las Vegas Wash to the southeast, which drains into Lake Mead.

The adjacent Nevada hydrographic basins are Pahrump Valley (10-162) to the west, Three Lakes Valley–Southern Part (13-211) to the north and northwest, Coyote Spring Valley (13-210) to the north, Hidden Valley (North, 13-217) and Garnet Valley (Dry Lake Valley, 13-216) to the northeast, Black Mountains Area (13-215) to the east, Eldorado Valley (10-167) to the southeast, Hidden Valley (South, 10-166) and Jean Lake Valley (10-165) to the south, and Ivanpah Valley – Northern Part (10-164A) and Mesquite Valley (Sandy Valley, 10-163) to the southwest. The exterior boundary of the Las Vegas Valley Hydrographic Basin is as described by Designation Orders 175, 182, 189, 249, 275, and 833 issued by the Nevada State Engineer on January 10, 1941, February 29, 1944, November 22, 1946, April 18, 1961, May 25, 1964, and December 27, 1983, respectively.

GROUNDWATER LEVELS

Depths to groundwater in Las Vegas Valley have been measured by NDWR consistently since the early 1950's. Data for actively monitored well sites (Figure 2) can be found on NDWR's website at <http://water.nv.gov/WaterLevelData.aspx>, or via the Nevada Hydrology Data Mapping Application, accessible at <http://water.nv.gov/mapping.aspx>. Groundwater level data are also collected by the U.S. Geological Survey (USGS) and may be accessed through their website at <https://waterdata.usgs.gov/nv/nwis/gw>. Southern Nevada Water Authority (SNWA), City of North Las Vegas (CNLV), and City of Las Vegas (CLV) also collect groundwater level data, which may be accessed through their respective websites.

IMPORTED WATER

Colorado River water has been imported from the Black Mountains Area since 1942, when a pipeline was constructed from Lake Mead to the Basic Magnesium manufacturing complex to support the war effort. Prior to 1955, the City of Henderson (CoH) and Basic Management, Inc. (BMI) were the only areas in the valley served by imported Colorado River water. In 1955, Las Vegas Valley Water District (LVVWD) began purchasing water from BMI for public supply purposes. In 1971, the Southern Nevada Water Project (SNWP) became operational and large-scale importation of Colorado River water to the valley became possible.

Purveyors that import water from the Colorado River independently include CoH and BMI. Purveyors that import through the SNWP system include LVVWD, Nellis Air Force Base (NAFB), CNLV, and CoH. Table 2 contains data regarding amounts of water imported by each water purveyor in the basin.

RECHARGE, STORAGE AND RECOVERY PROGRAM

LVVWD operates an aquifer recharge, storage, and recovery program in Las Vegas Valley. This project is associated with Nevada State Engineer's Recharge Permits R-001, R-003, and R-012, and has been in operation since 1987. Treated Colorado River water is injected into transmissive units of the principal aquifer through injection wells located primarily in the central and northwest parts of the Las Vegas Valley. State Engineer's Order No. 1176 (In-Lieu Recharge) was issued on December 10, 2004 and allows credit for pumping less than the permitted groundwater rights that a municipal water purveyor possesses. This order allows 85% of non-pumped groundwater allocation to be recovered in the future, while 15% of the water remains in the aquifer. The Las Vegas Paiute Tribe also recovers water under the program, per an agreement with LVVWD and SNWA.

CNLV operates an aquifer recharge, storage, and recovery program in Las Vegas Valley. This project is associated with Nevada State Engineer's Recharge Permits R-007 and R-008, and has been in operation since 1990. Treated Colorado River water is injected into the principal aquifer through several injection wells. Table 3 contains data regarding groundwater pumpage and artificial recharge.

EFFLUENT

Several agencies operate wastewater treatment facilities within the Las Vegas Valley area. The Clark County Water Reclamation District operates two, CLV operates three, CoH operates two, and CNLV operates one. All of these facilities treat wastewater received from sewer connections, including residential, hotel, commercial, and industrial users. The treated effluent is then either discharged into Las Vegas Wash or pumped to other uses. All of the wastewater in the Las Vegas Valley is reclaimed: the majority via Colorado River System return flow credits into Lake Mead; some is directly reused as treated effluent for irrigation on golf courses and parks or other industrial uses. Use of the effluent for irrigation or other manners of use is authorized by the Nevada State Engineer under secondary permits. For calendar year 2021, a total of **19,304 acre-feet** of effluent were delivered for reuse in the Las Vegas Valley.

METHODS TO ESTIMATE PUMPAGE

One of the purposes of this report is to estimate the amount of groundwater pumped under vested claims, permits, and certificates issued by the State Engineer, as well as the amount pumped by the exempt domestic wells in the valley. Table 1 and Figure 4 show historical pumpage by manner of use; Figure 5 shows the percentage of water pumped by manner of use; and Figure 6 compares groundwater commitments and estimated pumpage by manner of use. The following methods were used to arrive at the estimated use:

- Where totalizing meters were in place, meter readings were taken and compared with previous data (if available).
- Where meters were not in place and the use was irrigation, pumpage was estimated by multiplying the number of hours the well was operated during the past year (determined from an hour meter reading or asking the water user) by the certificated diversion rate.
- Where there were no flow meters or other reliable options for estimating pumpage and the use was irrigation, pumpage was estimated by dividing the Net Irrigation Water Requirement (NIWR) for the crop grown by the efficiency of the irrigation method used, then multiplying by the number of acres irrigated. Irrigation efficiencies associated with three types of irrigation methods are pivot at 85%, wheel line or other hand moved sprinklers at 75%, and flood at 60%. The pumpage amount estimated by this method was limited by the duty of the permit. For places where groundwater rights were supplemental to surface water, groundwater use was estimated using the NIWR method above, but adjusted based on available surface water for the year. Evapotranspiration and NIWR data by basin can be found on the NDWR website at: <http://water.nv.gov/Evapotranspiration.aspx>.
- Where meters were not present, previous data were not available, and the manner of use was not irrigation, pumpage was estimated by applying the annual duty associated with the certificate (if the water right was perfected), permit or claim, if the use was as described in the certificate, permit or claim. If the use was not as described in the certificate, permit or claim, a value was estimated based upon the circumstances of use for the subject year.
- Exempt domestic wells may be drilled and utilized where water service from a purveyor is not available. These types of wells do not require a permit from the State Engineer if they do not pump more than two acre-feet per year as provided by Nevada Revised Statutes (NRS) [534.180](#). [NRS 534.013](#) defines this category of domestic use as follows: *“Domestic use or domestic purposes extends to culinary and household purposes directly related to a single family dwelling, including, without limitation, the watering of a family garden and lawn and the watering of livestock and any other domestic animals or household pets.”* The number of exempt domestic wells in the basin is determined by a physical GIS well inventory. The amount of water pumped by exempt domestic wells is estimated to be one acre-foot per well in Las Vegas Valley, or **3,971** acre-feet. This number does not include **201** acre-feet of metered pumpage from permitted domestic wells.

¹From revised records of the Nevada Colorado River Commission.

²First water delivered June 16, 1971.

³Colorado River water diverted through Basic Management pipeline not used by Park Service or Henderson.

⁴Includes losses reported from the Southern Nevada Water System, 4,748 acre-feet in 2021.

⁵Does not include 14,415 acre-feet diverted for testing of the Southern Nevada Water System.

⁶Colorado River water diverted through the Basic Management pipeline and used by the City of Henderson, does not include deliveries to the Lake of Las Vegas development in Black Mountain Basin, 4,121 acre-feet in 2021.

⁷Revised from previously published figures.

⁸Colorado River water diverted through Basic Management pipeline and used by Las Vegas Valley Water District.

Table 3. Summary of groundwater pumpage and artificial recharge (acre-feet) from the Las Vegas Valley for 1956 to 2021.

Calendar Year	LVVWD ¹	NAFB ²	CNLV ²	Permits ²	Domestic ²	Total Recharge ²	Gross Pumpage ³	Net Pumpage ⁴

**APPENDIX A. LAS VEGAS VALLEY EFFLUENT WATER REUSE
FOR CALENDAR YEAR 2021**

Acronyms Used on Effluent Water Reuse Inventory

AF = Acre Feet

APN = Assessor Parcel Number

CET = Certificate

CF = Control Facility

CFS = Cubic Feet per Second

Duty Bal. = Duty Balance

EFF = Effluent

IND = Industrial

IRR/Irr. = Irrigation

Max = Maximum

MUN = Municipal

PER = Permit

POU = Place of Use

PWR = Power

Qtr = Quarter

REC = Recreation

Sec = Section

TCD = Total Combined Duty

TwN = Township

STO = Storage

Sup. = Supplemental

WRC = Water Reclamation Center

**APPENDIX B. LAS VEGAS VALLEY GROUNDWATER PUMPAGE INVENTORY
FOR CALENDAR YEAR 2021**

Acronyms Used on Groundwater Pumpage Inventory

ABN = Abandoned	ODW = On District Water
ABR = Abrogated	OGW = Other Groundwater
AF = Acre Feet	OTH = Other
AH = Average House	PER = Permit
APN = Assessor Parcel Number	POU = Place of Use
APP = Application	PWR = Power
CAN = Cancelled	QM = Quasi-Municipal
CET = Certificate	Qtr = Quarter
CF = Control Facility	REC = Recreation
CFS = Cubic Feet per Second	REJ = Rejected
CNLV = City of North Las Vegas	REL = Relinquished
COM = Commercial	REV = Revoked
CON = Construction	RFA = Ready For Action
DEC = Decreed	RV = Recreational Vehicle
DEN = Denied	RVP = Revocable Permit
DOM = Domestic	Sec = Section
Duty Bal. = Duty Balance	SNW = Shallow Nuisance Water
DWR = Dewatering	STK = Stockwater
EFF = Effluent	STO = Storage
ENV = Environmental	Sup. = Supplemental
EXP = Expired	TCD = Total Combined Duty
FOR = Forfeited	TwN = Township
GH = Guest House	UG = Underground
GW = Groundwater	VST = Vested Claim of Right
IND = Industrial	WD = Well Destroyed
IRR/Irr. = Irrigation	WDR = Withdrawn
LVVWD = Las Vegas Valley Water District	WLD = Wildlife
Max = Maximum	WNV = Well Not Visible
MH = Mobile Home	WRC = Water Reclamation Center
MM = Mining & Milling	WV = Well Visible
MUN = Municipal	WVC = Well Visible Capped
