GROUNDWATER PUMPAGE INVENTORY

CALENDAR YEAR 2016

Groundwater Commissioner: Reed A. Cozens,
P.E. Prepared by: Kerry T. Garcia

Republished 11/16/2023

CORRECTION NOTICE

Smith Valley (Hydrographic Basin 9-107)

Nov. 16, 2023

Pumpage amounts for certain permits have been updated for the calendar years 2016 through 2020. The corrected values by site can be found in Appendix B of the 2021 Smith Valley Pumpage Inventory Report. Data in Appendix B of the 2021 report supersede previously published values. The table below reflects the updated pumpage totals by manner of use, with updated values marked in orange. The corrections were made based upon various factors:

- Meter readings reported late
- Meters replaced during the year
- Field inspections identified reporter or staff error
- Adjustments for estimates where wells were pumped with broken meters
- Locked/inaccessible pumphouses prevented collection of meter readings during the inventory period
- Adjustments for wells pumped during November and December (after meter readings had been taken in the field)

Table of updated pumpage values (acre-feet) in Smith Valley.

ABSTRACT

This inventory represents the status and usage of all permitted, certificated and claims of vested right groundwater rights located within Smith Valley, Hydrographic Basin 9-107, for the calendar year 2016. Also included are tables, graphs and data associated with this use.

The data presented are valid for the period of this report and may vary from previously published figures as water rights within the basin are subject to administrative action, such as certification, cancellation, forfeiture or withdrawal on a continuing basis.

For calendar year 2016, the committed resource totaled 56,923 acre-feet, with estimated pumpage of approximately **28,248** acre-feet. This figure includes an estimated 812 acre-feet pumped from exempt domestic wells.

Irrigation is the largest manner of use within the basin. For calendar year 2016, appropriations for irrigation totaled 53,792 acre-feet, with pumpage of approximately 26,490 acre-feet. The second largest manner of use was domestic, with commitments totaling 1,624 acre-feet and pumpage of 812 acre-feet.

HYDROGRAPHIC BASIN SUMMARY

¹ Includes pumpage by exempt domestic wells as defined by NRS 534.013.

² Committed groundwater resource data are accurate for November 2016. Manner of use category totals vary over time, as rights are not necessarily static. Rights may be subject to change applications, certification, withdrawals, forfeiture and cancellations; each of these circumstances could affect the duty, diversion rate and acreage associated with a given right. The value associated with each manner of use category does not include those portions that have been relinquished in support of domestic wells. A query of the NDWR Well Log Database indicates that 812 domestic wells existed in the basin during calendar year 2016. This query is assumed to represent both appropriations and exempt domestic wells. The committed domestic water resource is considered to be 2 acre-feet per domestic well, or 1,624 acre-feet annually.

PURPOSE AND SCOPE

The purpose of this report is to inventory the groundwater resources allocated and described by the Office of the State Engineer, Nevada Division of Water Resources (NDWR), and to estimate the amount of groundwater pumped in Smith Valley for calendar year 2016. This report estimates the amount of groundwater pumped under the permits and certificates issued by the State Engineer, the vested claims to groundwater, and the amount pumped by exempt domestic wells within the basin.

DESCRIPTION OF THE STUDY AREA

Smith Valley is in west-central Nevada and east-central California. This report deals only with the Nevada portion of this basin. The Nevada portion of Smith Valley occupies approximately 464 square miles within Lyon and Douglas Counties. The adjacent hydrographic basins are Antelope Valley (9-106) and Carson Valley (8-105) to the west, Churchill Valley (8-102) to the north, Mason Valley (9-108) to the east, and the East Walker Area (9-109) to the east and south (Figure 1). The Smith Valley basin boundary is described by State Engineer's Orders 245 and 1177 issued by the Nevada State Engineer dated June 27, 1960 and July 8, 2005, respectively.

Smith Valley is bounded on the north by the Buckskin Range, to the east by the Singatse Range and the Pine Grove Hills, to the south by the Sweetwater Mountains, and to the west by the Wellington Hills and the Pine Nut Range

The dominant hydrologic features of Smith Valley are the West Walker River and Desert Creek. The West Walker River flows northeasterly across the middle of Smith Valley, and continues into Mason Valley where it joins the East Walker River. Desert Creek originates in the Sweetwater Range at Lobdell Lake within the southern portion of Smith Valley in California and flows north toward the West Walker River.

The U.S. Geological Survey (USGS) operates two streamflow gaging stations on the West Walker River near the locations where the river enters and exits Smith Valley, stations #10297500 (West Walker River at Hoye Bridge) and #10300000 (West Walker River at Hudson, NV), respectively. The USGS also operates a streamflow gaging station on Desert Creek #10299100 in the southern part of the basin near where the creek enters the valley.

GROUNDWATER LEVELS

Depths to groundwater are measured by NDWR on a semi-annual basis. The following are the site names and links to the data for active sites (Figure 2):

107 N10 E24 03BBAB1	107 N11 E23 23BCBB1	107 N10 E24 08CBCA1

107 N11 E23 03CBBC1		

Additional water level measurements and site data can be obtained from the NDWR website (<http://water.nv.gov>). The USGS also measures groundwater levels in the basin. These data are available from the USGS website at <https://waterdata.usgs.gov>.

METHODS TO ESTIMATE PUMPAGE

One of the purposes of this report is to estimate the amount of groundwater pumped under vested claims, permits and certificates issued by the State Engineer, as well as the amount pumped by the exempt domestic wells in the valley. Table 1 and Figure 3 show historical pumpage by manner of use; Figure 4 shows historical pumpage for irrigation compared with West Walker River stream flows; Figure 5 shows the percentage of water pumped by manner of use; and Figure 6 compares groundwater commitments and estimated pumpage by manner of use. The following methods were used to arrive at the estimated use:

- Where totalizing meters were in place, meter readings were taken and compared with previous data (if available).
- Where water rights owners are required to provide the Office of the State Engineer with monthly pumping totals as a condition of their permits, these reports are verified with meter readings taken by NDWR staff and used as the amount pumped.
- Where meters were not in place and the use was irrigation, pumpage was estimated by multiplying the number of hours the well was operated during the past year (determined from an hour meter reading or asking the water user) by the certificated diversion rate.
- Where totalizing meters were present, and irrigation was observed, but readings resulted in inconsistent usage figures, meter readings were interpolated/extrapolated to compute an estimated use. Where there were no flow meters or other reliable options for estimating pumpage and the use was irrigation, pumpage was estimated by dividing the Net Irrigation Water Requirement (NIWR) for the crop grown by the efficiency of the irrigation method used, then multiplying by the number of acres irrigated. Irrigation

efficiencies associated with three types of irrigation methods are pivot at 85%, wheel line or other hand moved sprinklers at 75%, and flood at 60%. The pumpage amount estimated by this method was limited by the duty of the permit. For places where the groundwater rights are supplemental to surface water, groundwater use was estimated using the NIWR method above, but adjusted based on available surface water for the year. Evapotranspiration and NIWR data by basin can be found on the NDWR website at: <http://water.nv.gov/Evapotranspiration.aspx>.

- Where meters were not present, previous data were not available, and the manner of use was not irrigation, pumpage was estimated by applying the annual duty associated with the certificate (if the water right was perfected), permit or claim, if the use was as described in the certificate, permit or claim. If the use was not as described in the certificate, permit or claim, a value was estimated based upon the circumstances of use for the subject year.
- Pumpage estimates for stockwater wells were derived from information from the Bureau of Land Management's [Rangeland Administration System](#), documentation from the water right files, and the certificated duty for the water right.
- Exempt domestic wells may be drilled and utilized where water service from a purveyor is not available. These types of wells do not require a permit from the State Engineer if they do not pump more than 2 acre-feet per year as provided by Nevada Revised Statutes (NRS) [534.180](#). [NRS 534.013](#) defines this category of domestic use as follows: *“Domestic use or domestic purposes extends to culinary and household purposes directly related to a single family dwelling, including, without limitation, the watering of a family garden and lawn and the watering of livestock and any other domestic animals or household pets.”* The number of exempt domestic wells in the basin was determined by a query of the NDWR Well Log Database. The amount of water pumped annually by exempt domestic wells is estimated to be 1 acre-foot per well in Smith Valley, or 812 acre-feet.

**APPENDIX A. SMITH VALLEY 2016 GROUNDWATER PUMPAGE BY
APPLICATION NUMBER**

EXPLANATION OF COLUMN HEADINGS FOR GROUNDWATER PUMPAGE BY APPLICATION NUMBER

SITE NAME	An ID assigned to each well, based on its geographic location.
APP NO.	The file number of the Application to Appropriate/Change Water.
STATUS	Indicates if the application is a Permit (PER) or if it has been certificated. If an application has been certificated, the Certificate number will be listed in the column.
MOU	The manner of use of the appropriated water. COM- Commercial IRR- Irrigation CON - Contruction MM- Mining & Milling DOM- Domestic QM- Quasi-Municipal ENV- Environmental REC- Recreational IND- Industrial STK- Stockwater
OWNER OF RECORD	The owner of the water right as recorded in the files of the State Engineer. A water right may have more than one owner of record.
QQ	The quarter quarter of the section in which the point of diversion is located.
QTR	The quarter of the section in which the point of diversion is located.
SEC	The section in which the point of diversion is located.
T	The township in which the point of diversion is located.
R	The range in which the point of diversion is located.
PER. ACRES	The number of acres that are permitted to be irrigated.
DUTY (AF)	The number of acre-feet of water that the permittee may pump. One acre-foot equals 325,851 gallons.
SUPP ADJ	Where more than one permit is appurtenant to the same place of use, the permits are considered supplemental. Permits may be either completely or partially supplemental. In these cases, a total combined duty for the subject permits is employed.
DUTY USED	The amount of water used during the calendar year, in acre-feet, as determined by review of records and/or field investigation. A “-“ in this field indicates that pumpage was attributed to a senior supplemental permit or certificated water right.
UNITS	AFA stands for acre-feet annually, and AFS stands for acre-feet seasonally. AFS limits water usage to certain months out of the year.
SUPP GW APP NO.	The file number(s) of the supplemental water appropriations. Supplemental application Groups are listed at the end of Appendix A.
