Summary Information

The Great Basin Coordination Center (GBCC) is the focal point for coordinating the mobilization of resources for wildland fire, and other incidents throughout the Great Basin Geographic Area. The Great Basin Geographic Area encompasses Utah, Nevada, Idaho (South of the Salmon River), the Western Wyoming Mountains, and the Arizona Strip. GBCC is located in Salt Lake City, UT and provides Intelligence, and Predictive Services related products, for use by the wildland fire community for incident management decision-making.

GBCC Annual Fire Report General Information

GBCC is responsible for compiling fire reports for all *large* wildland fires on lands administered by the following five federal agencies: BLM, BIA, USFS, FWS, NPS, and state agencies. A *large* fire is defined as greater than 100 acres in forest fuel types, and greater than 300 acres in shrub and grass fuel types. Annual figures of total fire starts (regardless of size), and acres burned for individual units are also included.

Statistics used in this report were gathered from the Fire and Aviation Management Web applications (FAMWEB) System (which includes the Situation Report and Incident Status Summary {ICS-209} Programs, and from the Interagency Resource Ordering Capability (IROC). The statistics presented here, are intended to provide a geographic area perspective of annual fire activity and may not reflect official figures for a specific agency.

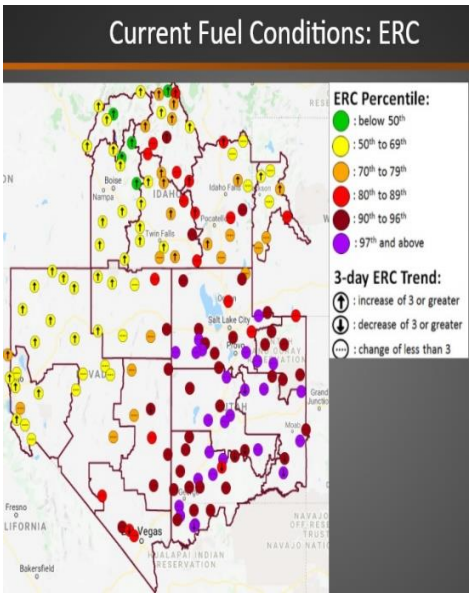
This document, in addition to previous years, is available electronically at the GBCC web page: https://gacc.nifc.gov/gbcc/index.php under the Intelligence link.

Disclaimer: The figures in this report provide general reporting information and overall accuracy cannot be guaranteed. Any determinations, policy, or subsequent reports using this information should be done under consultation with appropriate experts. For agency-specific details or official agency figures, contact the respective agency.

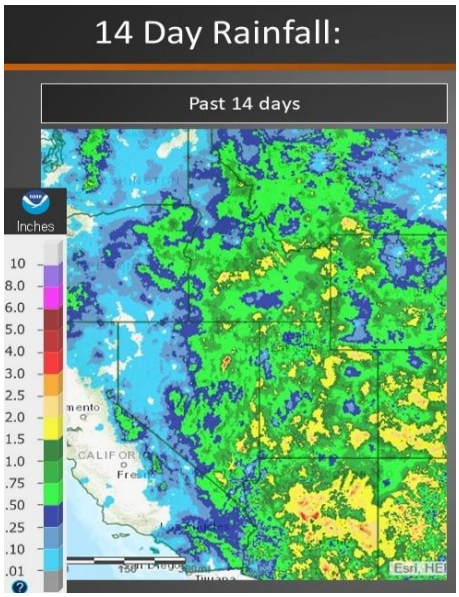
Pine Springs outside of Zion Nation Park and Kolob area, September 2021

Weather 2021: Record Dry Early/Wettest Monsoon in Years

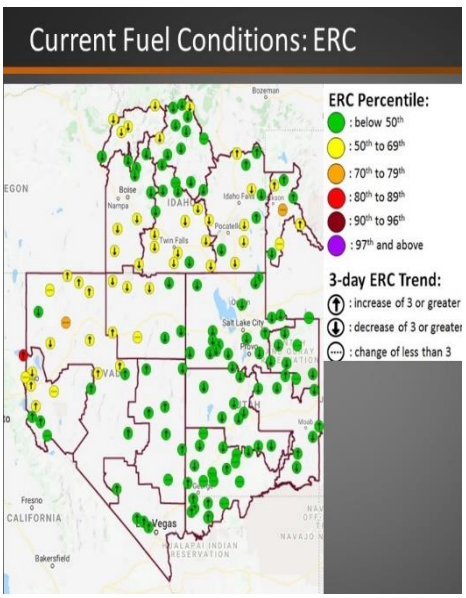
Mid-June Record ERC's UT/AZ



Massive Mid-Summer Monsoon



Post Monsoon Early August ERC's



Notable Weather Events

- The 2021 Fire Season was preceded by an extremely dry spring and winter, with record drought levels across most of Utah and the Arizona Strip, the largest areal coverage of "Extreme" to "Exceptional" drought in the history of the National Drought Monitor.
- Below normal carryover fuel-load existed in most areas…with heavier fuels in the higher elevations being near record dry levels, and the biggest concern, heading into fire season.
- Fire season began two weeks sooner than normal (late May) across southern Utah and the Arizona Strip.
- Several lightning events, followed by dry breezy conditions, increased large fire activity across southern areas significantly in early June.
- By mid-June most stations in Utah and the Arizona Strip were at or beyond the 97th percentiles. Stations in eastern Idaho were also drying out rapidly towards the 90th percentile, and fire activity began to pick up there as well. Mostly "Normal" fuel dryness across Nevada, along with a lack of fine fuels limited large fire activity there.
- By Mid-July critically dry fuels covered nearly the entire Great Basin, with large fires in Utah, Arizona, Nevada and Idaho simultaneously, as the Monsoon was a bit late to develop.
- However, by late July, the Southwest Monsoon rapidly developed, first across southern areas, then pushing unusually far north, into Idaho, Nevada as well, along with a diminishment in fire activity. It was the strongest monsoon in several years, and the wettest across northern areas in over a decade.
- From early August onwards, fire activity never approached the levels of July, but Idaho, Wyoming and especially Western Nevada did dry out, along with occasional large fires.

Fire Summary for the Great Basin

The Great Basin had a below average year for fire occurrence and total acres burned during 2021. There were 2,451 fires reported, burning a combined total acres of 373,226.

		FIRES & ACRES BY STATE & AGENCY

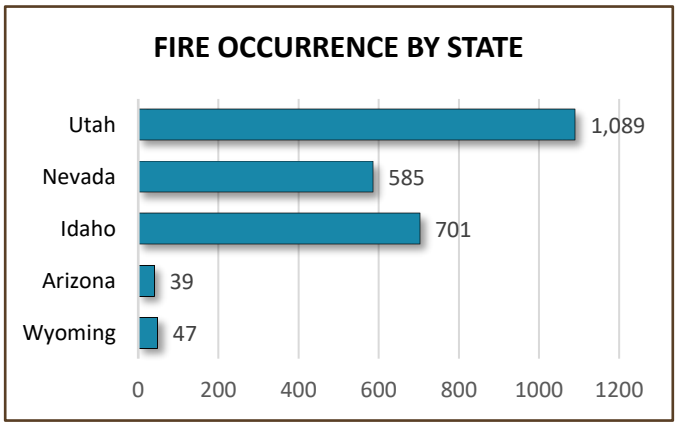
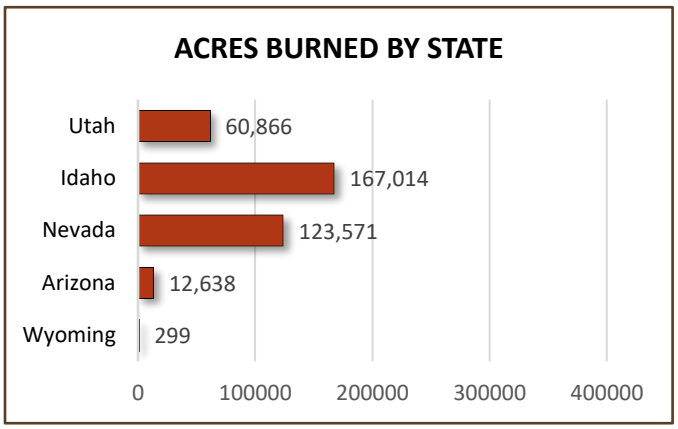
**0 fires for 8,838 acres in CA within Tamarack incident included in NV total acres.*

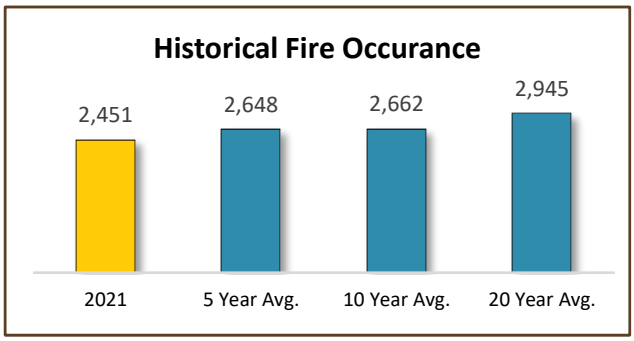


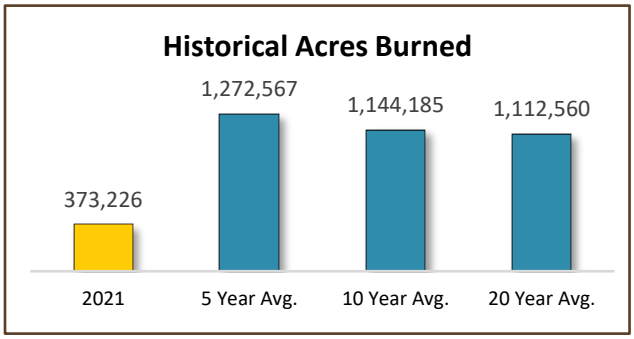


East Fork fire, NV-HTF, July 1, 2021

Great Basin Comparison with Historical Averages

The Great Basin experienced 92% of the 5-year average and 83% of the 20-year average, for ignitions. 2021 fell well below the average of acres burned, burning 29% of the 5-year and 34% of the 20-year averages.



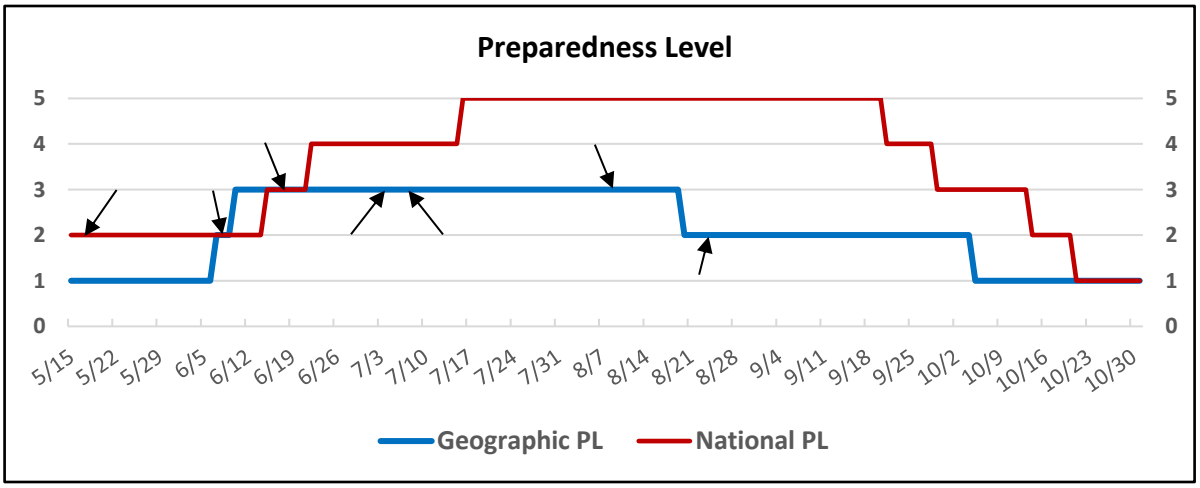


Preparedness Level Review

Great Basin's Preparedness Level was elevated from 1 to 2 on June 7th, approximately two weeks earlier than the 2020 season; this timeframe is average compared to the historical increase from PL 1 to PL 2.

On June 10th, the Great Basin's Preparedness Level increased to PL 3, approximately two and a half weeks earlier than 2020. The increase was in conjunction with a spike in initial attack and resource commitment and also the earliest in five years. The geographic area remained at PL 3 for seventy-one days (until August 20th) when preparedness level returned to PL 2 where it held steady for a month and a half, before returning to PL 1, on October 5th.

National Preparedness level markers are included on the display below to illustrate how the national situation was compared to the conditions experienced within the Great Basin.



Year End Totals by Cause

Fire statistics for this report were pulled from the iNAP SIT Report. The statistics have not been reconciled with 1202s, INFORM, or other final fire reporting systems. Great Basin reported 2,451 fires for 373,226 acres, with 1,354 of those starts were human caused while 1,097 were natural ignitions.

	Human Caused		Lightning Caused		Totals	
Year	Fires	Acres	Fires	Acres	Fires	Acres

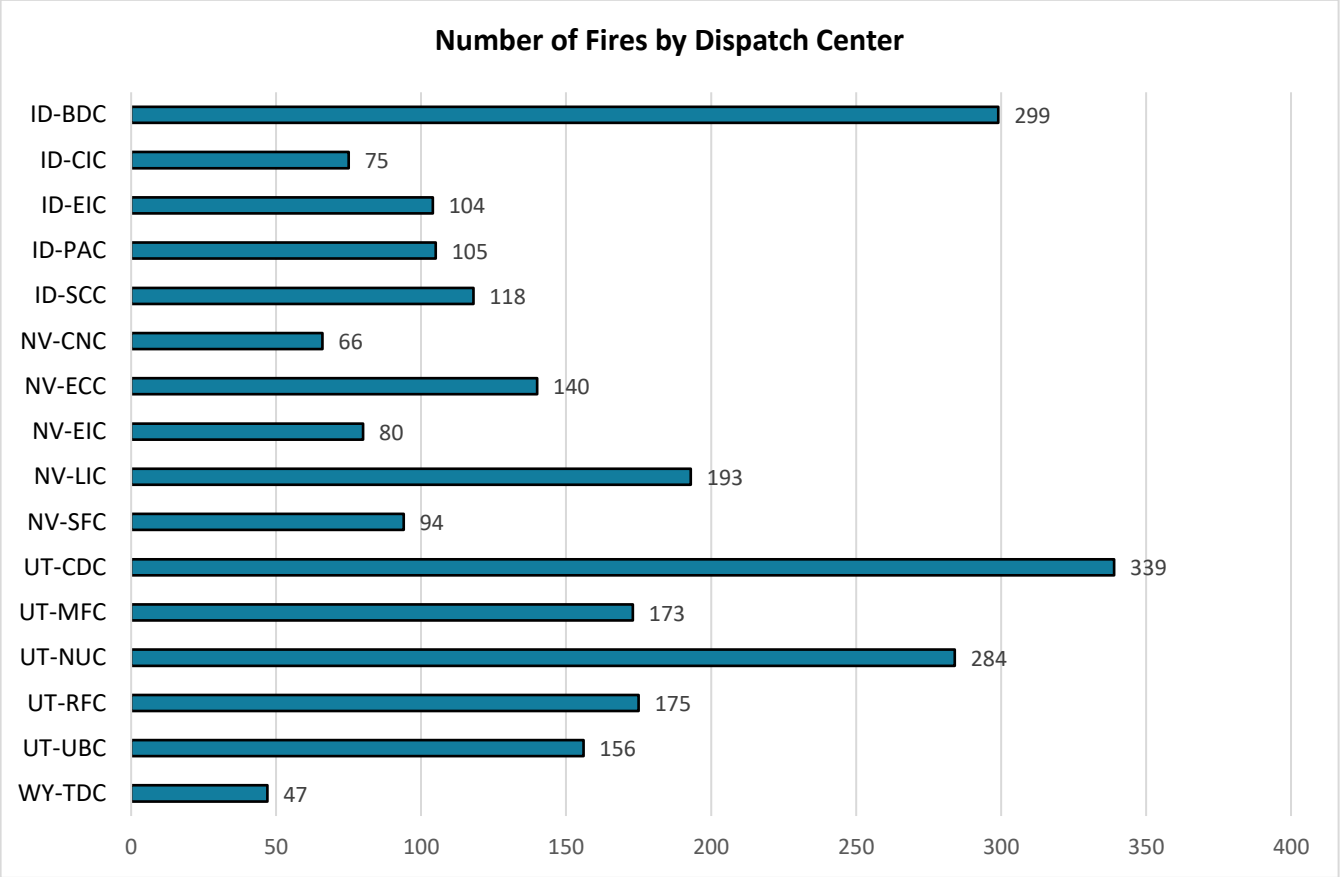
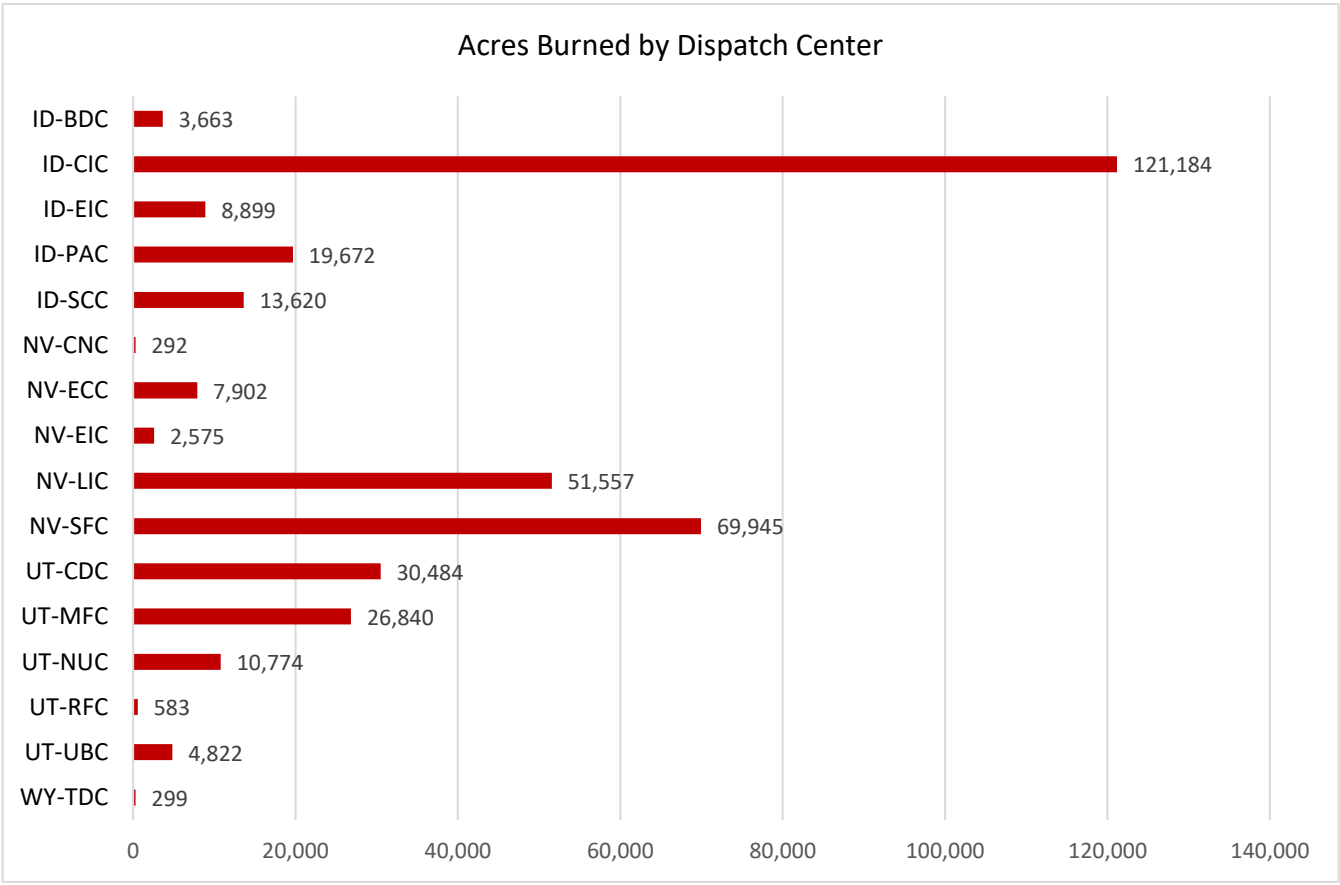
Summary of Fire Activity by Dispatch Center





Large Fire Activity Review

Per the National Mobilization Guide, a large fire is a wildland fire managed for complete perimeter control (Full Suppression), that is 100 acres or larger in timber fuel types, and 300 acres or larger in grass or brush fuel types. There are other incidents that require ICS-209s, but the chart below includes only fires that meet the 100+/300+ criteria and sorted by state and start date of the incident.

Arizona Large Fire Incidents

Unit ID	Name	Start Date	Cause (H/L/U)	Fire Size
AZ-ASD	MM 25 I15	6/24/21	H	1,007
AZ-ASD	Snap Point	7/10/21	L	9,643

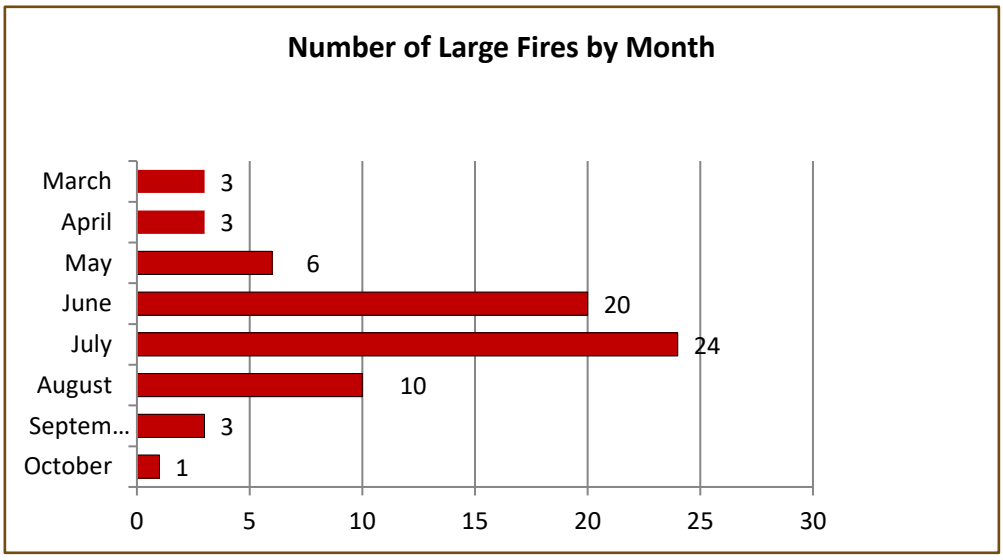
Large Fire Occurrence by Month

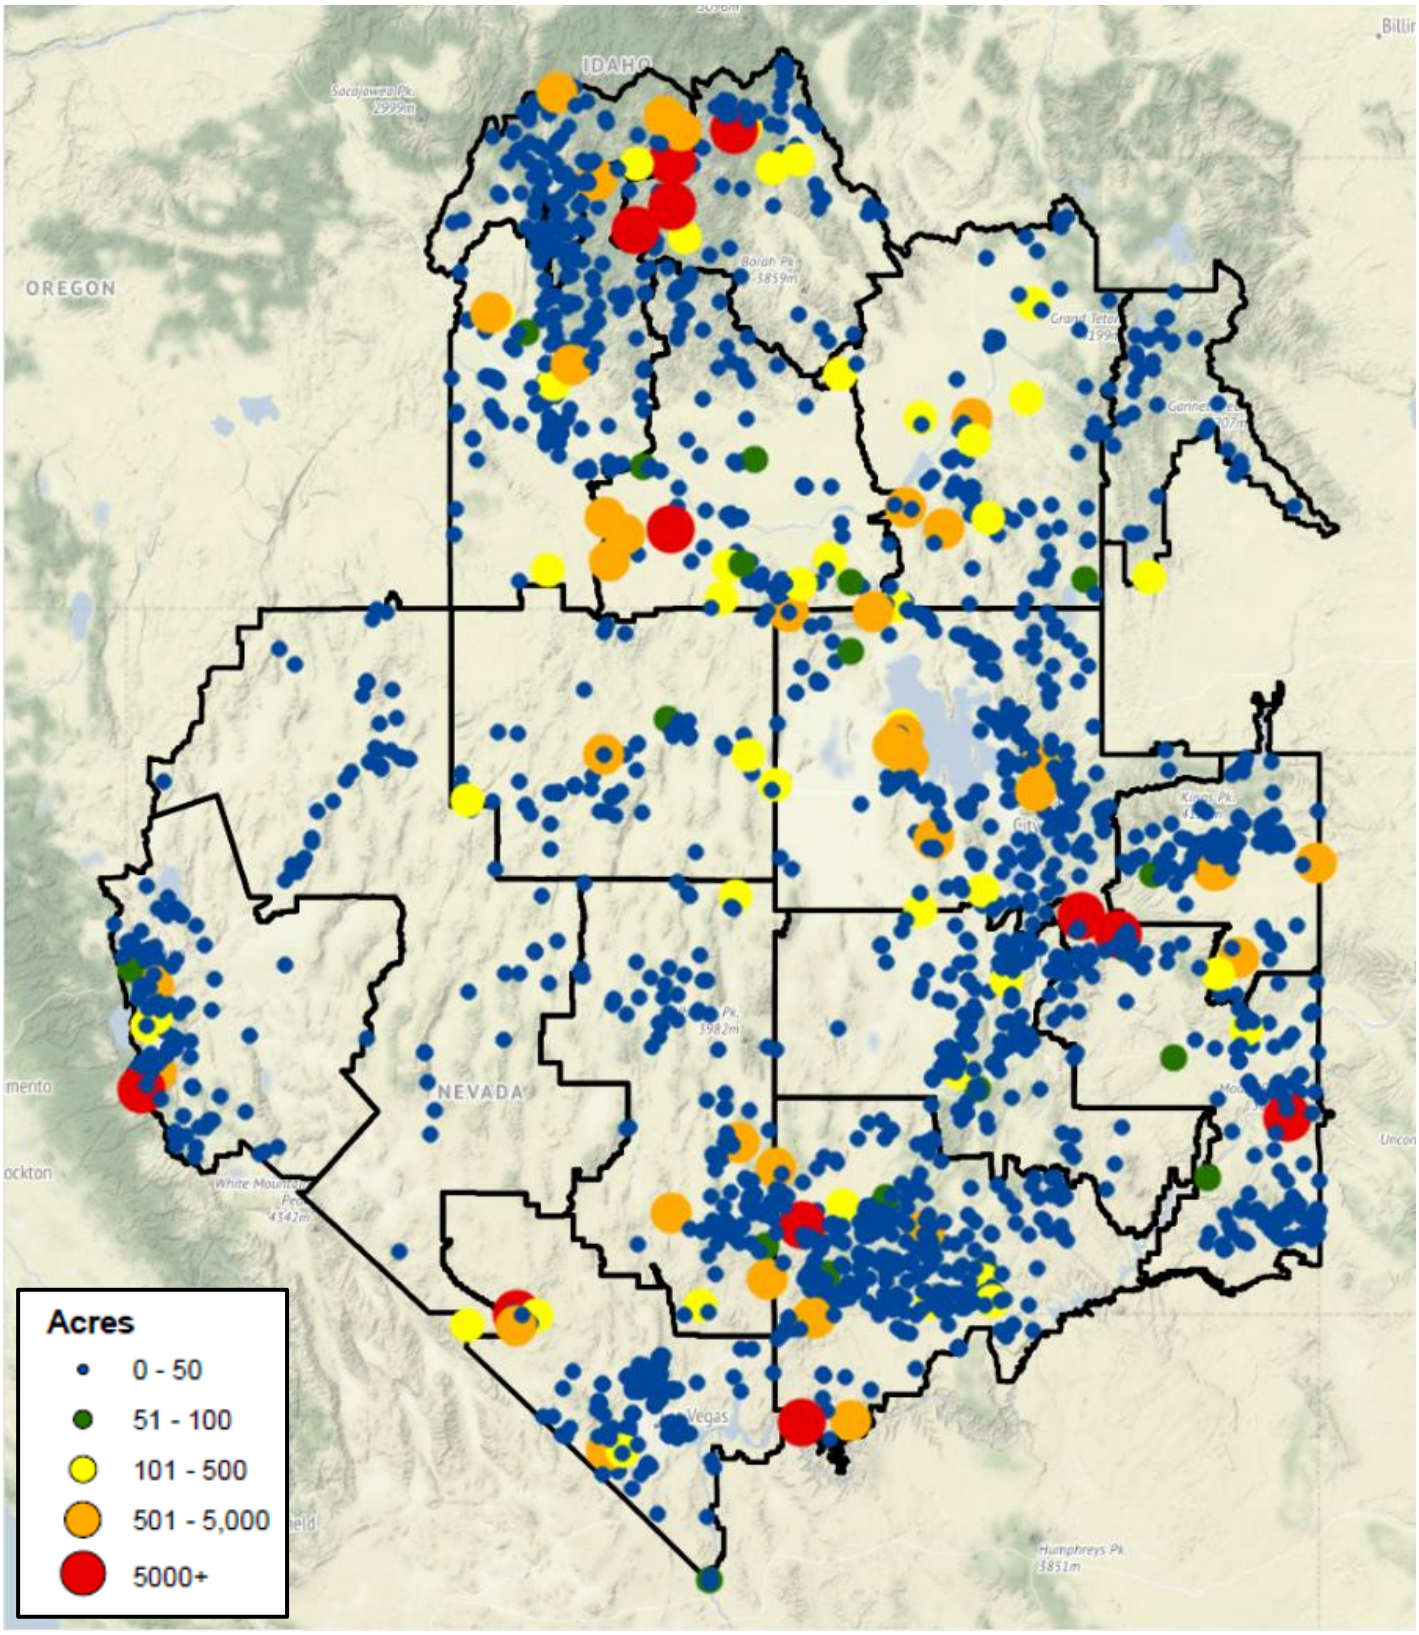
The first large fire of the year was the "Big Rocks incident" on March 8th, in Lincoln County, NV. The Big Rocks was a 4,434 acre unknown caused fire, located twenty miles northeast of Hiko, NV.

The largest fire of the year was the "Boundary incident" on August 10th. The lightning caused US Forest Service, Salmon-Challis Forest fire, was located twenty-four miles northwest of Stanley, ID and burned 88,757 acres. It was contained/controlled on October 28th.

The graph below indicates large fire activity by month. The numbers align with a general pattern for large fire occurrence within the Great Basin. There were a few "early starts" to the typical large fire season during March and April, which persisted anywhere from a couple days to a week.



Fire Activity Map



Prescribed Fire Review

The following statistics display prescribed fires and acres burned by units as reported on the Daily Situation Report within the iNAP Program. Only agencies who reported prescribed fires and acres in the iNAP Situation Report Program are represented in the chart below.

Incident Management Teams (IMT)

Great Basin MAC Group

The Great Basin Multi-Agency Coordinating (MAC) Group wasn't activated during the 2021 fire season.

Area Command & National Incident Management Organization – NIMO

Great Basin did not host an Area Command Team or National Incident Management Organization (NIMO) during 2021.

Type 1 Incident Management Teams

- One of the Great Basin Type 1 IMTs were mobilized within the geographic area to the Mud Lick incident for 14 days.
- Each Great Basin Type 1 IMT were mobilized to FEMA Covid-19 incident for 20 days each.
- Both Great Basin Type 1 IMTs were mobilized to incidents outside of the geographic area to multiple incidents each, for total of 94 days.

Type 2 Incident Management Teams

- Great Basin Type 2 IMTs were committed within the Great Basin for total of 83 days on seven separate incidents. All Type 2 IMTs were mobilized out of GACC for 234 days
    - The initial mobilization for the geographic area was Hicks's Team (on June 6th) to the Mammoth fire in Utah. This was approximately two weeks earlier than the initial mobilization in 2020. The final geographic area mobilization for the season was Hicks/Adell's Team, to the Boundary fire, on September 12th.
    - Additionally, two out of area Type 2 IMTs were mobilized to two incidents within the Great Basin, in June and September, for total of 29 days.
