Weather 2017 – Wet Spring / Dry Summer

Notable Weather Events

- Precipitation was above normal to near record levels in Southern Idaho, Western Wyoming, Northern Nevada and Northwest Utah. Much above normal snowpack in most mountains, with drought conditions becoming non-existent across the region.
- Fine fuel growth over the northern half of Nevada, Southern Idaho and pockets of Northwest Utah was reported to be the most in recent years due to the near record wet winter/spring.
- Hot/Dry conditions began in May-June over the southern half of the Great Basin. Fuels reached critical levels by early June across the AZ Strip, and the southern half of UT/NV.
- Very warm and dry weather in June thru early July pushed fuels to critical levels across the rest of Northern NV/UT and Southern ID. Slow start to fire season northern areas due to snowpack and late winter/spring wetness.
- Several significant lightning events from late June thru July produced significant large fire outbreaks across Northern NV and SW ID. Increased fire activity across Northern UT.
- As monsoon moisture gradually diminished fire activity in southern areas of the Great Basin, much hotter/drier conditions developed across Idaho into the Northern Rockies. Large fire activity gradually increased across the mountains of Central Idaho late July thru August and into early September. Live fuels remained green enough across far Ern ID and Western WY to keep fire activity below normal.
- Several prolonged, wet storm systems in mid-September diminished fire activity across most of the Great Basin.

Southern Idaho/Wyoming:

A slow start thru June, ERC's rose to normal levels early July, peaking near record levels early Aug, remaining above normal to early Sep before season ending rains.

Western/Northern NV/Sierra Front/Northern Utah:

ERC's were near seasonal normal from June thru early August but at high enough levels to combine with record fine fuel crop to produce near record fire activity.

Southern Great Basin:

ERC's surged to above normal levels thru early July, but retreated to below normal levels by mid July-Aug as wet weather returned. Brief drying late August before fuels moistened to end the season.

Season Review

Fire Summary for the Great Basin

Great Basin had an above average year for fire occurrence and above average for total acres burned during 2017. To date, there were 3,126 fires reported, burning a combined total acres of 2,103,787.

Great Basin Comparison with Historical Averages

The Great Basin Geographic Area was 125% of the 5 year average and 103% of the 20 year average for fire starts. 2017 far exceeded the 5 year average of acres burned, burning 235% of the 5 year average and 179% of the 20 year average. It should be noted, however, GB did not approach the number or acres burned in 2007 which were 3,301,599.

**2017 Fire Occurrence VS
5, 10 & 20 Year Avg.**

2017 VS Average Acres Burned

Preparedness Level Review

Great Basin's Preparedness Level was elevated from 1 to 2 on June 8th, three days earlier than the 2016 season, however this timeframe is consistent with historical Preparedness Levels.

On June 17th, the Great Basin's preparedness level was increased to PL 3, approximately two weeks earlier than 2016, in conjunction with a spike in initial attack and resource commitment. We held at PL 3 until July 6th when we changed to PL 4. The Great Basin remained at PL 4 for 37 days, with a brief decline to PL 3 for nine days at the end of July into early August and again for most of August where activity increased into September.

National Preparedness level markers are included on the display below to illustrate how the national situation was fairly consistent with the conditions experienced in the Great Basin.

Year End Totals by Cause

Fire statistics for this report were pulled from the SIT Report. The statistics have not been reconciled with 1202s or FIRESTAT. Great Basin reported 3,126 fires for 2,103,787 acres. 1,987 of those starts were human caused while 1,139 were natural fires. There was an increase in human caused fires during 2017. Historically, 40% of all fires reported are human caused, this season 64% of our total fires were human caused.

Year	Human Caused		Lightning Caused		Totals	
	Fires	Acres	Fires	Acres	Fires	Acres
2017	1,987	788,768	1,139	1,315,019	3,126	2,103,787

Class A - one-fourth acre or less; Class B - more than one-fourth acre, but less than 10 acres; Class C - 10 acres or more, but less than 100 acres; Class D - 100 acres or more, but less than 300 acres; Class E - 300 acres or more, but less than 1,000 acres; Class F - 1,000 acres or more, but less than 5,000 acres; Class G - 5,000 acres or more.								

Summary of Fire Activity by Dispatch Center

Large Fire Occurrence by Month

The first large fire of the year was the Mud Lake incident in Utah County Utah. The Mud Lake fire was a 350 acre human caused fire located 1 mile west of Springville Utah. It started March 15th just about two and a half months earlier than the first large fire of 2016.

The largest fire of the year was the Rooster Comb. The state of Nevada fire, whose cause is unknown, was 25 miles north of Battle Mountain, NV. The fire started on July 9th and was contained/controlled on July 25th at 218,380 acres.

The graph below shows large fire activity by month. The numbers align with the normal pattern for large fire occurrence within the Great Basin. There were a few "late starts" to the typical large fire season during October which lasted anywhere from two to six days.

Fire Activity Map

Large Fire Activity Review

Per the National Mobilization Guide, a large fire is a wildland fire managed for complete perimeter control (Full Suppression) that is 100 acres or larger in timber fuel types and 300 acres or larger in grass or brush fuel types. There are other incidents that require ICS-209s, but the chart below includes only fires that meet the 100+/300+ description and are sorted by start date of the incident.

Prescribed Fire Review

The following statistics display prescribed fires and acres burned by units as reported on the Daily Situation Report within the FAMWEB Program. Only agencies who reported prescribe fires and acres to the FAMWEB Situation Report Program are represented in the chart below. Compared to 2016, there were 23 fewer ignitions, however, the total 47,102 acres burned is above the 5 year average.

Prescribed Acres Completed by State and Agency

Great Basin MAC Group

The Great Basin Multi-Agency Coordinating (MAC) Group was activated from July 8th – August 25th and August 31st - September 11th during the 2017 fire season.

Area Command & National Incident Management Org - NIMO

Great Basin did not host and Area Command Team in 2017, but did host Reinarz for 40 days on the Highline incident on the Payette National Forest and Hahnenberg and Quesinberry's NIMO teams for 27 days on the Bearskin incident on the Boise National Forest.

Type 2 Incident Management Teams

This fire season, the Great Basin Type 2 Incident Management Teams were mobilized to 13 incidents within the GACC and seven incidents out of GACC. In addition, three out of area Type 2 Incident Management Teams were mobilized to four incidents and two preposition incidents within the Great Basin. The initial mobilization for Great Basin was Roide's Team on June 17th to the Brianhead fire in Utah. This was 17 days before the initial mobilization in 2017. The final mobilization for the season was Bird's Team. Bird was assigned to FEMA R2 USVI Hurricane Maria in St. Croix bringing the combined total days on assignment for all of our IMT2s to 283 days. This number is 102 days more than last season.
