Nevada Ranked Items within United States: 2007 Census of Agriculture

Item	Quantity	U.S. Rank ¹
Market Value of Agricultural Products Sold (\$1,000)		
Total Value of Agricultural Products Sold	513,269	46
Value of Crops Including Nursery and Greenhouse	219,341	43
Value of Livestock, Poultry and their Products	293,928	42
Value of Sales by Commodity Group (\$1,000)		
Grains, Oilseeds, dry beans, and dry peas	8,455	44
Vegetables, melons, potatoes and sweet potatoes	56,356	33
Nursery, greenhouse, floriculture, and sod	11,949	48
Other crops and hay	141,930	22
Cattle and calves	181,758	37
Milk and other dairy products from cows	98,526	33
Sheep, goats, and their products	7,003	26
Horses, ponies, mules, burros, and donkeys	3,370	44
Other animals and other animal products	898	47
Top Crop Items (acres)		
Forage - land used for all hay, haylage, grass silage, and greenchop	464,598	34
Wheat for grain, all	12,826	40
Vegetables harvested for sale	11,217	37
Potatoes	7,491	18
Field and grass seed crops, all	6,498	15
Top Livestock Inventory Items (number)		
Cattle and calves	441,629	37
Sheep and lambs	68,581	24
Horses and ponies	18,396	42
Goats, all	11,894	37
Layers	5,852	49

¹ Universe is number of states in U.S. with item.

Operator Characteristics: 2007 Census of Agriculture

Operator Characteristics	Quantity	Operator Characteristics	Quantity
Principal operators by primary occupation:		All Operators by race ¹ :	
Farming	1,650	American Indian or Alaska Native	488
Other	1,481	Asian	14
		Black or African American	4
Principal operators by sex:		Native Hawaiian or Other Pacific Islander	5
Male	2,530	White	4,420
Female	601	More than one race	38
Average age of principal operator (years)	57.5	All operators of Spanish, Hispanic or Latino Origin ¹	260

¹ Data were collected for a maximum of three operators per farm.

Nevada Tribal Lands

Native Americans, both on and off reservation lands, contribute significantly to the agricultural production of Nevada. Farms operated by Native Americans identified in the 2007 Census of Agriculture accounted for 18.3 percent of all non-federal land in farms in the State. A total of 390 farms had American Indian principal farm operators.

Crop Weather Summary: 2011

January: Mild weather dominated the state in January. Temperatures across the state varied from 2.5 degrees below normal to 5.4 degrees above normal. Ely recorded the lowest temperature at -20 degrees. Las Vegas recorded the highest temperature of the month at 74 degrees. All weather stations reported some precipitation. Winnemucca recorded the most precipitation with 0.28 inches. Snow cover created the need for additional supplemental feeding of northern range livestock. Cattle marketing continues. Winter wheat is in good condition. Onions continued to be shipped from climate controlled storage. Despite warm weather, most Nevada snow packs are at or above normal levels for this time of year.

February: February storm systems brought rain and snow to most Nevada locations improving mountain snowpacks. Temperatures ranged from 5.1 degrees below normal to 0.1 degrees above normal. Las Vegas recorded the monthly high at 71 degrees. Ely recorded the lowest temperature of the month at -10 degrees. Reno and Winnemucca recorded the most precipitation with 1.35 inches. Nevada snowpacks are 116 to 175 percent of average. Supplemental feeding of range livestock continued. Winter wheat is in good condition. Other farm and ranch activities included: equipment maintenance, calving and lambing, crop and livestock marketing, industry meetings.

March: Several storms crossed the State during March bringing rain and snow. Temperatures ranged from 1.2 degrees below normal to 2.4 degrees above normal. Las Vegas recorded the monthly high at 88 degrees. Winnemucca recorded the lowest temperature of the month at 8 degrees. Winnemucca recorded the most precipitation with 2.06 inches. All weather stations recorded some precipitation. Nevada snowpacks are 124 to 157 percent of average. Consistent wet conditions slowed or prevented field crop seeding during the month. Supplemental feeding of range livestock continued. Winter wheat is in good condition. Other farm and ranch activities included: equipment maintenance, spring calving, fence repairs, crop and livestock marketing.

April: April began with mostly warm spring like days and above normal temperatures. This quickly gave way to several cold low pressure systems that brought breezy conditions and scattered precipitation. Temperatures ranged from 4.0 degrees below normal to 0.5 degrees above normal. Las Vegas recorded the monthly high at 93 degrees while Elko only reached a high of 72 degrees. Ely recorded the lowest temperature of the month at 10 degrees. Ely recorded the most precipitation with 2.07 inches. Nevada river basin snow water content range from 173 to 238 percent of average. Cold temperatures slowed pasture and range growth. Field preparations and spring grain planting were slowed by wet fields. Livestock were beginning to move to spring grazing lands. Calving and lambing advanced and were nearing completion. Main farm and ranch activities: ditch burning, calving, lambing, branding, grain planting, weed spraying, and dragging meadows.

May: Winds continued to blow throughout the month as cold low pressure storm systems crossed the State. These systems brought strong winds, cool temperatures, rain and some snow. Temperatures ranged from 2.0 to 6.1 degrees below normal for the month. Las Vegas recorded the monthly high at 96 degrees while Ely only reached a high of 76 degrees. Ely also recorded the lowest temperature of the month at 16 degrees. All weather stations recorded some precipitation. Ely recorded the most precipitation with 2.67 inches. Crop and forage growth was slowed due to the cold conditions. Pasture and range conditions were fair to good due to cold weather slowing growth. Spring planted grains began to emerge. Potato and onion planting was well underway. Livestock were being moved to spring grazing lands. Main farm and ranch activities: planting, fertilizing, ditch burning, irrigating, branding, weed and insect control, and equipment maintenance.

June: The month started off cool and temperatures remained mild for most of the month. Temperatures warmed into the low 90's late in the month. Temperatures ranged from near normal to 4.8 degrees below normal. Las Vegas recorded the high of 110 degrees. Eureka had the lowest temperature of the month at 21 degrees. Elko, Ely, and Winnemucca also recorded lows in the twenties. Precipitation was scattered during the month. Reno recorded the most precipitation with 1.35 inches. Crop conditions were generally good, but cold nighttime temperatures slowed crop and forage progress. Garlic, onions, and potatoes were in good to excellent condition. First cutting of alfalfa hay was under way in the north. Main farm and ranch activities: haying, irrigating, weed and insect control, and equipment maintenance.

Crop Weather Summary: 2011 (continued)

July: The month of July was fairly warm across the State. Most weather stations recorded monthly average temperatures above normal. Only two stations were about 1 degree below normal. Las Vegas recorded the high of 111 degrees, Winnemucca and Reno also hit 100 degrees. Winnemucca also had the lowest temperature of the month at 40 degrees. Thunderstorms and precipitation were scattered. Reno only recorded a trace amount of precipitation. Far short of last month's high. Ely recorded the most with 1.50 inches. Pasture and range conditions are mostly in good to excellent condition. Hay producers finished the first cutting and started the second cutting. Range livestock were foraging seasonal pastures and ranges. The main farm and ranch activities were irrigating, haying, weed and insect control, and equipment maintenance.

August: August was hot and dry across Nevada. Temperature ranged from 0.5 to 5.7 degrees above normal, with most stations coming in 3 degrees above normal. Las Vegas recorded a high of 112. Other weather stations recorded highs in the upper nineties. Winnemucca and Eureka recorded a low of 39 degrees. Thunderstorms and precipitation were scattered. Eureka recorded the most precipitation with 0.38 inches. Small grain harvest was complete by month's end. Potatoes were in good condition. Hay producers finished the second cutting and started the third cutting. Pasture and range conditions were mostly good to excellent, some drying out at lower elevations. Range livestock were foraging seasonal pastures and ranges. Main farm and ranch activities were irrigating, hay harvest and shipping, weed and insect control, and equipment maintenance.

September: The State's weather was dominated by high pressure systems that brought above normal temperatures and some thunderstorms. Temperatures averaged from 8.2 degrees above normal in Reno to 1.4 degrees above normal in Las Vegas. This was the warmest September in Reno since 1888. Las Vegas had the highest temperature of 105 degrees. Winnemucca recorded a low of 30 degrees. Most of the precipitation occurred around the middle of the month. All stations recorded some precipitation. Ely recorded the most with 1.33 inches, 0.5 inches above normal. Reno record the least precipitation with 0.03 inches, 0.42 inches below normal. Range conditions were starting to decline seasonally, with most being in good to fair condition. Alfalfa second cutting mostly concluded during September and third cutting started. Onion and potato harvest was underway. The main farm and ranch activities were weed and insect control, hay harvest and shipping, equipment maintenance, and preparing for fall-seeded crops.

October: The month of October started off with a low pressure system moving through the State. This brought some rain around the fifth of the month. High pressure systems returned to the area bring warm temperatures for the remainder of the month. Temperatures were above normal averaging between 1.0 and 4.4 degrees above normal. Las Vegas recorded the high of 95 degrees. Most other stations recorded highs in the mid to low 80's. By the middle of October most areas of the State were experiencing frost at night. Eureka recorded a low of 8 degrees. All stations recorded some precipitation. Ely recorded the most with 1.16 inches. Pasture and range conditions were declining seasonally, with most being in good to fair condition. Alfalfa production continued with the extended warm weather. Some northern Nevada producers went for a 4th cutting. Most crop harvest concluded. Seasonal onions were being taken to sheds for sorting, bagging, and shipping. Livestock producers worked to gather livestock for market and to move herds to winter pastures. Main farm and ranch activities include: harvest of hay, weed control, equipment maintenance, and planting of fall-seeded crops.

November: November started off with a storm system moving across the State bringing cold temperatures and wind. High pressures systems dominated the middle of the month bringing warmer temperatures. The month of November ended with another storm system bringing more cool temperatures and wind. Las Vegas recorded the monthly high of 79 degrees. Ely recorded the lowest temperature of the month at 0 degrees. Precipitation was below normal and scattered during the month. Winnemucca recorded the most precipitation with 0.50 inches. Nevada farmers and ranchers generally completed most field work by month's end. Cattle movement slowed throughout the month as ranchers moved livestock to market and winter pastures. Late season hay harvest finished. Seasonal onions were being taken to sheds for sorting, bagging, and shipping. Main farm and ranch activities include: weed control, equipment maintenance, and planting of fall-seeded crops.

December: December temperatures were near normal for the month. Precipitation was well below normal. Temperatures ranged from 4.2 degrees below normal to 1.2 degrees above normal. Winnemucca recorded the low of the month at -9 degrees. Ely recorded the most precipitation with 0.22 inches. Reno, Eureka and Tonopah recorded no precipitation. Elko and Winnemucca recorded very little precipitation. Onion and potato processing was ongoing. Main farm and ranch activities include: equipment maintenance and feeding livestock.

Total Cash Receipts, Percent by Commodity – Nevada: 2011

Value Added to the U.S. Economy by the Agricultural Sector:

The value-added format is used to present the income accounts. Changes in commodity production is the cause of most of the volatility in the income accounts and the presence of more disaggregated components under the value-added format makes it much easier to discern what forces are driving the changes and trends in farm income. In addition, the value-added approach to the sector accounting has the advantage of being the format accepted and utilized internationally, thereby enabling comparison across countries, and is consistent with that employed by the Organization for Economic Cooperation and Development. Due to the large size of the value added worksheet, the value of agricultural sector products and net government transactions are broken out in the following tables. Net value added and net farm income calculations are shown on the next page.

Value of Agricultural Sector Production – Nevada: 2007 to 2011

Item	2007	2008	2009	2010	2011
	\$1,000	\$1,000	\$1,000	\$1,000	\$1,000

Value of agricultural sector production	578,503	660,426	648,064	675,584	809,417

¹ Value of agricultural sector production is the gross value of the commodities and services produced within a year. ² A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales. Onions

Over 80 percent of the land area in Nevada is federally controlled public land. Much of this area is arid rangeland with limited potential for use. The grazing of range livestock has historically been and continues to be the most efficient means of harvesting rangeland grasses, a renewable resource. Cattle are the most common agricultural enterprise in Nevada and can be found on over half of the farms and ranches in the state. Sheep numbers have trended downward for several decades, but they remain a viable alternative on many ranges.

How to Get NASS's Statistical Information on the Web

The USDA-NASS web site is <http://www.nass.usda.gov/>

USDA data and estimates of production, supply, prices, and associated information are available from the web site. The NASS Agricultural Statistics Board releases approximately 400 national reports each year covering at least 120 crops and 45 livestock items. The NASS web site provides easy access to national and state reports, data, graphics, and agency information.

On-line database: Quick Stats offers the ability to query by commodity, state(s) and year(s), providing the most up-to-date statistics including all revisions. The query dataset can be downloaded for easy use in your database or spreadsheet. Quick Stats is accessible directly from the homepage or the Data and Statistics tab.

Statistics by state: State specific releases are available through this link to NASS's 46 field offices. They are accessible on the left side of the homepage or through the Publications tab.

Publications: NASS national reports can be browsed from the homepage or the Publications tab. Electronic access is provided free of charge. Fees are charged for printed publications which are accessible through the Publications tab.

Subscriptions by E-mail: All of NASS's national reports are available free of charge via e-mail within 3 hours of official release. To subscribe to reports electronically, click on the Publications tab at the NASS Homepage then select either national or state releases under "Receive reports by e-mail" on the right side of the screen.

For additional assistance please contact the NASS Agricultural Statistics Hotline 1-800-727-9540 or any field office. We are here to provide you with the statistical information you need.

NASS CONFIDENTIALITY PLEDGE

1. Names, addresses, and personal identifiers are fully protected by NASS with the force of law.

After data collection, the National Agricultural Statistics Service (NASS) processes the data independent of names and addresses. Original paper questionnaires are kept in a secure area, and then destroyed as prescribed by law. Names, addresses, phone numbers, and other personal identifiers are held securely by NASS and used only to conduct official business. Title 7, U.S. Code, Section 2276 and the Confidential Information Protection and Statistical Efficiency Act prohibit public disclosure of individual information. Personal information, including reported data, is protected from legal subpoena and Freedom of Information Act requests.

2. Only authorized persons working for NASS as employees or sworn agents, who are subject to fines and imprisonment for unauthorized disclosure, can access individual record data and only for approved official purposes.

All information collected by NASS about individuals or operations under a pledge of confidentiality is protected by law. Every person working for or in cooperation with NASS – from the Agency Administrator to the person collecting the information – signs a confidentiality form which states that no confidential reported information will be compromised. This includes sworn agents who are authorized by NASS to provide data collection support or statistical research. Any offender is subject to a jail term (5 years), a fine (\$250,000), or both.

3. Data security is a top priority during preparation of NASS reports.

Official USDA statistics issued by the NASS Agricultural Statistics Board (ASB) are prepared under tight security until public release of the reports at preannounced dates and times. The ASB restricts prerelease access to and communication about survey and census results. In many cases, a locked area with a uniformed guard is employed to prevent premature disclosure of market-sensitive information. NASS official statistics are released to everyone at the same time. Reports are available on the Internet within seconds of the scheduled release.

4. Published statistics from NASS surveys and censuses will not disclose reported data from an individual.

Individual participants in a NASS survey can rest assured that summary data will not be published in a way that would identify them or data for their operation without their written permission. For instance, if only one farm in a county produced a particular crop, then NASS will protect the privacy of that individual farm by combining the data for that crop with reports from other counties to publish only combined totals.

When NASS Collects Data for Other Statistical Purposes:

1. NASS will clearly communicate to participants the survey purpose, the names of any cooperating sponsors, how the data will be used, and the confidentiality protections provided.

Data collection for other agencies under the NASS pledge of confidentiality will afford the same protections described in 1 through 4 above. Data collected for analysis by a sponsoring agency will have all personal identifiers, such as name, address, and telephone number, removed before access by the analyst. Analysts will sign confidentiality statements as sworn NASS agents. Results of the study are released to everyone free of charge. No organization is given ownership of the data, to eliminate the possibility of its having an advantage over others. NASS will not conduct a survey for private, proprietary purposes.

2. Some data collected by NASS are required by law and subject to audit.

Requests for data required by law and subject to audit will clearly indicate that the reports have different confidentiality protections than described earlier since the data may be audited. NASS and the participating authority that conducts the audits will protect individually reported data to the maximum extent provided under the law, and will work directly with reporting entities to resolve discrepancies discovered in the audit process. Summary statistics are provided to the USDA agency responsible for administering the specific programs that rely upon the required data. Program results are released at the discretion of the administering agency without revealing data reported from an individual.
