## ABSTRACT

This inventory represents the status and usage of all permitted, certificated and claims of vested right groundwater rights located within Smith Valley, Hydrographic Basin 9-107, for the calendar year 2019 (January 1, 2019 through December 31, 2019). Also included are tables, graphs and data associated with this use.

The data presented are valid for the period of this report and may vary from previously published figures as water rights are subject to administrative action, such as transfer, certification, cancellation, forfeiture, relinquishment or withdrawal on a continuing basis.

For calendar year 2019, the committed groundwater resource totaled 58,798 acre-feet, with estimated pumpage of approximately **17,270 acre-feet**. This figure includes an estimated 826 acre-feet pumped from exempt domestic wells.

Irrigation is the largest manner of use within the basin. For calendar year 2019, pumpage for irrigation water use totaled 15,447 acre-feet, with appropriations totaling 55,464 acre-feet. The second largest manner of use was pumping by exempt domestic wells, estimated at 826 acre-feet.

## HYDROGRAPHIC BASIN SUMMARY

HYDROGRAPHIC BASIN NUMBER	107, REGION 9	
HYDROGRAPHIC BASIN NAME	SMITH VALLEY	
COUNTIES	LYON, DOUGLAS	
MAJOR COMMUNITIES	SMITH, WELLINGTON	
DESIGNATED BASIN	YES	
DENIALS BASED UPON WATER AVAILABILITY	ALL USES EXCEPT AS LISTED UNDER STATE ENGINEER'S ORDER NO. 1271	
GROUNDWATER LEVEL MEASUREMENTS	NDWR & USGS	
PUMPAGE ESTIMATED IN 2019 (ACRE-FEET)	17,270 <sup>1</sup>	
STATE ENGINEER'S ORDERS		
<a href="#"><u>NO. 245 – PARTIAL DESIGNATION OF BASIN</u></a>	DATE: JUNE 27, 1960

<sup>1</sup> Includes pumpage by exempt domestic wells as defined by NRS 534.013.

<sup>2</sup> Committed groundwater appropriations are for October 2019. Data are not static, as rights are subject to transfer, certification, withdrawal, forfeiture, relinquishment and cancellation. A query of the NDWR Well Log Database indicates that 826 domestic wells existed in the basin during calendar year 2018. This query is assumed to represent both appropriations and exempt domestic wells. The committed domestic water resource is considered to be 2 acre-feet per domestic well, or 1,652 acre-feet annually.

## **PURPOSE AND SCOPE**

The purpose of this report is to inventory all of the groundwater resources allocated and described by the Office of the State Engineer, Nevada Division of Water Resources (NDWR). The estimated amount of groundwater pumped under permits, certificates, vested claims, and exempt domestic wells within Smith Valley, Hydrographic Basin 9-107, for calendar year 2019 is described in the following sections.

## **DESCRIPTION OF THE STUDY AREA**

Smith Valley is in west-central Nevada and east-central California. This report deals only with the Nevada portion of this basin. The Nevada portion of Smith Valley occupies approximately 464 square miles within Lyon and Douglas counties. The adjacent hydrographic basins are Antelope Valley (9-106) and Carson Valley (8-105) to the west, Churchill Valley (8-102) to the north, Mason Valley (9-108) to the east, and the East Walker Area (9-109) to the east and south (Figure 1). The Smith Valley basin boundary is described by State Engineer's Orders 245 and 1177, dated June 27, 1960 and July 8, 2005, respectively.

Smith Valley is bounded on the north by the Buckskin Range, to the east by the Singatse Range and the Pine Grove Hills, to the south by the Sweetwater Mountains, and to the west by the Wellington Hills and the Pine Nut Range.

The dominant hydrologic features of Smith Valley are the West Walker River and Desert Creek. The West Walker River flows northeasterly across the middle of Smith Valley and continues into Mason Valley where it joins the East Walker River. Desert Creek originates in the Sweetwater Range at Lobdell Lake within the southern portion of Smith Valley in California and flows north to join the West Walker River in south-central Smith Valley.

The U.S. Geological Survey (USGS) operates two streamflow gaging stations on the West Walker River near the locations where the river enters and exits Smith Valley, stations #10297500 (West Walker River at Hoyer Bridge) and #10300000 (West Walker River at Hudson, NV), respectively.

## **GROUNDWATER LEVELS**

Depths to groundwater in Smith Valley are measured by NDWR semi-annually, and also reported by other entities. Data for active monitoring well sites (Figure 2) can be found on NDWR's website at <http://water.nv.gov/WaterLevelData.aspx>, or via the Nevada Hydrology Data Mapping Application, accessible at <http://water.nv.gov/mapping.aspx>. Groundwater level data are also collected by USGS and may be accessed through their website at <https://waterdata.usgs.gov/nv/nwis/gw>.

## METHODS TO ESTIMATE PUMPAGE

One of the purposes of this report is to estimate the amount of groundwater pumped under vested claims, permits and certificates issued by the State Engineer, as well as the amount pumped by the exempt domestic wells in the valley. Table 1 and Figure 4 show historical pumpage by manner of use; Figure 3 shows historical pumpage for irrigation compared with West Walker River stream flows; Figure 5 shows the percentage of water pumped by manner of use; and Figure 6 compares groundwater commitments and estimated pumpage by manner of use. The following methods were used to arrive at the estimated use:

- Where totalizing meters were in place, meter readings were taken and compared with previous data (if available).
- Where water rights owners are required to provide the Office of the State Engineer with monthly pumping totals as a condition of their permits, these reports are verified with meter readings taken by NDWR staff and used as the amount pumped.
- Where meters were not in place and the use was irrigation, pumpage was estimated by multiplying the number of hours the well was operated during the past year (determined from an hour meter reading or asking the water user) by the certificated diversion rate.
- Where totalizing meters were present, and irrigation was observed, but readings resulted in inconsistent usage figures, meter readings were interpolated/extrapolated to compute an estimated use. Where there were no flow meters or other reliable options for estimating pumpage and the use was irrigation, pumpage was estimated by dividing the Net Irrigation Water Requirement (NIWR) for the crop grown by the efficiency of the irrigation method used, then multiplying by the number of acres irrigated. Irrigation efficiencies associated with three types of irrigation methods are pivot at 85%, wheel line or other hand moved sprinklers at 75%, and flood at 60%. The pumpage amount estimated by this method was limited by the duty of the permit. For places where the groundwater rights are supplemental to surface water, groundwater use was estimated using the NIWR method above, but adjusted based on available surface water for the year. Evapotranspiration and NIWR data by basin can be found on the NDWR website at: <http://water.nv.gov/Evapotranspiration.aspx>.
- Where meters were not present, previous data were not available, and the manner of use was not irrigation, pumpage was estimated by applying the annual duty associated with the certificate (if the water right was perfected), permit or claim, if the use was as described in the certificate, permit or claim. If the use was not as described in the certificate, permit or claim, a value was estimated based upon the circumstances of use for the subject year.
- Pumpage estimates for stockwater wells were derived from field investigations, information from the Bureau of Land Management's [Rangeland Administration System](#), documentation from the water right files, and the certificated duty for the water right.
- Exempt domestic wells may be drilled and utilized where water service from a purveyor is not available. These types of wells do not require a permit from the State Engineer if they do not pump more than 2 acre-feet per year as provided by Nevada Revised Statutes (NRS) [534.180](#). [NRS 534.013](#) defines this category of domestic use as follows: *“Domestic use or domestic purposes extends to culinary and household purposes directly related to a single family dwelling, including, without limitation, the watering*

*of a family garden and lawn and the watering of livestock and any other domestic animals or household pets.”* The number of exempt domestic wells in the basin was determined by a query of the NDWR Well Log Database. The amount of water pumped annually by exempt domestic wells is estimated to be 1 acre-foot per well in Smith Valley, or 826 acre-feet.

STK - Stockwater	STO - Storage	WLD – Wildlife														
OWNER OF RECORD	The owner of the water right as recorded in the files of the State Engineer. A water right may have more than one owner of record.															
QQ	The quarter quarter of the section in which the point of diversion is located.															
QTR	The quarter of the section in which the point of diversion is located.															
SEC	The section in which the point of diversion is located.															
T	The township in which the point of diversion is located.															
R	The range in which the point of diversion is located.															
PER. ACRES	The number of acres that are permitted to be irrigated.															
DUTY (AF)	The number of acre-feet of water that the permittee may pump. One acre-foot equals 325,851 gallons.															
SUPP ADJ	Where more than one permit is appurtenant to the same place of use, the permits are considered supplemental. Permits may be either completely or partially supplemental. In these cases, a total combined duty for the subject permits is employed.															
DUTY USED	The amount of water used during the calendar year, in acre-feet, as determined by review of records and/or field investigation.															
UNITS	AFA stands for acre-feet annually, and AFS stands for acre-feet seasonally. AFS limits water usage to certain months out of the year.															
SUPP GW APP NO.	The file number(s) of the supplemental water appropriations.
