Weather 2016 – Wet Spring / Dry Summer

Notable Weather Events

- Precipitation was well above normal in Southern Idaho/Wyoming in March, with much drier weather from May through August. Precipitation was also well above normal over much of Nevada, Utah and the Arizona Strip in April, with near to above normal snowpack in all areas.
- Very warm temperatures began in April over the northern half of the Great Basin. Temperatures cooled to well below normal in May before a very hot June in all areas of the Great Basin. Temperatures returned closer to normal through July and August, and dropped below normal by September.
- Drought conditions continued to improve in all areas through the spring and early summer.
- Fine fuel growth over the northern half of Nevada and Utah was reported at 2-3 times what has occurred in recent years and near to just above normal over southern Idaho due to the wet spring weather.
- Very warm and dry weather in June accelerated the curing process in most areas, with the exception of southern and eastern Nevada, which remained wetter than normal.
- Precipitation dropped to well below normal by July and August in many areas, with the exception of wetter conditions in far Southern Nevada, Southern Utah and the Arizona Strip. Some areas of northern and western Nevada did not see any wetting rainfall for nearly 3 months.
- Significant lightning in late July produced new large fires and the potential for holdovers. Increased fire activity continued through August into early September as several

unseasonably strong low pressure troughs brought widespread gusty to strong winds to the northern 2/3 of the Great Basin; along with periodic monsoon moisture surges over mainly southern areas with drier lightning further north.

- In mid-September, a surge of remnant tropical moisture from the Eastern Pacific brought significant rainfall to central and northeast Nevada into northern Utah, southern Idaho and Wyoming, ending fire season.
- Large fire activity briefly reemerged in western Nevada in mid-October due to multiple very strong wind days, but was followed by a very wet season ending event for the Sierra into western Nevada, which had remained exceptionally dry most of the summer. Significant rainfall also occurred during this time for the northern third of the Great Basin.

Southern Idaho/Wyoming:

ERC's peaked the latter half of July through August, while setting new records before dropping to below normal in September. Live fuel moisture also hit record lows.

Wrn/Nrn NV/Sierra

Front/Northern Utah:

ERC's peaked the latter half of July through August, while setting new records before dropping to below normal in September. Live fuel moisture also hit record lows.

Southern Great Basin:

ERC's peaked throughout July due to an unusually dry period, then dropped to near normal in August as wetter weather returned. Drier weather allowed ERCs to increase again in October.

Season Review

Fire Summary for the Great Basin

Great Basin had a slightly below average year for fire occurrence as well as for total acres burned during 2016. To date, there were 2,063 fires reported, burning a combined total acres of 761,622.

	Arizona Strip		Idaho		Nevada		Utah		Wyoming (GB)		Total

GB comparison with Historical Averages

The Great Basin Geographic Area was within 81% of the 5 year average and 69% of the 20 year average for fire starts. However, 2016 produced the **least amount of starts** in any season since we have been keeping records beginning in 1994. Acres burned were at 77% of the 5 year average and 71% of the 20 year average.

Preparedness Level Review

Great Basin's Preparedness Level was elevated from 1 to 2 on June 8, incidentally two weeks earlier than the 2015 season, however this timeframe is consistent with historical Preparedness Levels.

On July 3rd, the Great Basin's preparedness level was increased to PL 3 in conjunction with a spike in initial attack and resource commitment. We held at PL 3 until July 25th when we changed to PL 4. The Great Basin remained at PL 4 for 41 days!

National Preparedness level markers are included on the display below to illustrate how the national situation was fairly consistent with the conditions experienced in the Great Basin.

Year End Totals by Cause

Fire statistics for this report were pulled from the SIT Report. The statistics have not been reconciled with 1202s or FIRESTAT. Great Basin reported 2,063 fires for 761,622 acres. 1251 of those starts were human caused while 812 were natural fires. There was a spike in human caused fires during 2016. Historically, 40% of all fires reported are human caused, this season 61% of our total fires were human caused.

Year	Human Caused		Lightning Caused		Totals	
	Fires	Acres	Fires	Acres	Fires	Acres
2016	1,251	333,318	812	428,304	2,063	761,622

Dry Creek

Summary of Fire Activity by Dispatch Center

Large Fire Occurrence by Month

The first large fire of the year was the Wees incident in Owyhee County in Idaho. The Wees fire was a 192 acre human caused fire located 6 miles south southeast of Marsing, Idaho. It started June 5th just shy of 2 months later than our first large fire in 2015.

The largest fire of the year was the Pioneer. The Boise National Forest fire, whose cause is still under investigation, was 18 miles north of Idaho City, ID started on July 19th, contained and controlled on November 3rd and declared out January 24, 2017.

The graph below shows large fire activity by month. The numbers align with the normal pattern for large fire occurrence within the Great Basin. The exception was the "late start" to the typical large fire season illustrated by the single large fire during the months of March through May.

Pioneer August 31st

Fire Activity Map

Large Fire Activity Review

Per the National Mobilization Guide, a large fire is a wildland fire managed for complete perimeter control (Full Suppression) that is 100 acres or larger in timber fuel types and 300 acres or larger in grass or brush fuel types. There are other incidents that require ICS-209s, but the chart below includes only fires that meet the 100+/300+ description and are sorted by start date of the incident.

Prescribed Fire Review

The following statistics display prescribed fires and acres burned by units as reported on the Daily Situation Report within the FAMWEB Program. Only agencies who reported prescribe fires and acres to the FAMWEB Situation Report Program are represented in the chart below. Compared to 2015, there were 54 less ignitions, but an additional 16,066 acres accomplished in 2016.

Resource Order Summary

During 2016, the dispatch community in the Great Basin entered 86,333 requests, 1,860 orders that were deleted, and were able to fill 69,479 or approximately 80% of requests. There was a 62% increase in requests entered into the system compared to 2015 and most notably, a 69% increase in filled overhead requests.

Equipment Summary for Contract Equipment

Overhead Resource Order Summary

The overhead summary includes all positions that were ordered within the geographic area as well as resource orders filled with GB resources that traveled to incidents outside of the Great Basin geographic area. Data was pulled from ROSS/Cognos reports.

Great Basin MAC Group

The Great Basin Multi-Agency Coordinating (MAC) Group was activated from July 30th - September 6th during the 2016 fire season.

Area Command & National Incident Management Org - NIMO

Great Basin did not host and Area Command Team in 2016, but did host Reinarz's NIMO team for 20 days on the Saddle incident on the Dixie National Forest.

UT-CDC	UT-DIF-000219	SADDLE	TEAM - IMT - NIMO - REINARZ (VA-VIC)	VA-VIC	6/20/16	7/9/16	20

Type 1 Incident Management Teams

During the 2016 fire season, the Great Basin mobilized our Type 1 Incident Management Teams on four separate occasions within the geographic area. Two to Pioneer, one to Pioneer North and one to Little Valley. The Great Basin hosted the Southern Area Type 1 Incident Management Team on the Pioneer incident. Additionally, both of the Great Basin Type 1 IMTs were mobilized to incidents outside of the geographic area – to the Rocky Mountain geographic area.

Type 2 Incident Management Teams

This fire season, the Great Basin Type 2 Incident Management Teams were mobilized to 17 assignments. The initial mobilization was Bird's Team on July 4th to the Hot Pot fire in Nevada. This was 14 days after the initial mobilization in 2015. The final mobilization for the season was Chadwick's Team. Chadwick was assigned to KICC Support in Kentucky bringing the combined total days on assignment for all of our IMT2s to 181 days. This number is 9 days less than last season and is consistent with the normal range for days assigned for teams hosted by the Great Basin Coordination Center.
